C660 Little Massingham pavement & drainage maintenance

Works will begin on or soon after 6 January 2020 on C660 Station Road, Little Massingham to improve the surface on the existing path along the section of road between the Paddocks and the former railway station. The path surface will be improved and made wider and a kerb will be added along the side of the path. The existing drainage system will also be improved by adding drains alongside sections of the new kerb. This will help reduce the likelihood of accesses to properties getting flooded during periods of very heavy rain.

The overall project is expected to take 11 weeks. To allow the drainage improvements to be carried out swiftly and safely the road will need to be closed to all through traffic for approximately 3 weeks starting from 17 February 2020.

Vehicular access to properties will be maintained during the works and disruption will be kept to a minimum. Residents are asked to park any cars that are usually parked on the road elsewhere for the duration of the works as this will help to reduce any disruption. The County Council thanks you for your patience while the path and drainage improvements are being carried out.

The work will be carried out by Norfolk County Council’s Community and Environmental Services Department and their contractors.
