Strumpshaw, Chapel Road (C794) – Drainage Maintenance Works

Drainage improvement works will begin on or shortly after Monday 17 February 2020 on the C794 Chapel Roads junction with the C429 Norwich Road in Strumpshaw.

These drainage works are necessary due to pipe damage that causes flooding along Norwich Road. The proposed works will help ease this flooding that occurs during heavy periods of rainfall.

The works will involve excavating two trenches located on Chapel Roads junction with Norwich Road, to fix the existing drainage system that is broken.

To complete the works safely four-way traffic lights will be in place for the duration of the works.

Pedestrians will be able to use the pavements along Chapel Road and Norwich Road as usual.

It is anticipated that these works will take approximately 1 week to complete.

Access to all properties will be maintained during the works. The County Council thanks people for their patience while this drainage improvement work is carried out.

The work will be carried out by Norfolk County Council’s Community and Environmental Services Department and their contractors.
