Broken bridge on footpath FP6 at Trunch - temporarily closed to pedestrians until further notice.

Norfolk County Council carries out regular inspections of all public highways assets including footbridges. Following a recent inspection of the pedestrian timber footbridge on Public Right of Way (PROW) route ‘Trunch-FP6’ we identified a broken structural beam which means that we have to temporarily close the bridge as it is unsafe to use.

Due to the condition of the current bridge a replacement will be required. The replacement bridge is already on the programme of works that will be carried out within this current financial year.

Until the new bridge is in place an alternative route will be available – please see attached map showing the temporary diversion.

The County Council thanks people for their patience while the path is diverted until the new bridge is put in place.
