INTRODUCTION

This document is submitted in relation to the application for a proposed Development Consent Order by Norfolk County Council to the Secretary of State, under the Planning Act 2008.

The application is for the Norfolk County Council (Norwich Northern Distributor Road (A1067 to A47(T))) Order, to grant development consent for the construction of a new highway running west to east, to south, between the A1067 Fakenham Road and the A47 Trunk Road at Postwick, including improvements to the existing highway network to the north and north east of Norwich.

This document comprises part of the application documents and relates to Regulation 5(2)(q) of the Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2009.

1 Introduction

1.1 Introduction to the Applicant and the Application

1.1.1 This document provides information on the Applicant for the Norwich Northern Distributor Road project (the NDR or the Scheme), Norfolk County Council (NCC), on the roles of other planning and highway authorities, and provides an introduction to the form and content of the application for a development consent order (DCO) for the NDR which is made pursuant to section 37 of the Planning Act 2008.

1.1.2 Background information on the DCO application process is also provided.

1.1.3 The Scheme is of national significance pursuant to a direction made by the Secretary of State for Transport under section 35 of the Planning Act 2008 (see further below). NCC is therefore submitting this application for a DCO under the Planning Act 2008. Further information on the DCO consenting process is provided below.

1.2 Scheme Background

1.2.1 As part of the consultation on a revised Norwich Area Transportation Strategy (NATS) undertaken in 2003, the public were asked if they supported a NDR. The consultation indicated strong local support for the NDR with 78% of respondents being in favour.

1.2.2 The overall strategy for the revised NATS was agreed in 2004. It recognised the Norwich Area as a centre where growth would be focussed and therefore the strategy looked to provide the essential infrastructure needed to accommodate this growth, including a Northern Distribution Road.

1.2.3 Further consultations have been carried out on the route and other aspects since the NDR's adoption as a key part of delivering sustainable transport for the Norwich area, including formal pre-application consultation pursuant to the Planning Act 2008. Background to NATS and the NDR consultation is included in the Consultation Report, sections 2.3 and 3 (Document 5.1).

1.3 Proposed Scheme

1.3.1 The Scheme is a dual carriageway all-purpose strategic distributor road, which would link the A1067 Fakenham Road, near Attlebridge, to the A47 Trunk Road at Postwick. This will be over a length of approximately 20.4km. NCC is also seeking consent for other highways improvements and development - a full description of the Scheme can be found in the

Environmental Statement Volume I, Chapter 2 (Document 6.1). Schedule 1 to the Draft Development Consent Order (Document 3.1) sets out the formal description of the Scheme for which consent is sought, which is shown on the plans and drawings submitted with the application, including in particular the Works Plans (Document 2.3).

1.4 Consenting Process

- 1.4.1 Prior to 25 July 2013, the Scheme was within the thresholds in Section 22 of the Planning Act 2008, and was therefore a highways Nationally Significant Infrastructure Project (NSIP) under that section and Section 14(1)(h). On the bringing into force of the Highway and Railway (Nationally Significant Infrastructure Project) Order 2013 on 25 July 2013, the Scheme was no longer a NSIP within the terms of sections 14(1)(h) and 22 of the Planning Act 2008.
- 1.4.2 As noted above in the introduction, the Scheme once again became a scheme for which development consent is required following a direction made by the Secretary of State for Transport under Section 35 of the Planning Act 2008 dated 9 August 2013 (the Section 35 Direction). A copy of NCC's request for a Section 35 direction (dated 25 July 2013) is appended to this document at Appendix B and the Section 35 Direction itself is appended to this document at Appendix C.
- 1.4.3 As the Scheme requires a development consent pursuant to the Planning Act 2008, NCC has carried out pre-application consultation on the Scheme in accordance with Part 5, Chapter 2 of the Planning Act 2008, including the consultation required under Sections 42, 47 and 48 and the notification and other duties under the Planning Act 2008 and applicable Regulations. In addition, NCC had regard to and complied with relevant guidance issued by the Secretary of State and the Planning Inspectorate (PINS) in carrying out its pre-application consultation. The DCO application is accompanied by a Consultation Report (Document 5.1) which fully explains the pre-application consultation carried out, as well as the regard NCC has had to consultation responses in formulating the DCO application for the Scheme.
- 1.4.4 As stated in the Direction, NCC requires a DCO in order to construct the Scheme, and the draft DCO (Document 3.1) also includes powers to operate and maintain it. The Explanatory Memorandum (Document 3.2) sets out further information on the powers and other provisions contained in the draft DCO.

- 1.4.5 Applications for DCOs are made to the Planning Inspectorate, which examines and then reports on the proposals to the relevant Secretary of State. In the case of the NDR, the Planning Inspectorate will examine the Scheme and report to the Secretary of State for Transport, who will then decide whether or not to make the DCO.
- 1.4.6 Further information on the processes that the Planning Inspectorate follows after submission of the DCO application by NCC are provided in section 3 below, and reference should be made to the information available on the Planning Inspectorate's website.

2. The Roles of the Applicant and Other Parties

2.1 Norfolk County Council (the applicant)

2.1.1 The applicant is responsible for operating, maintaining and improving the local highway road network in the County of Norfolk as the local highway authority under the Highways Act 1980 and other relevant statutes. NCC, in its capacity as local highway authority only, is the applicant for this DCO application and throughout this DCO application, the applicant is referred to as either "the applicant" or as "NCC".

2.1.2 The Scheme is managed by the NCC's NNDR project team, whose contact details are:

Northern Distributor Road

Norfolk County Council

Room 321

County Hall

Martineau Lane

Norwich

Norfolk

NR1 2DH

2.1.3 NCC has appointed Mott MacDonald to provide professional services to progress the Scheme. Mott MacDonald's role includes carrying out the Environmental Impact Assessment and traffic modelling, as well as writing various other reports and documents.

2.1.4 NCC has awarded the contract to construct the Scheme to Birse. The contract has been awarded under NCC's Early Contractor Involvement (ECI) initiative, which brings the construction contractor into a project at an early stage of design development to add expertise, value and innovation to on-going design development.

2.2 Other Parties/Authorities

- 2.2.1 The Highways Agency is an Executive Agency of the Department for Transport and is responsible for operating, maintaining and improving the strategic road network in England on behalf of the Secretary of State for Transport. As the A47(T) is a trunk road, the Highways Agency is the highway authority in respect of that highway, not NCC. NCC is however able to seek (and has sought in this application) development consent for works to the A47(T) within the Scheme.
- 2.2.2 As Norfolk County is a 'two tier' local government area, as well as being within NCC's area, the Scheme is also within the administrative area of Broadland District Council, and in respect of very small areas of the Scheme is also within Norwich City Council's administrative area (close to Norwich International Airport) and the Broads Authority's administrative area (at Postwick). These and various other local authorities were involved in NCC's pre-application consultation processes, and will continue to be involved in the examination of the DCO application. Further information on the identity of the relevant local authorities and their involvement in the pre-application consultation processes can be found in the Consultation Report (Document 5.1).

3. The Application

3.1 History to the Scheme's Planning Process

3.1.1 The NDR route is between the A1067 Fakenham Road and the A47(T) at Postwick, and the Scheme includes an altered junction arrangement with the A47(T) and other works and road improvements in this area. NCC has already promoted a scheme which included these works at Postwick. That earlier scheme was the subject of a planning application for a business park along with improvements to the A47/A1042 trunk road junction, for which planning permission was granted by Broadland District Council in October 2011. A further planning permission for an infiltration lagoon and new access track was also granted separately by Broadland District Council.

3.1.2 As the A47 at Postwick is a trunk road, the Highways Agency is responsible for promoting the Side Road and Slip Road Orders relating to the above planning permission. A public inquiry was held in July 2013 to consider the these Orders. It is understood that the Inspector that held the public inquiry has made his recommendations to the Secretary of State for Transport - as yet no decision has been made by the Secretary of State.

3.2 The DCO Application Documents and their Compliance with Legislative Requirements

3.2.1 Table 3.1 below provides a guide to the documents that NCC is submitting as part of this application. As well as providing a list of the main application documents, it also identifies where documents are submitted in order to comply with a relevant legislative or policy requirement.

3.2.2 The legislative requirements for applications for development consent are principally contained in the Planning Act 2008, the Infrastructure Planning (Applications: Prescribed Forms and Procedures) Regulations 2009 (the Application Regulations) and the Infrastructure Planning (Environmental Impact Assessment) Regulations 2009 (the EIA Regulations).

3.2.3 Regulation 5 in the Application Regulations sets out the documents that all development consent applications must include and Regulation 6 sets out the documents that particular types of development consent applications must include – those relating to highways development are relevant to the Scheme. References in Table 3.1 below such as "Reg. 5(2)(b)" are to the Application Regulations and those such as "S.37(3)(c)" are to the Planning Act 2008.

3.2.4 Regulation 5 of the Application Regulations includes a category described as "any other documents considered necessary to support the application" (Reg. 5(2)(q)). Similarly Regulation 5 also allows NCC to submit other plans, drawings and sections which are necessary to describe the Scheme (Reg. 5(2)(o)). The documents provided by NCC and marked as relating to those two paragraphs of the Application Regulations are therefore not statutorily required but are those which NCC considers necessary to support the application for a DCO.

3.2.5 The DCO application submitted for the Scheme complies with the requirements of the Planning Act 2008, the Application Regulations, the EIA Regulations and applicable Secretary of State and PINS guidance including in particular PINS Advice Note 6 (Preparation and submission of application documents, June 2012).

3.3 The DCO Application and Examination Process

- 3.3.1 After NCC has submitted this DCO application, the outline process considering it is as follows.
- 3.3.2 The Planning Inspectorate has 28 days from the date that the application is submitted in which to decide whether to accept it for examination.
- 3.3.3 Following acceptance by the Planning Inspectorate, NCC will carry out its post-acceptance consultation and notification duties. This includes site notice and advertisements in a local newspaper, a national newspaper and the

London Gazette, all confirming certain details including that the DCO application has been accepted and how representations can be made about it, as well as notices to various statutory consultees.

- 3.3.4 The Planning Inspectorate will then appoint one or more 'examining inspectors' (known as the examining authority) to examine the application. The examining authority will consider the application documents and the representations and invite all parties to attend a 'preliminary meeting', setting out what the examining authority considers to be the principal issues relating to the Scheme, and a draft timetable for examining it;
- 3.3.5 At or before the preliminary meeting, participants may make submissions about how the application should be examined. The preliminary meeting does not consider issues of substance relating to the application;
- 3.3.6 Following the preliminary meeting, the examining authority will issue an examination timetable and it is also likely to issue an initial set of written questions. The timetable will give details of deadlines for submitting written representations, commenting on others' representations, answering the examining authorities' questions and commenting on others' answers. Hearings may be scheduled at this point, or these may be programmed at a later time, and further questions and requests for information may be issued by the examining authority. Further information on participating in the examination of the application can be found on the Planning Inspectorate's website including in the Advice Notes it has issued;
- 3.3.7 The examination period (which includes the submission of all written material as well as holding hearings and site visits) starts from the date of the preliminary meeting and must take no more than six months. This can only be extended with the authorisation of the Secretary of State.
- 3.3.8 Following the end of the six month examination period, the examining authority must submit a report to the Secretary of State for Transport within three months, who then has a further three months to determine the application.
- 3.3.9 NCC welcomes correspondence from interested parties in relation to the Scheme - questions relating to the examination process should be directed to the Planning Inspectorate.

INTRODUCTION

This document is submitted in relation to the application for a Development Consent Order by Norfolk County Council to the Secretary of State, under the Planning Act 2008.

The application is for the Norfolk County Council (Norwich Northern Distributor Road (A1067 to A47(T))) Order, to grant development consent for the construction of a new highway running west to east, to south, between the A1067 Fakenham Road and the A47 Trunk Road at Postwick, including improvements to the existing highway network, to the north and north east of Norwich.

This document is the draft Development Consent Order (or draft DCO), comprises part of the application documents and is provided as required under Regulation 5(2)(b) of the Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2009.

Norfolk County Council has also submitted an Explanatory Memorandum (document 3.2), which explains the terms of the draft DCO.

PART 1

PRELIMINARY

1. Citation and commencement
2. Interpretation

PART 2

PRINCIPAL POWERS

3. Development consent etc. granted by the Order
4. Maintenance of authorised development
5. Limits of deviation
6. Benefit of the Order
7. Consent to transfer benefit of the Order

PART 3

STREETS

8. Power to alter layout, etc., of streets
9. Street works
10. Construction and maintenance of new, altered or diverted streets and other structures
11. Classification of roads
12. Stopping up of streets and private accesses
13. Public rights of way
14. Temporary prohibition or restriction of use of streets
15. Access to site during construction
16. Agreements with street authorities

PART 4

SUPPLEMENTAL POWERS

17. Discharge of water
18. Protective work to buildings
19. Authority to survey and investigate the land

PART 5

POWERS OF ACQUISITION

20. Compulsory acquisition of land
21. Compulsory acquisition of land – incorporation of the mineral code
22. Power to override easements and other rights
23. Time limit for exercise of authority to acquire land compulsory
24. Compulsory acquisition of rights
25. Private rights
26. Application of the Compulsory Purchase (Vesting Declarations) Act 1981
27. Acquisition of subsoil only
28. Acquisition of part of certain properties
29. Rights under or over streets
30. Temporary use of land for carrying out the authorised development
31. Temporary use of land for maintaining authorised development
32. Special category land
33. Statutory undertakers
34. Apparatus and rights of statutory undertakers in land acquired or used
35. Recovery of costs of new connections

PART 6

OPERATIONS

36. Felling or lopping of trees
37. Trees subject to tree preservation order

PART 7

MISCELLANEOUS AND GENERAL

38. Application of landlord and tenant law
39. Operational land for purposes of the 1990 Act
40. Defence to proceedings in respect of statutory nuisance
41. Protective Provisions
42. Certification of plans etc.
43. Service of notices
44. Traffic Regulation
45. Prohibition of entry, prohibition of motor vehicles, weight restrictions and speed limits
46. Procedure in relation to certain approvals etc.
47. Arbitration

- SCHEDULE 16 - Trees subject to tree preservation orders

An application has been made to the Secretary of State in accordance with the Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2009 and Part 5 of the 2008 Act for an Order under sections 37, 114, 115, 117(4), 120, 122 and 123 of the 2008 Act.

The application was examined by the Examining authority appointed by the Secretary of State pursuant to Chapter 4 of Part 6 of the 2008 Act.

The Secretary of State is satisfied, in accordance with section 131(3)(a) and section 131(4) of the 2008 Act, that the fuel allotment first replacement land and fuel allotment second replacement land will be given for the fuel allotment land and that such replacement land will vest in the prospective seller and subject to the same rights, trusts and incidents as attach to the fuel allotment land.

The Secretary of State is satisfied –

- (a) in accordance with section 131(3)(a) and section 131(4) of the 2008 Act, that the Marriott's Way replacement open space land will be given for the Marriott's Way open space land and that such replacement land will vest in the prospective seller and subject to the same rights, trusts and incidents as attach to the Marriott's Way open space land; and
- (b) in accordance with section 132(2)(a) and section 132(3) of the 2008 Act, that that part of the Marriott's Way open space land over which rights are to be compulsorily acquired (being plots 2/26, 2/28 and 2/29 in the book of reference and which are so numbered and shown delineated and coloured blue and stippled black on the land plans) when burdened with the Order right and will be no less advantageous than it was before to the following persons –
 - (i) the persons in whom it is vested,
 - (ii) other persons, if any, entitled to rights of common or other rights, and
 - (iii) the public.

The Secretary of State, in accordance with section 105(2) of the 2008 Act, has had regard to the local impact report submitted by [●] and those matters which the Secretary of State thinks are both important and relevant to his decision.

The Secretary of State, having considered the representations made and not withdrawn and the application with the documents that accompanied the application, has determined to make an Order giving effect to the proposals comprised in the application.

The Secretary of State's determination was published on [●].

Accordingly, the Secretary of State, in exercise of the powers conferred by sections 103, 114, 115, 117, 120, 122 and 123 of the 2008 Act, makes the following Order-

PART 1 PRELIMINARY

Citation and commencement

1. This Order may be cited as the Norfolk County Council (Norwich Northern Distributor Road (A1067 to A47(T))) Order 201[●] and shall come into force on [●] 201[●].

Interpretation

2.—(1) In this Order—

“the 1961 Act” means the Land Compensation Act 1961;

“the 1965 Act” means the Compulsory Purchase Act 1965;

“the 1980 Act” means the Highways Act 1980;

“the 1984 Act” means the Road Traffic Regulation Act 1984;

“the 1990 Act” means the Town and Country Planning Act 1990;

“the 1991 Act” means the New Roads and Street Works Act 1991;

“the 2008 Act” means the Planning Act 2008;

"address" includes any number or address used for the purposes of electronic transmission;

“apparatus” has the same meaning as in Part 3 of the 1991 Act;

“authorised development” means the development described in Schedule 1 (authorised development) and any other development authorised by this Order, which is development within the meaning of section 32 of the 2008 Act;

“the book of reference” means the book of reference certified by the Secretary of State as the book of reference for the purposes of this Order;

"bridleway" has the same meaning as in the 1980 Act;

“building” includes any structure or erection or any part of a building, structure or erection;

“carriageway” has the same meaning as in the 1980 Act;

“compulsory acquisition notice” means a notice served in accordance with section 134 of the 2008 Act;

“cycle track” has the same meaning as in the 1980 Act;

“electronic transmission” means a communication transmitted –

(a) by means of an electronic communications network; or

(b) by other means but while in electronic form;

“environmental impact assessment” means the assessment of the environmental impact of the authorised development, the findings of which are recorded in the environmental statement;

“the environmental statement” means the environmental statement submitted under regulation 5(2)(a) of the Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2009 and certified as such by the Secretary of State for the purposes of this Order;

“footpath” and “footway” have the same meaning as in the 1980 Act;

“fuel allotment first replacement land” means that land numbered as plot 10/41 in the book of reference and which is so numbered and shown delineated, and coloured green and stippled black on the land plans;

“fuel allotment land” means that land numbered as plot 10/45 in the book of reference and which is so numbered and shown delineated, and coloured pink and stippled black on the land plan;

“fuel allotment second replacement land” means that land numbered as plot 10/42 in the book of reference and which is so numbered and shown delineated, and hatched orange and green and stippled black on the land plans;

“highway” and “highway authority” have the same meaning as in the 1980 Act;

“the highway classification plans” means the plans certified as the highway classification plans by the Secretary of State for the purposes of this Order;

“the land plan(s)” means the plan(s) certified as the land plan(s) by the Secretary of State for the purposes of this Order;

“the landscaping plans” means the plans certified as the landscaping plans by the Secretary of State for the purposes of this Order;

“limits of deviation” means the limits of deviation for each numbered work shown on the works plans and as set out in article 5;

“maintain” includes inspect, repair, adjust, alter, remove, clear, refurbish, reconstruct and improve, and any derivative of “maintain” is to be construed accordingly;

“Marriott’s Way open space land” means:

(a) plot 2/27 in the book of reference and which is so numbered and shown delineated and hatched pink on the land plans;

(b) plots 2/23, 2/25, 2/34 and 2/37 in the book of reference and which are so numbered and shown delineated and hatched pink and green and stippled black on the land plans; and

(c) plots 2/26, 2/28 and 2/29 in the book of reference and which are so numbered and shown delineated and coloured blue and stippled black on the land plans;

"Marriott's Way replacement open space land" means:

(a) that land numbered as plot 2/27a in the book of reference and which is so numbered and shown delineated and coloured green and stippled black on the land plan;

(b) plots 2/23, 2/25, 2/34 and 2/37 in the book of reference and which are so numbered and shown delineated and hatched pink and green and stippled black on the land plans; and

(c) plots 2/26, 2/28 and 2/29 in the book of reference and which are so numbered and shown delineated and coloured blue and stippled black on the land plans;

"numbered work" means each numbered work comprised in the authorised development and to be located within the corresponding numbered area shown on the works plan and "work number" shall be construed accordingly;

"National Grid" means National Grid plc (Company No. 04031152) whose registered office is at 1-3 Strand, London, WC2N 5EH;

"the NDR classified road" means the highway which the undertaker proposes to construct, as the A1270 Principal Road, as described in Part 2 of Schedule 5 to this Order;

"Network Rail" means Network Rail Limited (Company No. 04402220) whose registered office is at Kings Place, 90 York Way, London, N1 9AG;

"Order land" means the land shown on the land plan(s) which is within the limits of land to be acquired or used permanently or temporarily and described in the book of reference;

"the Order limits" means the limits shown on and described as "The Development Consent Order (DCO) Boundary" on the works plans and within which the authorised development may be carried out;

"owner", in relation to land, has the same meaning as in section 7 of the Acquisition of Land Act 1981;

"relevant planning authority" means the County planning authority for the area in which the land to which the provisions of the Order apply is situated;

"requirements" means those matters set out in Schedule 2 to this Order;

"restricted byway" has the same meaning as in Part 2 of the Countryside and Rights of Way Act 2000;

"Secretary of State" means the Secretary of State for Transport;

"the sections" means the sections shown on the plans certified as the section plans by the Secretary of State for the purposes of this Order;

"statutory undertaker" means any person falling within section 127(8) of the 2008 Act;

"street" means a street within the meaning of section 48 of the 1991 Act, together with land on the verge of a street or between two carriageways, and includes any footpath and "street" includes any part of a street;

"street authority", in relation to a street, has the same meaning as in Part 3 of the 1991 Act;

"the street plans" means the plans certified as the street plans by the Secretary of State for the purposes of this Order;

"tree preservation order" has the meaning given in section 198 of the 1990 Act;

“the tribunal” means the Lands Chamber of the Upper Tribunal;

“trunk road” means a highway which is a trunk road by virtue of—

- (a) section 10 or 19(1) of the 1980 Act; or
- (b) an order or direction under section 10 of the 1980 Act; or
- (c) an order granting development consent; or
- (d) any other enactment;

“undertaker” means the person who has the benefit of this Order in accordance with article 6;

“watercourse” includes all rivers, streams, ditches, drains, canals, cuts, culverts, dykes, sluices, sewers and passages through which water flows except a public sewer or drain; and

“the works plan(s)” means the plan(s) certified as the works plan(s) by the Secretary of State for the purposes of this Order.

(2) References in this Order to rights over land include references to rights to do or to place and maintain anything in, on or under land or in the air-space above its surface.

(3) All distances, directions and lengths referred to in this Order are approximate and distances between points on a work comprised in the authorised development shall be taken to be measured along that work.

(4) All areas described in square metres in the book of reference are approximate.

(5) References in this Order to numbered works are references to the works as numbered in Schedule 1.

(6) References in this Order to points identified by letters or numbers shall be construed as references to points so lettered or numbered on the works plans, the land plans or the street plans (as specified in each case).

(7) The expression "includes" shall be construed without limitation.

PART 2

PRINCIPAL POWERS

Development consent etc. granted by the Order

3.—(1) Subject to the provisions of this Order and to the requirements, the undertaker is granted development consent for the authorised development to be carried out within the Order limits.

(2) Subject to article 5, the numbered works shall be constructed in the lines or in the situations shown on the works plans or within the limits of deviation and, subject to the provision of the requirements, in accordance with the drawings specified in the requirements.

(3) In constructing or maintaining the authorised development, the undertaker may deviate from the lines or situations shown on the works plans within the limits of deviation.

Maintenance of authorised development

4.—(1) Except to the extent that this Order or an agreement made under this Order provides otherwise and subject to the provisions of this Order and to the requirements, the undertaker is authorised to and may at any time maintain the authorised development.

(2) Maintenance shall include, so far as is necessary or expedient for the purposes of, or purposes ancillary to, the construction or operation of the authorised development, carrying out works to alter the position of apparatus below ground level, including mains, sewers, drains and cables including below ground structures associated with that apparatus within the Order limits.

(3) This article only authorises the carrying out of maintenance works within the Order limits.

Limits of deviation

5.—(1) In carrying out the authorised development, the undertaker may deviate vertically and laterally within the limits of deviation specified in paragraphs 2 and 3 below.

(2) Except as provided for specifically in paragraph 3 below, the undertaker may deviate vertically and laterally within the following limits of deviation:

<i>(1)</i> <i>Numbered work</i>	<i>(2)</i> <i>Elements of numbered work to which limits apply</i>	<i>(3)</i> <i>Upwards vertical limit of deviation</i>	<i>(4)</i> <i>Downwards vertical limit of deviation</i>	<i>(5)</i> <i>Horizontal limit of deviation</i>
Work numbers 1 to 24 (inclusive)	Carriageway and adjacent verges, footways, footpaths, bridleways and cycle tracks	Zero	-0.25 metres	Within Order limits
Work numbers 1 to 24 (inclusive)	Earthworks, bunds and banks (and including any associated footways, footpaths, bridleways and cycle tracks)	+0.25 metres	Zero	Within Order limits

(3) The undertaker may deviate vertically within the following limits of deviation:

<i>(1)</i> <i>Numbered work</i>	<i>(2)</i> <i>Elements of numbered work to which limits apply</i>	<i>(3)</i> <i>Vertical limit of deviation</i>
Work numbers 2, 3 and 4	<p>Carriageway and other non carriageway features such as adjacent verges, footways, footpaths, bridleways and cycle tracks in work numbers 2 and 4 that are within 550 metres of the centre point of work number 3(ii) (Fir Covert Roundabout).</p> <p>Carriageway and other non carriageway features such as adjacent verges, footways, footpaths, bridleways and cycle tracks within work number 3.</p> <p>Earthworks, bunds and banks (and including any associated footways, footpaths, bridleways and cycle tracks) in work numbers 2 and 4 that are within 550 metres of the centre point of work number 3(ii).</p> <p>Earthworks, bunds and banks (and including any associated footways, footpaths, bridleways</p>	+ or - 0.5 metres

<i>(1)</i> <i>Numbered work</i>	<i>(2)</i> <i>Elements of numbered work to which limits apply</i>	<i>(3)</i> <i>Vertical limit of deviation</i>
	and cycle tracks) within work number 3.	
Work numbers 4, 5 and 6	<p>Carriageway and other non carriageway features such as adjacent verges, footways, footpaths, bridleways and cycle tracks in work numbers 4 and 6 that is within 250 metres of the centre point of work number 5(ii) (Reepham Round Roundabout).</p> <p>Carriageway and other non carriageway features such as adjacent verges, footways, footpaths, bridleways and cycle tracks within work number 5.</p> <p>Earthworks, bunds and banks (and including any associated footways, footpaths, bridleways and cycle tracks) in work numbers 4 and 6 that are within 250 metres of the centre point of work number 5(ii).</p> <p>Earthworks, bunds and banks (and including any associated footways, footpaths, bridleways and cycle tracks) within work number 5.</p>	+ or - 0.5 metres
Work numbers 6, 7 and 8	<p>Carriageway and other non carriageway features such as adjacent verges, footways, footpaths, bridleways and cycle tracks in work numbers 6 and 8 that is within 250 metres of the centre point of work number 7(ii) (Drayton Lane Roundabout).</p> <p>Carriageway and other non carriageway features such as adjacent verges, footways, footpaths, bridleways and cycle tracks within work number 7.</p> <p>Earthworks, bunds and banks (and including any associated footways, footpaths, bridleways and cycle tracks) in work numbers 6 and 8 that are within 250 metres of the centre point of work number 7(ii).</p> <p>Earthworks, bunds and banks (and including any associated footways, footpaths, bridleways and cycle tracks) within work number 7.</p>	+ or - 0.5 metres
Work numbers 10, 11 and 12	<p>Carriageway and other non carriageway features such as adjacent verges, footways, footpaths, bridleways and cycle tracks in work numbers 10 and 12 that is within 550 metres of the centre point of work number 11(ii) (Airport Roundabout).</p> <p>Carriageway and other non carriageway features such as adjacent verges, footways, footpaths, bridleways and cycle tracks within work number 11.</p> <p>Earthworks, bunds and banks (and including any associated footways, footpaths, bridleways and cycle tracks) in work numbers 10 and 12</p>	+ or - 0.5 metres

<i>(1)</i> <i>Numbered work</i>	<i>(2)</i> <i>Elements of numbered work to which limits apply</i>	<i>(3)</i> <i>Vertical limit of deviation</i>
	<p>that are within 550 metres of the centre point of work number 11(ii).</p> <p>Earthworks, bunds and banks (and including any associated footways, footpaths, bridleways and cycle tracks) within work number 11.</p>	
<p>Work numbers 14, 15 and 16</p>	<p>Carriageway and other non carriageway features such as adjacent verges, footways, footpaths, bridleways and cycle tracks in work numbers 14 and 16 that is within 250 metres of the centre point of work number 15(ii) (Wroxham Road Roundabout).</p> <p>Carriageway and other non carriageway features such as adjacent verges, footways, footpaths, bridleways and cycle tracks within work number 15.</p> <p>Earthworks, bunds and banks (and including any associated footways, footpaths, bridleways and cycle tracks) in work numbers 14 and 16 that are within 250 metres of the centre point of work number 15(ii).</p> <p>Earthworks, bunds and banks (and including any associated footways, footpaths, bridleways and cycle tracks) within work number 15.</p>	<p>+ or - 0.5 metres</p>
<p>Work numbers 16, 17 and 18</p>	<p>Carriageway and other non carriageway features such as adjacent verges, footways, footpaths, bridleways and cycle tracks in work numbers 16 and 18 that is within 250 metres of the centre point of work number 17(ii) (Salhouse Road Roundabout).</p> <p>Carriageway and other non carriageway features such as adjacent verges, footways, footpaths, bridleways and cycle tracks within work number 17.</p> <p>Earthworks, bunds and banks (and including any associated footways, footpaths, bridleways and cycle tracks) in work numbers 16 and 18 that are within 250 metres of the centre point of work number 17(ii).</p> <p>Earthworks, bunds and banks (and including any associated footways, footpaths, bridleways and cycle tracks) within work number 17.</p>	<p>+ or - 0.5 metres</p>
<p>Work number 18</p>	<p>Roundabout circulatory carriageway and other non carriageway features such as adjacent verges, footways, footpaths, bridleways and cycle tracks in work number 18(iii) (Plumstead Road Roundabout North).</p> <p>Carriageway and other non carriageway features such as adjacent verges, footways, footpaths, bridleways and cycle tracks within 120 metres of the centre point of Plumstead</p>	<p>+ or - 0.5 metres</p>

<i>(1)</i> <i>Numbered work</i>	<i>(2)</i> <i>Elements of numbered work to which limits apply</i>	<i>(3)</i> <i>Vertical limit of deviation</i>
	Road Roundabout within work number 18(iii). Earthworks, bunds and banks (and including any associated footways, footpaths, bridleways and cycle tracks) in work number 18 within 120 metres of the centre point of Plumstead Road Roundabout within work number 18(iii).	
Work number 21	Roundabout circulatory carriageway and other non carriageway features such as adjacent verges, footways, footpaths, bridleways and cycle tracks within work number 21(iv) (Postwick North East Roundabout). Carriageway and other non carriageway features such as adjacent verges, footways, footpaths, bridleways and cycle tracks within 135 metres of the centre point of the roundabout within work number 21(iv). Earthworks, bunds and banks (and including any associated footways, footpaths, bridleways and cycle tracks) within work number 21(iv). Earthworks, bunds and banks (and including any associated footways, footpaths, bridleways and cycle tracks) within 135 metres of the centre point of the roundabout within work number 21(iv).	+ or - 0.5 metres

Benefit of the Order

6.—(1) Subject to article 6(2) and article 7 (consent to transfer benefit of the Order), the provisions of this Order shall have effect solely for the benefit of Norfolk County Council.

(2) Paragraph (1) does not apply to numbered works for which consent is granted by this Order for the benefit of statutory undertakers.

Consent to transfer benefit of the Order

7.—(1) The undertaker may—

- (a) transfer to another person (“the transferee”) any or all of the benefit of the provisions of this Order and such related statutory rights as may be agreed in writing between the undertaker and the transferee; or
- (b) grant to another person (“the lessee”) for a period agreed between the undertaker and the lessee any or all of the benefit of the provisions of this Order and such related statutory rights as may be so agreed.

(2) Where an agreement has been made in accordance with paragraph (1) references in this Order to the undertaker, except in paragraph (3), shall include references to the transferee or the lessee.

(3) The exercise by a person of any benefits or rights conferred in accordance with any transfer or grant under paragraph (1) is subject to the same restrictions, liabilities and obligations as would apply under this Order if those benefits or rights were exercised by the undertaker.

(4) The consent of the Secretary of State is required for the exercise of the powers of paragraph (1) except where—

- (a) the transferee or lessee is—
 - (i) a statutory undertaker (including National Grid);
 - (ii) a highway authority responsible for the highways within the Order land;
 - (iv) a person having security over any part of the authorised development in relation to contractual arrangements relating to a contract between the undertaker and a person referred to in sub-paragraph (i);
 - (b) the time limits for claims for compensation in respect of the acquisition of land or effects upon land under this Order have elapsed and—
 - (i) no such claims have been made;
 - (ii) any such claim has been made and has been compromised or withdrawn;
 - (iii) compensation has been paid in final settlement of any such claim;
 - (iv) payment of compensation into court in lieu of settlement of any such claim has taken place; or
 - (v) it has been determined by a tribunal or court of competent jurisdiction in respect of any claim that no compensation shall be payable.
- (5) Where a person who is the transferee or lessee as referred to in paragraph (1)—
- (a) is liable to pay compensation by virtue of any provision of this Order; and
 - (b) fails to discharge that liability.
- the liability is enforceable against the undertaker.

PART 3

STREETS

Power to alter layout, etc., of streets

8.—(1) The undertaker may for the purposes of the authorised development alter the layout of or carry out any works in the street specified in column (1) of Schedule 3 (streets subject to alteration of layout) in the manner specified in relation to that street in column (2).

(2) Regardless of the specific powers conferred by paragraph (1) but subject to paragraph (3), the undertaker may, for the purposes of constructing and maintaining the authorised development, alter the layout of any street within the Order limits and, without limitation on the scope of this paragraph, the undertaker may—

- (a) increase the width of the carriageway of the street by reducing the width of any kerb, footpath, footway, cycle track or verge within the street;
- (b) alter the level or increase the width or any kerb, footway, cycle track or verge;
- (c) reduce the width of the carriageway of the street; and;
- (d) make and maintain passing place.

(3) The undertaker must restore any street that has been temporarily altered under this article to the reasonable satisfaction of the street authority.

(4) The powers conferred by paragraph (2) shall not be exercised without the consent of the street authority.

(5) If a street authority which receives an application for consent under paragraph (4) fails to notify the undertaker of its decision before the end of the period of 28 days beginning with the date on which the application was made, it is deemed to have granted consent.

(6) Paragraphs (3), (4) and (5) shall not apply where the undertaker is the street authority for a street in which the works are being carried out.

Street works

9.—(1) The undertaker may, for the purposes of the authorised development, enter on so much of any of the streets specified in Schedule 4 (streets subject to street works) as is within the Order limits and may—

- (a) break up or open the street, or any sewer, drain or tunnel under it;
- (b) tunnel or bore under the street;
- (c) place apparatus in the street;
- (d) maintain apparatus in the street or change its position; and
- (e) execute any works required for or incidental to any works referred to in sub-paragraphs (a), (b), (c) and (d).

(2) Where the undertaker is not the street authority, the provisions of sections 54 to 106 of the 1991 Act apply to any street works carried out under paragraph (1).

(3) The undertaker shall restore any street that has been temporarily altered under this article to the reasonable satisfaction of the street authority.

(4) The powers conferred by paragraph (1) shall not be exercised without the consent of the street authority, but such consent shall not be unreasonably withheld.

Construction and maintenance of new, altered or diverted streets and other structures

10.—(1) Subject to paragraph (2) and article 11 (classification of roads), the streets authorised to be constructed, altered or diverted under this Order are to be public highways and are to be maintained by and at the expense of the highway authority.

(2) Where a street which is not and is not intended to be a public highway is constructed, altered or diverted under this Order, the street (or part of the street as the case may be) shall, when completed to the reasonable satisfaction of the street authority, unless otherwise agreed, be maintained by and at the expense of the undertaker for a period of 12 months from its completion and at the expiry of that period by and at the expense of the street authority.

(3) In any action against the undertaker in respect of loss or damage resulting from its failure to maintain a street to which paragraph (2) applies, section 58 of the 1980 Act applies as if that street were a highway maintainable at the public expense.

(4) The undertaker shall maintain at its expense the following parts of the authorised development:

- (a) the structure of the bridge over the NDR classified road comprised in work number 4(ii);
- (b) the structure and surface of the bridge over the NDR classified road comprised in work number 6(iii); and
- (c) the structure and surface of the bridge over the NDR classified road comprised in work number 16(vii).

Classification of roads

11.—(1) The roads described in Part 1 of Schedule 5 (classification of roads) (referred to in this article as “the New A47 Trunk Road Postwick Interchange Slip Roads”) shall from the date the undertaker notifies the Secretary of State that they are completed and open for traffic –

- (a) become trunk roads as if they had become so by virtue of an order under section 10(2) of the 1980 Act specifying that date as the date on which they were to become trunk roads; and
- (b) the Secretary of State shall be the highway authority for the New A47 Trunk Road Postwick Interchange Slip Roads.

(2) On the date on which the road described in Part 2 of Schedule 5 is completed and open for traffic it shall be classified as the A1270.

(3) On the date on which the road described in Part 4 of Schedule 5 is completed and open for traffic it shall be classified as the A140.

(4) Each of the roads described in paragraphs (2) and (3) shall, from the respective dates in those paragraphs, be classified -

- (a) as a principal road for the purpose of any enactment or instrument which refers to highways classified as principal roads; and
- (b) as a classified road for the purpose of any enactment or instrument which refers to highways classified as classified roads,

as if such classification had been made under section 12(3) of the 1980 Act.

(5) On the:

- (a) day before the date on which the road described in Part 2 of Schedule 5 is completed and open for traffic, the road described in Part 3 of Schedule 5 shall be removed of its B1149 classified road status and number and shall become an unclassified road; and
- (b) date on which the road described in Part 2 of Schedule 5 is completed and open for traffic, the road described in Part 3 of Schedule 5, shall be classified as the A1270 and will be classified -
 - (i) as a principal road for the purpose of any enactment or instrument which refers to highways classified as principal roads; and
 - (ii) as a classified road for the purpose of any enactment or instrument which refers to highways classified as classified roads,

as if such classification had been made under section 12(3) of the Highways Act 1980.

(6) On the:

- (a) day before the date on which the road described in (a) of Part 5 of Schedule 5 is completed and open for traffic, the road described in (b) of Part 5 of Schedule 5 shall be removed of its C829 classified road status and number and shall become an unclassified road; and
- (b) date on which the road described in (a) of Part 5 of Schedule 5 is completed and open for traffic both it, and the road described in (b) of Part 5 of Schedule 5, shall together be classified as the A1194 and will be classified –
 - (i) as a principal road for the purpose of any enactment or instrument which refers to highways classified as principal roads; and
 - (ii) as a classified road for the purpose of any enactment or instrument which refers to highways classified as classified roads,

as if such classification had been made under section 12(3) of the Highways Act 1980.

Stopping up of streets and private access

12.—(1) Subject to the provisions of this article, the undertaker may, in connection with the carrying out of the authorised development, stop up each of the streets and private access specified in columns (2) and (3) of Parts 1, 2 and 3 of Schedule 6 (streets and private accesses to be stopped up) to the extent specified in column (4) of those Parts of that Schedule.

(2) No street or private accesses specified in columns (2) and (3) of Parts 1 and 2 of Schedule 6 (being a street or private access to be stopped up for which a substitute is to be provided) shall be wholly or partly stopped up under this article unless—

- (a) the new street or private access (as applicable) to be substituted for it, which is specified in column (5) of Parts 1 and 2 of Schedule 6, has been completed to the reasonable satisfaction of the street authority and is open for use; or
- (b) a temporary alternative route for the passage of such traffic as could have used the street or private access (as applicable) to be stopped up is first provided and subsequently maintained by the undertaker, to the reasonable satisfaction of the street authority, between the commencement and termination points for the stopping up of the street or private access (as applicable) until the completion and opening of the new street or private access (as applicable) in accordance with sub-paragraph (a).

(3) No street or private access specified in columns (2) and (3) of Part 3 of Schedule 6 (being a street or private access to be stopped up for which no substitute is to be provided) shall be wholly or partly stopped up under this article unless the condition specified in paragraph (4) is satisfied in relation to all the land which abuts on either side of the street or private access (as applicable) to be stopped up.

(4) The condition referred to in paragraph (3) is that—

- (a) the undertaker is in possession of the land; or
- (b) there is no right of access to the land from the street concerned; or
- (c) there is reasonably convenient access to the land otherwise than from the street or private access concerned; or
- (d) the owners and occupiers of the land have agreed to the stopping up.

(5) Where a street or private access has been stopped up under this article—

- (a) all rights of way over or along the street or private access (as applicable) so stopped up shall be extinguished; and
- (b) the undertaker may appropriate and use for the purposes of the authorised development so much of the site of the street or private access (as applicable) as is bounded on both sides by land owned by the undertaker.

(6) Any person who suffers loss by the suspension or extinguishment of any private right of way under this article shall be entitled to compensation to be determined, in case of dispute, under Part 1 of the 1961 Act.

(7) This article is subject to article 33 (apparatus and rights of statutory undertakers in land acquired or used).

Public rights of way

13. (1) Subject to paragraph (2) the undertaker may in connection with the carrying out of the authorised development stop up the sections of the public rights of way, which are each a section of a restricted byway, described in (a) of Parts 1, 2 and 3 of Schedule 7 (public rights of way) and with effect from the date that each of those sections of the public rights of way described in (a) of Parts 1, 2 and 3 of Schedule 7 are physically stopped up by the undertaker in connection with the carrying out of the authorised development, the public rights of way over each of those sections will be extinguished.

(2) If the undertaker stops up the public rights of way described in (a) of Parts 1, 2 and 3 of Schedule 7, it will construct alternative replacement sections of public rights of way, as described in (b) of Parts 1, 2 and 3 of Schedule 7 and with effect from the date of opening of each alternative replacement

section of public right of way to the public following the completion of the works relating thereto, public rights of way of that same type, namely of a restricted byway, over each of the alternative sections so constructed will be deemed to be created.

Temporary prohibition or restriction of use of streets

14.—(1) The undertaker, during and for the purposes of carrying out the authorised development, may temporarily stop up, alter, divert, prohibit or restrict any street and may for any reasonable time—

- (a) divert the traffic from the street; and
- (b) subject to paragraph (3), prevent all persons from passing along the street.

(2) Without prejudice on the scope of paragraph (1), the undertaker may use any street where the use has been prohibited or restricted under the powers conferred by this article and within the Order limits as a temporary working site.

(3) The undertaker shall provide reasonable access for pedestrians going to or from premises abutting a street affected by the temporary stopping up, alteration, diversion prohibition or restriction of a street under this article if there would otherwise be no such access.

(4) Without prejudice to the generality of paragraph (1), the undertaker may temporarily stop up, alter, divert prohibit or restrict the use of the streets specified in columns (1) and (2) of Schedule 8 (temporary prohibition or restriction of the use of streets) to the extent specified in column (3) of that Schedule.

(5) The undertaker shall not temporarily stop up, alter, divert, prohibit or restrict the use of—

- (a) any street specified in paragraph (4) without first consulting the street authority; and
- (b) any other street without the consent of the street authority which may attach reasonable conditions to any consent.

(6) Any person who suffers loss by the suspension of any private right of way under this article shall be entitled to compensation to be determined, in case of dispute, under Part 1 of the 1961 Act.

(7) If a street authority fails to notify the undertaker of its decision within 28 days of receiving an application for consent under paragraph (5)(b) that street authority shall be deemed to have granted consent.

Access to site during construction

15. The undertaker may, for the purposes of the construction of the authorised development—

- (a) form and lay out means of access, or improve existing means of access, in the location specified in columns (1) and (2) of Schedule 9 (construction access to and from works); and
- (b) with the approval of the relevant planning authority after consultation with the highway authority, form and lay out such other means of access or improve existing means of access, at such locations within the Order limits as the undertaker reasonably requires for the purposes of the authorised development.

Agreements with street authorities

16.—(1) A street authority and the undertaker may enter into agreements with respect to—

- (a) the construction of any new street including any structure carrying the street;
- (b) the strengthening, improvement, repair or reconstruction of any street under the powers conferred by this Order;
- (c) the maintenance of the structure of any bridge or tunnel carrying a street;

- (d) any stopping up, alteration, diversion, prohibition or restriction (in respect of all cases either temporary or permanent) of a street authorised by this Order; or
 - (e) the carrying out in the street of any of the works referred to in article 9(1) (street works).
- (2) Such an agreement may, without prejudice to the generality of paragraph (1)—
- (a) make provision for the street authority to carry out any function under this Order which relates to the street in question;
 - (b) include an agreement between the undertaker and street authority specifying a reasonable time for the completion of the works; and
 - (c) contain such terms as to payment and otherwise as the parties consider appropriate.

PART 4

SUPPLEMENTAL POWERS

Discharge of water

17.—(1) The undertaker may use any watercourse or any public sewer or drain for the drainage of water in connection with the carrying out or maintenance of the authorised development and for that purpose may lay down, take up and alter pipes and may, on any land within the Order limits, make openings into, and connections with, the watercourse, public sewer or drain.

(2) Any dispute arising from the making of connections to or the use of a public sewer or drain by the undertaker pursuant to paragraph (1) shall be determined as if it were a dispute under section 106 of the Water Industry Act 1991 (right to communicate with public sewers).

(3) The undertaker shall not discharge any water into any watercourse, public sewer or drain except with the consent of the person to whom it belongs; and such consent may be given subject to such terms and conditions as that person may reasonably impose but such consent shall not be unreasonably withheld.

(4) The undertaker shall not make any opening into any public sewer or drain except—

- (a) in accordance with plans approved by the person to whom the sewer or drain belongs; and
- (b) where that person has been given the opportunity to supervise the making of the opening.

(5) Except as authorised under this Order, the undertaker shall not, in carrying out or maintaining works, damage or interfere with the bed or banks of any watercourse forming part of a main river.

(6) The undertaker shall take such steps as are reasonably practicable to secure that any water discharged into a watercourse or public sewer or drain pursuant to this article is as free as may be practicable from gravel, soil or other solid substance, oil or matter in suspension.

(7) This article does not authorise the entry into controlled waters of any matter whose entry or discharge into controlled waters is prohibited by section 85(1), (2) or (3) of the Water Resources Act 1991 (offences of polluting water).

(8) In this article—

- (a) “public sewer or drain” means a sewer or drain which belongs to the Homes and Communities Agency, the Environment Agency, a harbour authority within the meaning of section 57 of the Harbours Act 1964 (interpretation), an internal drainage board, a joint planning board, a local authority, a National Park Authority, a sewerage undertaker or an urban development corporation; and
- (b) other expressions, excluding watercourse, used both in this article and in the Water Resources Act 1991 have the same meaning as in that Act.

Protective work to buildings

18.—(1) Subject to the following provisions of this article, the undertaker may at its own expense carry out such protective works to any building lying within the Order limits as the undertaker considers necessary or expedient.

(2) Protective works may be carried out—

- (a) at any time before or during the carrying out in the vicinity of the building of any part of the authorised development; or
- (b) after the completion of that part of the authorised development in the vicinity of the building at any time up to the end of the period of 5 years beginning with the day on which that part of the authorised development is first opened for use.

(3) For the purpose of determining how the functions under this article are to be exercised the undertaker may enter and survey any building falling within paragraph (1) and any land within its curtilage.

(4) For the purpose of carrying out protective works under this article to a building the undertaker may (subject to paragraphs (5) and (6))—

- (a) enter the building and any land within its curtilage; and
- (b) where the works cannot be carried out reasonably conveniently without entering land which is adjacent to the building but outside its curtilage, enter the adjacent land (but not any building erected on it).

(5) Before exercising—

- (a) a right under paragraph (1) to carry out protective works to a building;
- (b) a right under paragraph (3) to enter a building and land within its curtilage;
- (c) a right under paragraph (4)(a) to enter a building and land within its curtilage; or
- (d) a right under paragraph (4)(b) to enter land,

the undertaker shall, except in the case of emergency, serve on the owners and occupiers of the building or land not less than 14 days' notice of its intention to exercise that right and, in a case falling within sub-paragraph (a) or (c), specifying the protective works proposed to be carried out.

(6) Where a notice is served under paragraph (5)(a), (c) or (d), the owner or occupier of the building or land concerned may, by serving a counter-notice within the period of 10 days beginning with the day on which the notice was served, require the question whether it is necessary or expedient to carry out the protective works or to enter the building or land to be referred to arbitration under article 47 (arbitration).

(7) The undertaker shall compensate the owners and occupiers of any building or land in relation to which rights under this article have been exercised for any loss or damage arising to them by reason of the exercise of those rights.

(8) Where—

- (a) protective works are carried out under this article to a building; and
- (b) within the period of 5 years beginning with the day on which the part of the authorised development carried out in the vicinity of the building is first opened for use it appears that the protective works are inadequate to protect the building against damage caused by the carrying out or use of that part of the authorised development,

the undertaker shall compensate the owners and occupiers of the building for any loss or damage sustained by them.

(9) Nothing in this article shall relieve the undertaker from any liability to pay compensation under section 10(2) of the 1965 Act (compensation for injurious affection).

(10) Any compensation payable under paragraph (7) or (8) shall be determined, in case of dispute, under Part 1 of the 1961 Act (determination of questions of disputed compensation).

(11) In this article “protective works” in relation to a building means—

- (a) underpinning, strengthening and any other works the purpose of which is to prevent damage which may be caused to the building by the carrying out, maintenance or use of the authorised development; and
- (b) any works the purpose of which is to remedy any damage which has been caused to the building by the carrying out, maintenance or use of the authorised development.

Authority to survey and investigate the land

19.—(1) The undertaker may for the purposes of this Order enter on any land shown within the Order limits or which may be affected by the authorised development and—

- (a) survey or investigate the land;
- (b) without prejudice to the generality of sub-paragraph (a), make trial holes in such positions on the land as the undertaker thinks fit to investigate the nature of the surface layer and subsoil and remove soil samples;
- (c) without prejudice to the generality of sub-paragraph (a), carry out ecological or archaeological investigations on such land; and
- (d) place on, leave on and remove from the land apparatus for use in connection with the survey and investigation of land and making of trial holes.

(2) No land may be entered or equipment placed or left on or removed from the land under paragraph (1) unless at least 14 days' notice has been served on every owner and occupier of the land.

(3) Any person entering land under this article on behalf of the undertaker—

- (a) shall, if so required entering the land, produce written evidence of their authority to do so; and
- (b) may take with them such vehicles and equipment as are necessary to carry out the survey or investigation or to make the trial holes.

(4) No trial holes shall be made under this article—

- (a) in land located within the highway boundary without the consent of the highway authority; or
- (b) in a private street without the consent of the street authority.

(5) The undertaker shall compensate the owners and occupiers of the land for any loss or damage arising by reason of the exercise of the authority conferred by this article, such compensation to be determined, in case of dispute, under Part 1 (determination of questions of disputed compensation) of the 1961 Act.

PART 5

POWERS OF ACQUISITION

Compulsory acquisition of land

20.—(1) The undertaker may acquire compulsorily so much of the Order land as is required for the authorised development or to facilitate it, or is incidental to it, or is required as replacement land for the special category land referred to in article 32 (special category land) and may use any land so acquired for the purposes authorised by this Order or for any other purposes in connection with or ancillary to the authorised development.

(2) As from the date on which a compulsory acquisition notice under section 134(3) of the 2008 Act is served or the date on which the Order land, or any part of it, is vested in the undertaker, whichever is the later, that land or that part of it which is vested (as the case may be) shall be discharged from all rights, trusts and incidents to which it was previously subject.

(3) Any person who suffers loss by the extinguishment or suspension of any private right of way under this article shall be entitled to compensation to be determined, in case of dispute, under Part 1 of the 1961 Act.

(4) This article is subject to article 24 (compulsory acquisition of rights) and article 30 (temporary use of land for carrying out the authorised development).

Compulsory acquisition of land – incorporation of the mineral code

21. Part(s) 2 and 3 of Schedule 2 to the Acquisition of Land Act 1981 (minerals) are incorporated in this Order subject to the modifications that—

- (a) paragraph 8(3) is not incorporated; and
- (b) for “the acquiring authority” substitute “the undertaker”.

Power to override easements and other rights

22.—(1) Any authorised activity which takes place on land within the Order limits (whether the activity is undertaken by the undertaker or by any of its servants or agents) is authorised by this Order for the purposes of this article if it is authorised by this Order apart from this article and is done in accordance with the terms of this Order, notwithstanding that it involves—

- (a) an interference with an interest or right to which this article applies; or
- (b) a breach of a restriction as to the user of land arising by virtue of a contract.

(2) In this article “authorised activity” means—

- (a) the erection, construction or carrying out, or maintenance of any building or work on land;
- (b) the erection, construction, or maintenance of anything in, on, over or under land; or
- (c) the use of any land.

(3) The interests and rights to which this article applies are any easement, liberty, privilege, right or advantage annexed to land and adversely affecting other land, including any natural right to support and include restrictions as to the user of land arising by the virtue of a contract having that effect.

(4) Where any interest or right to which this article applies is interfered with or any restriction breached by any authorised activity in accordance with the terms of this article the interest or right is extinguished, abrogated, suspended, overridden or discharged at the time that the interference or breach in respect of the authorised activity in question commences.

(5) In respect of any interference, breach, extinguishment, abrogation or discharge in pursuance of this article, compensation—

- (a) is payable under section 7 or 10 of the 1965 Act; and
- (b) is to be assessed in the same manner and subject to the same rules as in the case of other compensation under those sections where—
 - (i) the compensation is to be estimated in connection with a purchase under that Act; or
 - (ii) the injury arises from the execution of works on or use of land acquired under that Act.

(6) Nothing in this article is to be construed as authorising any act or omission on the part of any person which is actionable at the suit of any person on any grounds other than such an interference or breach as is mentioned in paragraph (1).

Time limit for exercise of authority to acquire land compulsorily

23.—(1) After the end of the period of 5 years beginning on the day on which this Order is made—

- (a) no notice to treat shall be served under Part 1 of the 1965 Act; and

- (b) no declaration shall be executed under section 4 of the Compulsory Purchase (Vesting Declarations) Act 1981 as applied by article 26 (application of the Compulsory Purchase (Vesting Declarations) Act 1981).

(2) The authority conferred by article 30 (temporary use of land for carrying out the authorised development) shall cease at the end of the period referred to in paragraph (1), save that nothing in this paragraph shall prevent the undertaker remaining in possession of land after the end of that period, if the land was entered and possession was taken before the end of that period.

Compulsory acquisition of rights

24.—(1) Subject to paragraph (2), the undertaker may acquire compulsorily such rights over the Order land as may be required for any purpose for which that land may be acquired under article 20 (compulsory acquisition of land) by creating them as well as by acquiring rights already in existence.

(2) In the case of the Order land specified in column (1) of Schedule 10 (land in which only new rights etc. may be acquired) the undertaker's powers of compulsory acquisition are limited to the acquisition of such wayleaves, easements or new rights in the land, as may be required for the purpose specified in relation to that land in column (3) of that Schedule.

(3) As from the date on which a compulsory acquisition notice is served or the date on which any new right is vested in the undertaker, whichever is the later, the land over which any new right is acquired shall be discharged from all rights, trusts and incidents to which it was previously subject so far as their continuance would be inconsistent with the exercise of that new right.

(4) Subject to section 8 of the 1965 Act, as substituted by paragraph 5 of Schedule 11 (modification of compensation and compulsory purchase enactments for creation of new rights), where the undertaker acquires a right over land under paragraph (1) or paragraph (2), the undertaker shall not be required to acquire a greater interest in that land.

(5) Schedule 11 shall have effect for the purpose of modifying the enactments relating to compensation and the provisions of the 1965 Act in their application in relation to the compulsory acquisition under this article of a right over land by the creation of a new right.

(6) In any case where the acquisition of new rights under paragraph (1) is required for the purposes of diverting, replacing or protecting the apparatus of a statutory undertaker, the undertaker may, with the consent of the Secretary of State, transfer the power to acquire such rights to the statutory undertaker in question.

(7) The exercise by a statutory undertaker of any power in accordance with a transfer under paragraph (6) shall be subject to the same restrictions, liabilities and obligations as would apply under this Order if that power were exercised by the undertaker.

Private rights

25.—(1) Subject to the provisions of this article, all private rights over land subject to compulsory acquisition under this Order shall be extinguished—

- (a) as from the date of acquisition of the land by the undertaker, whether compulsorily or by agreement; or
- (b) on the date of entry on the land by the undertaker under section 11(1) of the 1965 Act (power of entry),

whichever is the earliest.

(2) Subject to the provisions of this article, all private rights over land subject to the compulsory acquisition of rights under this Order shall be extinguished in so far as their continuance would be inconsistent with the exercise of the right—

- (a) as from the date of acquisition of the right by the undertaker, whether compulsorily or by agreement; or

- (b) on the date of entry on the land by the undertaker under section 11(1) of the 1965 Act (power of entry) in pursuance of the right,

whichever is the earliest.

(3) Subject to the provisions of this article, all private rights over land owned by the undertaker shall be extinguished on commencement of any activity authorised by this Order which interferes with or breaches such rights.

(4) Subject to the provisions of this article, all private right over land of which the undertaker takes temporary possession under this Order shall be suspended and unenforceable for as long as the undertaker remains in lawful possession of the land.

(5) Any person who suffers loss by the extinguishment or suspension of any private right of way under this article shall be entitled to compensation to be determined, in case of dispute, under Part 1 of the 1961 Act.

(6) This article does not apply in relation to any right to which section 138 of the 2008 Act (extinguishment of rights, and removal of apparatus, of statutory undertakers etc.) or article 33 (statutory undertakers) applies.

(7) Paragraphs (1) to (3) shall have effect subject to—

- (a) any notice given by the undertaker before—

- (i) the completion of the acquisition of the land or the acquisition of rights over land,
- (ii) the undertaker's appropriation of it,
- (iii) the undertaker's entry onto it, or
- (iv) the undertaker's taking temporary possession of it,

that any or all of those paragraphs shall not apply to any right of way specified in the notice; and

- (b) any agreement made at any time between the undertaker and the person in or to whom the right of way in question is vested or belongs.

(8) If any such agreement as is referred to in paragraph (7)(b)—

- (a) is made with a person in or to whom the right of way is vested or belongs; and
- (b) is expressed to have effect also for the benefit of those deriving title from or under that person,

it shall be effective in respect of the persons so deriving title, whether the title was derived before or after the making of the agreement.

(9) Reference in this article to private rights over land includes reference to any trusts or incidents to which the land is subject.

Application of the Compulsory Purchase (Vesting Declarations) Act 1981

26.—(1) The Compulsory Purchase (Vesting Declarations) Act 1981 shall apply as if this Order were a compulsory purchase order.

(2) The Compulsory Purchase (Vesting Declarations) Act 1981, as so applied, shall have effect with the following modifications.

(3) In section 3 (preliminary notices), for subsection (1) there shall be substituted—

“(1) Before making a declaration under section 4 with respect to any land which is subject to a compulsory purchase order, the acquiring authority shall include the particulars specified in subsection (3) in a notice which is—

- (a) given to every person with a relevant interest in the land with respect to which the declaration is to be made (other than a mortgagee who is not in possession); and

(b) published in a local newspaper circulating in the area in which the land is situated.”.

(4) In that section, in subsection (2), for ““(1)(b)”” there shall be substituted ““(1)”” and after ““given”” there shall be inserted ““and published””.

(5) In that section, for subsections (5) and (6) there shall be substituted—

“(5) For the purposes of this section, a person has a relevant interest in land if—

(a) that person is for the time being entitled to dispose of the fee simple of the land, whether in possession or in reversion; or

(b) that person holds, or is entitled to the rents and profits of, the land under a lease or agreement, the unexpired term of which exceeds one month.”.

(6) In section 5 (earliest date for execution of declaration)—

(a) in subsection (1), after ““publication”” there shall be inserted ““in a local newspaper circulating in the area in which the land is situated””; and

(b) subsection (2) shall be omitted.

(7) In section 7 (constructive notice to treat), in subsection (1)(a), the words ““(as modified by section 4 of the Acquisition of Land Act 1981)”” shall be omitted.

(8) References to the 1965 Act in the Compulsory Purchase (Vesting Declarations) Act 1981 shall be construed as references to that Act as applied by section 125 of the 2008 Act to the compulsory acquisition of land under this Order.

Acquisition of subsoil only

27.—(1) The undertaker may acquire compulsorily so much of, or such rights in, the subsoil of the land referred to in paragraph (1) of article 20 (compulsory acquisition of land) as may be required for any purpose for which that land may be acquired under that provision instead of acquiring the whole of the land.

(2) Where the undertaker acquires any part of, or rights in, the subsoil of land under paragraph (1), the undertaker shall not be required to acquire an interest in any other part of the land.

(3) Paragraph (2) shall not prevent article 28 (acquisition of part of certain properties) from applying where the undertaker acquires a cellar, vault, arch or other construction forming part of a house, building or manufactory.

Acquisition of part of certain properties

28.—(1) This article shall apply instead of section 8(1) of the 1965 Act (other provisions as to divided land) (as applied by section 125 of the 2008 Act) where—

(a) a notice to treat is served on a person (“the owner”) under the 1965 Act (as so applied) in respect of land forming only part of a house, building or manufactory or of land consisting of a house with a park or garden (“the land subject to the notice to treat”); and

(b) a copy of this article is served on the owner with the notice to treat.

(2) In such a case, the owner may, within the period of 21 days beginning with the day on which the notice was served, serve on the undertaker a counter-notice objecting to the sale of the land subject to the notice to treat which states that the owner is willing and able to sell the whole (“the land subject to the counter-notice”).

(3) If no such counter-notice is served within that period, the owner shall be required to sell the land subject to the notice to treat.

(4) If such a counter-notice is served within that period, the question whether the owner shall be required to sell only the land subject to the notice to treat shall, unless the undertaker agrees to take the land subject to the counter-notice, be referred to the tribunal.

(5) If on such a reference the tribunal determines that the land subject to the notice to treat can be taken—

- (a) without material detriment to the remainder of the land subject to the counter-notice; or
- (b) where the land subject to the notice to treat consists of a house with a park or garden, without material detriment to the remainder of the land subject to the counter-notice and without seriously affecting the amenity and convenience of the house,

the owner shall be required to sell the land subject to the notice to treat.

(6) If on such a reference the tribunal determines that only part of the land subject to the notice to treat can be taken—

- (a) without material detriment to the remainder of the land subject to the counter-notice; or
- (b) where the land subject to the notice to treat consists of a house with a park or garden, without material detriment to the remainder of the land subject to the counter-notice and without seriously affecting the amenity and convenience of the house,

the notice to treat shall be deemed to be a notice to treat for that part.

(7) If on such a reference the tribunal determines that—

- (a) the land subject to the notice to treat cannot be taken without material detriment to the remainder of the land subject to the counter-notice; but
- (b) the material detriment is confined to a part of the land subject to the counter-notice,

the notice to treat shall be deemed to be a notice to treat for the land to which the material detriment is confined in addition to the land already subject to the notice, whether or not the additional land is land which the undertaker is authorised to acquire compulsorily under this Order.

(8) If the undertaker agrees to take the land subject to the counter-notice, or if the tribunal determines that—

- (a) none of the land subject to the notice to treat can be taken without material detriment to the remainder of the land subject to the counter-notice or, as the case may be, without material detriment to the remainder of the land subject to the counter-notice and without seriously affecting the amenity and convenience of the house; and
- (b) the material detriment is not confined to a part of the land subject to the counter-notice,

the notice to treat shall be deemed to be a notice to treat for the land subject to the counter-notice whether or not the whole of that land is land which the undertaker is authorised to acquire compulsorily under this Order.

(9) Where, by reason of a determination by the tribunal under this article, a notice to treat is deemed to be a notice to treat for less land or more land than that specified in the notice, the undertaker may, within the period of 6 weeks beginning with the day on which the determination is made, withdraw the notice to treat; and, in that event, shall pay the owner compensation for any loss or expense occasioned to the owner by the giving and withdrawal of the notice, to be determined in case of dispute by the tribunal.

(10) Where the owner is required under this article to sell only part of a house, building or manufactory or of land consisting of a house with a park or garden, the undertaker shall pay the owner compensation for any loss sustained by the owner due to the severance of that part in addition to the value of the interest acquired.

Rights under or over streets

29.—(1) The undertaker may enter upon and appropriate so much of the subsoil of, or air-space over, any street within the Order limits as may be required for the purposes of the authorised development and may use the subsoil or air-space for those purposes or any other purpose ancillary to the authorised development.

(2) Subject to paragraph (3), the undertaker may exercise any power conferred by paragraph (1) in relation to a street without being required to acquire any part of the street or any easement or right in the street.

(3) Paragraph (2) shall not apply in relation to—

- (a) any subway or underground building; or
- (b) any cellar, vault, arch or other construction in, on or under a street which forms part of a building fronting onto the street.

(4) Subject to paragraph (5), any person who is an owner or occupier of land in respect of which the power of appropriation conferred by paragraph (1) is exercised without the undertaker acquiring any part of that person's interest in the land, and who suffers loss by the exercise of that power, shall be entitled to compensation to be determined, in case of dispute, under Part 1 of the 1961 Act.

(5) Compensation shall not be payable under paragraph (4) to any person who is an undertaker to whom section 85 of the 1991 Act (sharing cost of necessary measures) applies in respect of measures of which the allowable costs are to be borne in accordance with that section.

Temporary use of land for carrying out the authorised development

30.—(1) The undertaker may, in connection with the carrying out of the authorised development—

- (a) enter on and take temporary possession of the land specified in columns (1) and (2) of Schedule 12 (land of which temporary possession may be taken) for the purpose specified in relation to that land in column (4) of that Schedule relating to the part of the authorised development specified in column (5) of that Schedule;
- (b) remove any buildings and vegetation from that land; and
- (c) construct temporary works (including the provision of means of access) and buildings on that land.

(2) Not less than 14 days before entering on and taking temporary possession of land under this article the undertaker shall serve notice of the intended entry on the owners and occupiers of the land.

(3) The undertaker may not, without the agreement of the owners of the land, remain in possession of any land under this article in the case of land specified in paragraph (1)(a)(i), after the end of the period of one year beginning with the date of completion of the part of the authorised development specified in relation to that land in column (4) of Schedule 12.

(4) Before giving up possession of land of which temporary possession has been taken under this article, the undertaker shall remove all temporary works and restore the land to the reasonable satisfaction of the owners of the land; but the undertaker shall not be required to replace a building removed under this article.

(5) The undertaker shall pay compensation to the owners and occupiers of land of which temporary possession is taken under this article for any loss or damage arising from the exercise in relation to the land of the provisions of any power conferred by this article.

(6) Any dispute as to a person's entitlement to compensation under paragraph (5), or as to the amount of the compensation, shall be determined under Part 1 of the 1961 Act.

(7) Nothing in this article shall affect any liability to pay compensation under section 10(2) of the 1965 Act (further provisions as to compensation for injurious affection) or under any other enactment in respect of loss or damage arising from the carrying out of the authorised development, other than loss or damage for which compensation is payable under paragraph (5).

(8) The undertaker may not compulsorily acquire under this Order the land referred to in paragraph (1) except that the undertaker shall not be precluded from—

- (a) acquiring new rights over any part of that land under article 24 (compulsory acquisition of rights); or

- (b) acquiring any part of the subsoil (or rights in the subsoil) of that land under article 27 (acquisition of subsoil only).

(9) Where the undertaker takes possession of land under this article, the undertaker shall not be required to acquire the land or any interest in it.

(10) Section 13 of the 1965 Act (refusal to give possession to acquiring authority) shall apply to the temporary use of land pursuant to this article to the same extent as it applies to the compulsory acquisition of land under this Order by virtue of section 125 of the 2008 Act (application of compulsory acquisition provisions).

(11) Nothing in this article shall prevent the taking of temporary possession more than once in relation to any land specified in Schedule 12.

Temporary use of land for maintaining authorised development

31.—(1) Subject to paragraph (2), at any time during the maintenance period relating to any part of the authorised development, the undertaker may—

- (a) enter on and take temporary possession of any land within the Order limits if such possession is reasonably required for the purpose of maintaining the authorised development; and
- (b) construct such temporary works (including the provision of means of access) and buildings on the land as may be reasonably necessary for that purpose.

(2) Paragraph (1) shall not authorise the undertaker to take temporary possession of—

- (a) any house or garden belonging to a house; or
- (b) any building (other than a house) if it is for the time being occupied.

(3) Not less than 28 days before entering on and taking temporary possession of land under this article the undertaker shall serve notice of the intended entry on the owners and occupiers of the land.

(4) The undertaker may only remain in possession of land under this article for so long as may be reasonably necessary to carry out the maintenance of the part of the authorised development for which possession of the land was taken.

(5) Before giving up possession of land of which temporary possession has been taken under this article, the undertaker shall remove all temporary works and restore the land to the reasonable satisfaction of the owners of the land.

(6) The undertaker shall pay compensation to the owners and occupiers of land of which temporary possession is taken under this article for any loss or damage arising from the exercise in relation to the land of the provisions of this article.

(7) Any dispute as to a person's entitlement to compensation under paragraph (6), or as to the amount of the compensation, shall be determined under Part 1 of the 1961 Act.

(8) Nothing in this article shall affect any liability to pay compensation under section 10(2) of the 1965 Act (further provisions as to compensation for injurious affection) or under any other enactment in respect of loss or damage arising from the maintenance of the authorised development, other than loss or damage for which compensation is payable under paragraph (6).

(9) Where the undertaker takes possession of land under this article, the undertaker shall not be required to acquire the land or any interest in it.

(10) Section 13 of the 1965 Act (refusal to give possession to acquiring authority) shall apply to the temporary use of land pursuant to this article to the same extent as it applies to the compulsory acquisition of land under this Order by virtue of section 125 of the 2008 Act (application of compulsory acquisition provisions).

(11) In this article “the maintenance period”, in relation to any part of the authorised development, means the period of 5 years beginning with the date on which that part of the authorised development is first opened for use.

Special Category Land

32.—(1) On the giving of notice by the undertaker to the relevant planning authority pursuant to this paragraph and subject to the undertaker having first complied with paragraph (1) of requirement 24 (Alternative Route for Marriott's Way), the Marriott's Way open space land shall vest in the undertaker and shall be discharged from all rights, trusts and incidents to which it was previously subject.

(2) Prior to the opening of the NDR classified road for public use the undertaker must obtain certification from the relevant planning authority that a scheme for the provision of the Marriott's Way replacement open space land as open space has been implemented to its satisfaction, and on the provision of such certificate the Marriott's Way replacement open space land shall vest in the persons in whom the Marriott's Way open space land was vested immediately before it was vested in the undertaker and shall be subject to the same rights, trusts and incidents as attached to the Marriott's Way open space land.

(3) The fuel allotment land shall not vest in the undertaker until the undertaker has acquired the fuel allotment first replacement land and the relevant planning authority has certified that a scheme for the provision of the fuel allotment first replacement land as fuel allotment land has been implemented to its satisfaction.

(4) On the requirement of paragraph (3) being satisfied, the fuel allotment first replacement land shall vest in the persons in whom the fuel allotment land was vested immediately before it was vested in the undertaker and shall be subject to the same rights, trusts and incidents as attached to the fuel allotment land, and the fuel allotment land shall be discharged from all rights, trusts and incidents to which it was previously subject.

(5) On the giving of notice by the undertaker to the relevant planning authority pursuant to this paragraph, such notice to be given no later than the date that is three months after the date of the opening of the NDR classified road for public use, the fuel allotment second replacement land shall vest in the persons in whom the fuel allotment land was vested immediately before it was vested in the undertaker and shall be subject to the same rights, trusts and incidents as attached to the fuel allotment land.

Statutory undertakers

33.—Subject to the provisions of Schedule 13 (Protective provisions), the undertaker may—

- (a) acquire compulsorily the land belonging to statutory undertakers shown on the land plan(s) within the limits of the land to be acquired and described in the book of reference;
- (b) extinguish the rights of, remove or reposition the apparatus belonging to statutory undertakers shown on the land plan and described in the book of reference; and
- (c) acquire compulsorily the new rights over land belonging to statutory undertakers shown on the land plan and described in the book of reference.

Apparatus and rights of statutory undertakers in land acquired or used

34.—(1) Where a street is stopped up under article 12 (stopping up of streets and private accesses) any statutory utility whose apparatus is under, in, on, along or across the street shall have the same powers and rights in respect of that apparatus, subject to the provisions of this article, as if this Order had not been made.

(2) Where a street is stopped up under article 12 (stopping up of streets and private accesses) any statutory utility whose apparatus is under, in, on, over, along or across the street may, and if reasonably requested to do so by the undertaker shall—

- (a) remove the apparatus and place it or other apparatus provided in substitution for it in such other position as the utility may reasonably determine and have power to place it; or

- (b) provide other apparatus in substitution for the existing apparatus and place it in such position as described in sub-paragraph (a).

(3) Subject to the following provisions of this article, the undertaker shall pay to any statutory utility an amount equal to the cost reasonably incurred by the utility in or in connection with—

- (a) the execution of the relocation works required in consequence of the stopping up of the street; and
- (b) the doing of any other work or thing rendered necessary by the execution of the relocation works.

(4) If in the course of the execution of relocation works under paragraph (2)—

- (a) apparatus of a better type, of greater capacity or of greater dimensions is placed in substitution for existing apparatus; or
- (b) apparatus (whether existing apparatus or apparatus substituted for existing apparatus) is placed at a depth greater than the depth at which the existing apparatus was;

and the placing of apparatus of that type or capacity or of those dimensions or the placing of apparatus at that depth, as the case may be, is not agreed by the undertaker, or, in default of agreement, is not determined by arbitration to be necessary, then, if it involves cost in the execution of the relocation work exceeding that which would have been involved if the apparatus placed had been of the existing type, capacity or dimensions, or at the existing depth, as the case may be, the amount which, apart from this paragraph, would be payable to the statutory utility by virtue of paragraph (3) shall be reduced by the amount of that excess.

(5) For the purposes of paragraph (4) -

- (a) an extension of apparatus to a length greater than the length of existing apparatus shall not be treated as a placing of apparatus of greater dimensions than those of the existing apparatus; and
- (b) where the provision of a joint in a cable is agreed, or is determined to be necessary, the consequential provision of a jointing chamber or of a manhole shall be treated as if it also had been agreed or had been so determined.

(6) An amount which, apart from this paragraph, would be payable to a statutory utility in respect of works by virtue of paragraph (3) (and having regard, where relevant, to paragraph (4)) shall, if the works include the placing of apparatus provided in substitution for apparatus placed more than 7 years and 6 months earlier so as to confer on the utility any financial benefit by deferment of the time for renewal of the apparatus in the ordinary course, be reduced by the amount which represents that benefit.

(7) Paragraphs (3) to (6) shall not apply where the authorised development constitutes major highway works, major bridge works or major transport works for the purposes of Part 3 of the 1991 Act, but instead—

- (a) the allowable costs of the relocation works shall be determined in accordance with section 85 of that Act (sharing of cost of necessary measures) and any regulations for the time being having effect under that section; and
- (b) the allowable costs shall be borne by the undertaker and the statutory utility in such proportions as may be prescribed by any such regulations.

(8) In this article –

“apparatus” has the same meaning as in Part 3 of the 1991 Act;

“relocation works” means work executed, or apparatus provided, under paragraph (2); and

“statutory utility” means a statutory undertaker for the purposes of the 1980 Act or a public communications provider as defined in section 151(1) of the Communications Act 2003.

Recovery of costs of new connections

35.—(1) Where any apparatus of a public utility undertaker or of a public communications provider is removed under article 33 (statutory undertakers) any person who is the owner or occupier of premises to which a supply was given from that apparatus shall be entitled to recover from the undertaker compensation in respect of expenditure reasonably incurred by that person, in consequence of the removal, for the purpose of effecting a connection between the premises and any other apparatus from which a supply is given.

(2) Paragraph (1) shall not apply in the case of the removal of a public sewer but where such a sewer is removed under article 33 (statutory undertakers) any person who is—

- (a) the owner or occupier of premises the drains of which communicated with the sewer; or
- (b) the owner of a private sewer which communicated with that sewer,

shall be entitled to recover from the undertaker compensation in respect of expenditure reasonably incurred by that person, in consequence of the removal, for the purpose of making the drain or sewer belonging to that person communicate with any other public sewer or with a private sewerage disposal plant.

(3) This article shall not have effect in relation to apparatus to which article 34 (apparatus and rights of statutory undertakers in land acquired or used) or part 3 of the 1991 Act applies.

(4) In this paragraph –

“public communications provider” has the same meaning as in section 151(1) of the Communications Act 2003; and

“public utility undertaker” has the same meaning as in the 1980 Act.

PART 6 OPERATIONS

Felling or lopping of trees

36.—(1) The undertaker may fell or lop any tree or shrub near within or overhanging any part of the authorised development, or cut back its roots, and may enter onto any land to carry out such felling or lopping, if it reasonably believes it to be necessary to do so to prevent the tree or shrub—

- (a) from obstructing or interfering with the construction, maintenance or operation of the authorised development or any apparatus used in connection with the authorised development; or
- (b) from constituting a danger to other persons using the development.

(2) In carrying out any activity authorised by paragraph (1), the undertaker shall do no unnecessary damage to any tree or shrub and shall pay compensation to any person for any loss or damage arising from such activity.

(3) Any dispute as to a person's entitlement to compensation under paragraph (2), or as to the amount of compensation, shall be determined under Part 1 of the 1961 Act.

Trees subject to tree preservation order

37.—(1) The undertaker may fell or lop any tree described in Schedule 16 (trees subject to tree preservation orders) and identified on the environmental context plans, cut back its roots or undertake such other works described in column (3) of that Schedule if it reasonably believes it to be necessary in order to do so to prevent the tree or shrub—

(a) from obstructing or interfering with the construction, maintenance or operation of the authorised development or any apparatus used in connection with the authorised development; or

(b) from constituting a danger to persons using the authorised development.

(2) In carrying out any activity authorised by paragraph (1)—

(a) the undertaker must not cause unnecessary damage to any tree or shrub and must pay compensation to any person for any loss or damage arising from such activity; and

(b) the duty imposed by section 206(1) of the 1990 Act (replacement of trees) does not apply.

(3) The authority given by paragraph (1) constitutes a deemed consent under the relevant tree preservation order.

(4) Any dispute as to a person's entitlement to compensation under paragraph (2), or as to the amount of compensation, is to be determined under Part 1 of the 1961 Act.

PART 7

MISCELLANEOUS AND GENERAL

Application of landlord and tenant law

38.—(1) This article applies to—

(a) any agreement for leasing to any person the whole or any part of the authorised development or the right to operate the same; and

(b) any agreement entered into by the undertaker with any person for the construction, maintenance, use or operation of the authorised development, or any part of it,

so far as any such agreement relates to the terms on which any land which is the subject of a lease granted by or under that agreement is to be provided for that person's use.

(2) No enactment or rule of law regulating the rights and obligations of landlords and tenants shall prejudice the operation of any agreement to which this article applies.

(3) Accordingly, no such enactment or rule of law shall apply in relation to the rights and obligations of the parties to any lease granted by or under any such agreement so as to—

(a) exclude or in any respect modify any of the rights and obligations of those parties under the terms of the lease, whether with respect to the termination of the tenancy or any other matter;

(b) confer or impose on any such party any right or obligation arising out of or connected with anything done or omitted on or in relation to land which is the subject of the lease, in addition to any such right or obligation provided for by the terms of the lease; or

(c) restrict the enforcement (whether by action for damages or otherwise) by any party to the lease of any obligation of any other party under the lease.

Operational land for purposes of the 1990 Act

39. Development consent granted by this Order shall be treated as specific planning permission for the purposes of section 264(3)(a) of the 1990 Act (cases in which land is to be treated as operational land for the purposes of that Act).

Defence to proceedings in respect of statutory nuisance

40.—(1) Where proceedings are brought under section 82(1) of the Environmental Protection Act 1990 (summary proceedings by persons aggrieved by statutory nuisances) in relation to a nuisance falling within paragraph (g) of section 79(1) of that Act (noise emitted from premises so as to be prejudicial to health or a nuisance) no order shall be made, and no fine may be imposed, under section 82(2) of that Act if—

- (a) the defendant shows that the nuisance—
 - (i) relates to premises used by the undertaker for the purposes of or in connection with the construction or maintenance of the authorised development and that the nuisance is attributable to the carrying out of the authorised development in accordance with a notice served under section 60 (control of noise on construction sites), or a consent given under section 61 (prior consent for work on construction sites) or 65 (noise exceeding registered level), of the Control of Pollution Act 1974; or
 - (ii) is a consequence of the construction or maintenance of the authorised development and that it cannot reasonably be avoided; or
- (b) the defendant shows that the nuisance is a consequence of the use of the authorised development and that it cannot reasonably be avoided.

(2) Section 61(9) (consent for work on construction site to include statement that it does not of itself constitute a defence to proceedings under section 82 of the Environmental Protection Act 1990) of the Control of Pollution Act 1974 and section 65(8) of that Act (corresponding provision in relation to consent for registered noise level to be exceeded), shall not apply where the consent relates to the use of premises by the undertaker for the purposes of or in connection with the construction or maintenance of the authorised development.

Protective Provisions

41. Schedule 13 (protective provisions) has effect.

Certification of plans etc

42.—(1) The undertaker shall, as soon as practicable after the making of this Order, submit to the Secretary of State copies of—

- (a) the book of reference;
- (b) the land plan(s);
- (c) the works plan(s);
- (d) the landscaping plans;
- (e) the street plans;
- (f) the general arrangement drawings;
- (g) the sections;
- (h) the highway classification plan;
- (i) the environmental statement; and
- (j) any other plans or documents referred to in this Order.

for certification that they are true copies of the documents referred to in this Order.

(2) A plan or document so certified shall be admissible in any proceedings as evidence of the contents of the document of which it is a copy.

Service of notices

43.—(1) A notice or other document required or authorised to be served for the purposes of this Order may be served—

- (a) by post;
- (b) by delivering it to the person on whom it is to be served or to whom it is to be given or supplied; or
- (c) with the consent of the recipient and subject to paragraphs (6) to (8), by electronic transmission.

(2) Where the person on whom a notice or other document to be served for the purposes of this Order is a body corporate, the notice or document is duly served if it is served on the secretary or clerk of that body.

(3) For the purposes of section 7 of the Interpretation Act 1978 as it applies for the purposes of this article, the proper address of any person in relation to the service on that person of a notice or document under paragraph (1) is, if that person has given an address for service, that address and otherwise—

- (a) in the case of the secretary or clerk of that body corporate, the registered or principal office of that body, and,
- (b) in any other case, the last known address of that person at that time of service.

(4) Where for the purposes of this Order a notice or other document is required or authorised to be served on a person as having an interest in, or as the occupier of, land and the name or address of that person cannot be ascertained after reasonable enquiry, the notice may be served by—

- (a) addressing it to that person by the description of "owner", or as the case maybe "occupier" of the land (describing it) and
- (b) either leaving it in the hands of the person who is or appears to be resident or employed on the land or leaving it conspicuously affixed to some building or object on or near the land

(5) Where a notice or other document required to be served or sent for the purposes of this Order is served or sent by electronic transmission the requirement shall be taken to be fulfilled only where—

- (a) the recipient of the notice or other document to be transmitted has given consent to the use of electronic transmission in writing or by electronic transmission;
- (b) the notice or document is capable of being accessed by the recipient;
- (c) the notice or document is legible in all material respects; and
- (d) in a form sufficiently permanent to be used for subsequent reference.

(6) Where the recipient of a notice or other document served or sent by electronic transmission notifies the sender within seven days of receipt that the recipient requires a paper copy of all or any part of that notice or other document the sender must provide such a copy as soon as reasonably practicable.

(7) Any consent to the use of an electronic transmission by a person may be revoked by that person in accordance with paragraph (8).

(8) Where a person is no longer willing to accept the use of electronic transmission for any other purposes of this Order—

- (a) that person must give notice in writing or by electronic transmission revoking any consent given by that person for that purpose; and
- (b) such revocation is final and takes effect on a date specified by the person in the notice but that date must not be less than 7 days after the date on which the notice is given.

(9) This article does not exclude the employment of any method of service not expressly provided for by it.

(10) In this article "electronic transmission" means a communication transmitted—

- (a) by means of electronic communications network; or
- (b) by other means but while in electronic form.

Traffic Regulation

44.—(1) Subject to the provisions of this article, and the consent of the traffic authority in whose area the road concerned is situated, the undertaker may, for the purposes of the authorised development—

- (a) revoke, amend or suspend in whole or in part any order made, or having effect as if made, under the 1984 Act;
- (b) permit, prohibit or restrict the stopping, waiting, loading or unloading of vehicles on any road;
- (c) authorise the use as a parking place of any road;
- (d) make provision as to the direction or priority of vehicular traffic on any road; and
- (e) permit or prohibit vehicular access to any road;

either at all times or at times, on days or during such periods as may be specified by the undertaker.

(2) The power conferred by paragraph (1) may be exercised at any time prior to the expiry of 12 months from the opening of the authorised development for public use but subject to paragraph (6) any prohibition, restriction or other provision made under paragraph (1) may have effect both before and after the expiry of that period.

(3) The undertaker must consult the chief officer of police and the traffic authority in whose area the road is situated before complying with the provisions of paragraph (4).

(4) The undertaker must not exercise the power conferred by paragraph (1) unless it has—

- (a) given not less than—
 - (i) 12 weeks' notice in writing of its intention so to do in the case of a prohibition, restriction or other provision intended to have effect permanently; or
 - (ii) 4 weeks' notice in writing of its intention so to do in the case of a prohibition, restriction or other provision intended to have effect temporarily,

to the chief officer of police and to the traffic authority in whose area the road is situated; and

- (b) advertised its intention in such manner as the traffic authority may specify in writing within 28 days of its receipt of notice of the undertaker's intention in the case of sub-paragraph (a)(i), or within 7 days of its receipt of notice of the undertaker's intention in the case of sub-paragraph (a)(ii).

(5) Any prohibition, restriction or other provision made by the promoter under paragraph (1) will—

- (a) have effect as if duly made by, as the case may be—
 - (i) the traffic authority in whose area the road is situated, as a traffic regulation order under the 1984 Act; or
 - (ii) the local authority in whose area the road is situated, as an order under section 32 of the 1984 Act,

and the instrument by which it is effected may specify savings and exemptions to which the prohibition, restriction or other provision is subject; and

- (b) be deemed to be a traffic order for the purposes of Schedule 7 to the Traffic Management Act 2004 (road traffic contraventions subject to civil enforcement).

(6) Any prohibition, restriction or other provision made under this article may be suspended, varied or revoked by the undertaker from time to time by subsequent exercise of the powers of paragraph (1) within a period of 24 months from the opening of the authorised development.

(7) Before exercising the powers of paragraph (1) the promoter must consult such persons as it considers necessary and appropriate and take into consideration any representations made to it by any such person.

(8) Expressions used in this article and in the 1984 Act shall have the same meaning in this article as in that Act.

(9) The powers conferred on the undertaker by this article with respect to any road have effect subject to any agreement entered into by the undertaker with any person with an interest in (or who undertakes activities in relation to) premises served by the road.

Prohibition of entry, prohibition of motor vehicles, weight restrictions and speed limits

45.—(1) Upon completion of the relevant part of the authorised development—

- (a) No person shall drive any motor vehicle along the lengths of roads identified in part 1 of Schedule 14 at a speed exceeding that specified in relation to that length of road;
- (b) The traffic regulation measures identified in part 2 of Schedule 14 (Speed limits and traffic regulation measures) shall apply in relation to the lengths of road specified;
- (c) The traffic orders imposing speed limits identified in part 3 of Schedule 14 shall be revoked or varied (as appropriate) so that they cease to apply to the lengths of road specified in the second column;
- (d) The traffic regulation orders imposing weight restrictions identified in Part 4 of Schedule 14 shall be varied so that they only apply to the lengths of road specified in the fourth column.

(2) No speed limit imposed by this Order applies to vehicles falling within regulation 3(4) of the Road Traffic Exemptions (Special Forces) (Variation and Amendment) Regulations 2011 when used in accordance with regulation 3(5) of those Regulations.

Procedure in relation to certain approvals etc

46.—(1) Where an application is made to or request is made of the relevant planning authority, a highway authority, a traffic authority, a street authority, railway undertaker, tramway undertaker, navigation authority or the owner of a watercourse, sewer or drain for any consent, agreement or approval required or contemplated by any of the provisions of the Order or any requirement, such consent, agreement or approval shall, if given, be given in writing and shall not be unreasonably withheld.

(2) Save for applications made pursuant to Schedule 15 (Procedure for discharge of requirements) and except as provided for in paragraph (3), if, within 28 days after the application or request has been submitted to a railway undertaker, a tramway undertaker, an authority or an owner as referred to in paragraph (1) of this article, it has not notified the undertaker of its disapproval and the grounds of disapproval, it shall be deemed to have approved the application or request.

(3) Paragraph (2) shall not apply to any application or request which is accompanied by a report which concludes that it is likely that the subject matter of such application or request will give rise to any materially new or materially different environmental effects in comparison with the authorised development as approved.

(4) Schedule 15 shall have effect in relation to all consents, agreements or approvals granted, refused or withheld in relation to requirements.

Arbitration

47. Any difference under any provision of this Order, unless otherwise provided for, is to be referred to and settled by a single arbitrator to be agreed between the parties or, failing agreement, to be appointed on the application of either party (after giving notice in writing to the other) by the Secretary of State.

SCHEDULE 1
AUTHORISED DEVELOPMENT

In the County of Norfolk and—

in respect of the whole of Work Nos. 1 to 10, 12 to 20 and 22 to 24, and in respect of part of Work Nos. 11 and 21, in the District of Broadland; and

in respect of part of Work No. 11 only, in the City of Norwich; and

in respect of part of Work No. 21 only, in the administrative area of the Broads Authority

a development which, pursuant to a direction made by the Secretary of State on 9th August 2013 under section 35 of the 2008 Act, is development for which development consent is required, comprising:

Work No .1

- 1(i) as part of the improvement of the A1067 Fakenham Road, the construction of a roundabout junction on the A1067 Fakenham Road (known as ‘Fakenham Road Roundabout’), as the westernmost connection of the, dual carriageway, NDR classified road, including the construction of a footway/cycleway, running concentrically from the eastern tie-in of the improvement with the existing A1067 Fakenham Road, around the south and north west arcs of the Fakenham Road Roundabout, together with the realignment, north eastwards, of those lengths of the A1067 Fakenham Road carriageway and verges which extend 760 metres north west, and 140 metres south east, of the Fakenham Road Roundabout, and of the reconfiguration of a further 125 metres of the south westerly verge of the A1067 Fakenham Road, extending south eastwards from the south easterly termination point of the aforementioned works;
 - 1(ii) the construction of a 50 metres length of the, dual carriageway, NDR classified road, extending north eastwards from the Fakenham Road Roundabout;
 - 1(iii) drainage works, earthworks, pavement works, kerbing and paved area works, signing and road marking works, safety barrier works, fencing works, landscaping works and other works integral to or otherwise incidental to the improvement of the A1067 Fakenham Road, to the construction of the Fakenham Road Roundabout, or to the construction of this length of the NDR classified road, described in this Work No. 1;
 - 1(iv) the creation of grassland areas to the north and south sides of the realigned A1067 Fakenham Road carriageway; and
 - 1(v) the creation of grassland and woodland areas to the north west of the Fakenham Road Roundabout,
- all within the area identified as Work No. 1 on the Works Plan Sheet 1 of 12.

Work No. 2

- 2(i) the construction of a 1,040 metres continuing length of the, dual carriageway, NDR classified road, from that length of the NDR classified road described in 1(ii) above, extending north eastwards, then eastwards, towards the Fir Covert Road Roundabout;
- 2(ii) the construction of a combined private means of access and diverted restricted byway route (for Attlebridge Restricted Byway No.3), extending east north-eastwards, then north westwards, for 315 metres, from the Fakenham Road Roundabout, to rejoin the existing Attlebridge Restricted Byway No. 3;
- 2(iii) the construction of a length of bridleway, running alongside the north side of the NDR classified road, from the junction with Attlebridge Restricted Byway No.3, north eastwards (to junction with a continuing length or bridleway described in 3(v) below), such bridleway to be combined with a private means of access for its first 150 metres westerly length, and the construction of a diverging length of private means of access only, from that easterly end point of the combined route, north eastwards for 100 metres;
- 2(iv) drainage works, earthworks, pavement works, kerbing and paved area works, signing and road marking works, safety barrier works, fencing works, landscaping works and other works

integral to or otherwise incidental to the construction of this length of the NDR classified road, or of the construction of other streets and private means of access, described in this Work No. 2;

- 2(v) the construction of 1 drainage lagoon (No.1), and access thereto, to the east of the Fakenham Road Roundabout;
- 2(vi) the construction of 1 drainage lagoon (No.1A), and access thereto, to the north east of the Fakenham Road Roundabout;
- 2(vii) the construction of 1 drainage lagoon (No.2), and access thereto, to the north west of the Fir Covert Road Roundabout;
- 2(viii) the diversion of some 540 metres of National Grid gas transmission pipeline, so that it crosses the NDR classified road at some 90 degrees rather than at an oblique angle;
- 2(ix) the creation of grassland and woodland areas on the north side of the Fakenham Road Roundabout; and
- 2(x) the creation of grassland and woodland areas on the north and south sides of this length of the NDR classified road,

all within the area identified as Work No. 2 on the Works Plan Sheet 1 of 12 and Sheet 2 of 12.

Work No. 3

- 3(i) the construction of a 50 metres length of the, dual carriageway, NDR classified road, from that length of the NDR classified road described in 2(i) above, extending eastwards to the Fir Covert Road Roundabout;
- 3(ii) the construction of a roundabout junction as part of the NDR classified road, on and to connect with the C262 Fir Covert Road (known as 'Fir Covert Road Roundabout'), including the construction of a footway/cycleway around the south west and north west arcs of the Fir Covert Road Roundabout, leading to crossing points on the north and south arms of the C262 Fir Covert Road;
- 3(iii) the construction of a 50 metres length of the, dual carriageway, NDR classified road, extending eastwards from the Fir Covert Road Roundabout;
- 3(iv) the improvement of the C262 Fir Covert Road, by widening on its east and west sides, on its immediate southerly and northerly approaches to the Fir Covert Road Roundabout;
- 3(v) the construction of a continuing length of bridleway (extending from that length of bridleway described in paragraph 2(iii) above), running alongside the north side of the NDR classified road, skirting the north west arc of the Fir Covert Road Roundabout and then extending northwards for some 100 metres, to junction with the west side of the improved C262 Fir Covert Road at that point;
- 3(vi) the construction of a length of bridleway, from the east side of the improved C262 Fir Covert Road, at a point some 100 metres north of the Fir Covert Road Roundabout, extending southwards and then eastwards (to junction with its continuing length of bridleway described in 4(iv) below), running alongside the north side of the NDR classified road;
- 3(vii) the construction of a length of bridleway, from the east side of the improved C262 Fir Covert Road on the south side of the Fir Covert Road Roundabout, extending eastwards (to junction with its continuing length of bridleway described in 4(v) below), running alongside the south side of the NDR classified road;
- 3(viii) drainage works, earthworks, pavement works, kerbing and paved area works, signing and road marking works, safety barrier works, fencing works, landscaping works and other works integral to or otherwise incidental to the construction of the Fir Covert Road Roundabout, the improvement of the C262 Fir Covert Road, the construction of these lengths of the NDR classified road, or of the construction of other streets and private means of access to premises, described in this Work No.3; and
- 3(ix) the creation of grassland, woodland and scrubland areas to the north of the Fir Covert Road Roundabout and grassland and woodland areas to the south of the Fir Covert Road Roundabout,

all within the area identified as Work No. 3 on the Works Plan Sheet 2 of 12.

Work No. 4

- 4(i) the construction of a 970 metres length of the, dual carriageway, NDR classified road, from that length of the NDR classified road described in 3(iii) above, extending eastwards, then north eastwards, towards the Reepham Road Roundabout;
 - 4(ii) the improvement of Furze Lane (U57168), on its east side, immediately to the north of the NDR classified road, by the construction of a cul-de-sac turning head at what will become its southerly termination point on the north side of the NDR classified road;
 - 4(iii) the improvement of Breck Farm Lane (U57168), on its east side, just to the north east of Breck Farm Bungalow, by the construction of a cul-de-sac turning head at what will become its north easterly termination point on the south side of the NDR classified road;
 - 4(iv) the construction of a continuing length of bridleway (extending from that length of bridleway described in 3(vi) above), running alongside the north side of the NDR classified road, to connect with the west side of the new Marriott's Way (recreational public amenity path) Bridge crossing on the north side of the NDR classified road;
 - 4(v) the construction of a continuing length of bridleway (extending from that length of bridleway described in 3(vii) above), running alongside the south side of the NDR classified road, to its connection with both the west side of the Marriott's Way (recreational public amenity path), some 70 metres south of the NDR classified road, and with the bridleway described in 4(ix) below;
 - 4(vi) the construction of a Marriott's Way (recreational public amenity path) Bridge crossing of the NDR classified road;
 - 4(vii) the construction of a bridleway, running alongside the north side of the NDR classified road, from the east side of the new Marriott's Way (recreational public amenity path) Bridge crossing on the north side of the NDR classified road, eastwards to connect with both Furze Lane (U57168), at what is to become its southerly termination point on the north side of the NDR classified road, and with the bridleway described in 4(viii) below;
 - 4(viii) the construction of a length of bridleway, running alongside the north side of the NDR classified road, from its junction with the bridleway described in 4(vii) above, eastwards, running alongside the north side of the NDR classified road (to junction with its continuing length of bridleway described in 5(v) below);
 - 4(ix) the construction of a bridleway, to be combined in part with the private means of access described in 4(xi) below, from the south westerly termination point of stopped up Breck Farm Lane (U57168), north eastwards along that stopped up street, to a point on the east side of the existing Breck Farm Lane (U57168) bridge crossing of the Marriott's Way (recreational public amenity path);
 - 4(x) the construction of a length of cycle track (with a right of way on foot), to be combined in part with the private means of access described in 4(xi) below, from the north easterly termination point of the bridleway described in 4(ix) above, north eastwards, then eastwards, running alongside the south side of the NDR classified road (to junction with its continuing length of cycle track (with a right of way on foot) described in 5(vi) below);
 - 4(xi) the construction of a private means of access, to be combined in parts with the bridleway described in 4(ix) above and the cycle track (with a right of way on foot) described in 4(x) above, from the south westerly termination point of the stopped up Breck Farm Lane (U57168), north eastwards, then eastwards, crossing over Marriott's Way (recreational public amenity path), and continuing north eastwards, then eastwards, running alongside the south side of the NDR classified road (to junction with the improved C261 Reepham Road described in 5(iv) below);
 - 4(xii) drainage works, earthworks, pavement works, kerbing and paved area works, signing and road marking works, safety barrier works, fencing works, landscaping works and other works integral to or otherwise incidental to the construction of this length of the NDR classified road, or of the construction of other streets and private means of access, described in this Work No.4;
 - 4(xiii) the construction of 1 drainage lagoon (No.3), and access thereto, to the west of the Reepham Road Roundabout; and
 - 4(xiv) the creation of grassland, woodland and scrubland areas to the north side of the NDR classified road and grassland and woodland areas to the south side of the NDR classified road,
- all within the area identified as Work No. 4 on the Works Plan Sheet 2 of 12 and Sheet 3 of 12.

Work No. 5

- 5(i) the construction of a 50 metres length of the, dual carriageway, NDR classified road, from that length of the NDR classified road described in 4(i) above, extending north eastwards to the Reepham Road Roundabout;
- 5(ii) the construction of a roundabout junction as part of the NDR classified road, on and to connect with the C261 Reepham Road (known as 'Reepham Road Roundabout'), including the construction of a footway/cycleway around the south east and north west arcs of the Reepham Road Roundabout;
- 5(iii) the construction of a 45 metres length of the, dual carriageway, NDR classified road, extending eastwards from the Reepham Road Roundabout;
- 5(iv) the improvement of the C261 Reepham Road, by widening on its north east and south west sides, over a 250 metres length (190 metres only on its south west side) on its north westerly approach and a 250 metres length on its south easterly approach, to the Reepham Road Roundabout;
- 5(v) the construction of a length of bridleway, extending from that length of bridleway described in 4(viii) above, eastwards, alongside the north side of the NDR classified road, and around the north west arc of the Reepham Road Roundabout, then extending north westwards to connect with the south west side of the improved C261 Reepham Road, some 135 metres north west of the Reepham Road Roundabout;
- 5(vi) the construction of a length of cycle track (with a right of way on foot), combined with a private means of access, extending from those lengths of bridleway and private means of access described in 4(x) and 4(xi), respectively, above, eastwards, running along the south side of the NDR classified road, to connect with the south west boundary of the improved C261 Reepham Road, in relation to the cycle track some 50 metres south east of the Reepham Road Roundabout and in relation to the final length of independent private means of access track some 160 metres south east of the Reepham Road Roundabout;
- 5(vii) the construction of a bridleway, from a point on the north east boundary of the improved C261 Reepham Road some 130 metres north west of the Reepham Road Roundabout, extending south eastwards, then eastwards, to connect with the diverted route of Drayton Restricted Byway No.6 described in 5(viii) below, and including a short spur connection to the improved C261 Reepham Road immediately north west of the Reepham Road Roundabout;
- 5(viii) the construction of a 70 metres length of diverted route of Drayton Restricted Byway No.6, combined with a private means of access track, north eastwards off the north arc of the Reepham Road Roundabout;
- 5(ix) drainage works, earthworks, pavement works, kerbing and paved area works, signing and road marking works, safety barrier works, fencing works, landscaping works and other works integral to or otherwise incidental to the construction of the Reepham Road Roundabout, the improvement of the C261 Reepham Road, the construction of these lengths of the NDR classified road, or of the construction of other streets and private means of access, described in this Work No.5; and
- 5(x) the creation of grassland and woodland areas around the Reepham Road Roundabout,

all within the area identified as Work No. 5 on the Works Plan Sheet 3 of 12.

Work No. 6

- 6(i) the construction of a 2,205 metres length of the, dual carriageway, NDR classified road, from that length of the NDR classified road described in 5(iii) above, extending eastwards, then south eastwards, towards the Drayton Lane Roundabout;
- 6(ii) the construction of a diverted route of Horsford Restricted Byway No.5, combined with a private means of access track (known as Bell Farm Track), between the C261 Reepham Road

- and Dog Lane (U57176), together with the construction of a Bridge, midway along the routes and to the south west of Bell Farm, to carry them over the NDR classified road;
- 6(iii) the construction of a 230 metres length of private means of access track, from the C261 Reepham Road, 235 metres south east of the Reepham Road Roundabout, north eastwards, then generally eastwards, alongside grassland and woodland areas, to the retained existing woodland on the south side of the NDR classified road;
 - 6(iv) the improvement/resurfacing of Drayton Restricted Byway No.6 and Dog Lane (U57176)/Horsford Restricted Byway No.4, between the junction with diverted Drayton Restricted Byway No.6 and a point 30 metres east of Horsford Restricted Byway No.5 (Bell Farm Track);
 - 6(v) the construction of a footway/cycleway within the northern verge of the C261 Reepham Road, between its junction with Long Dale (U51249) and its junction with Horsford Restricted Byway No.5;
 - 6(vi) the construction of a length of private means of access track alongside the north side of the NDR classified road, terminating 170 metres north west of drainage lagoon No.5, and providing access to drainage lagoon No.5 off that length, and running eastwards towards the new Drayton Lane Link Road;
 - 6(vii) drainage works, earthworks, pavement works, kerbing and paved area works, signing and road marking works, safety barrier works, fencing works, landscaping works and other works integral to or otherwise incidental to the construction of this length of the NDR classified road, or of the construction of other streets and private means of access, described in this Work No.6;
 - 6(viii) the construction of 1 drainage lagoon (No.4), and access thereto, to the east of the Reepham Road Roundabout and to the north of the C261 Reepham Road;
 - 6(ix) the construction of 1 drainage lagoon (No.5) to the north of the NDR classified road 500 metres north west of the Drayton Lane Roundabout; and
 - 6(x) the creation of grassland and woodland areas to the north and south sides of this length of the NDR classified road,
- all within the area identified as Work No. 6 on the Works Plan Sheet 3 of 12 and Sheet 4 of 12.

Work No. 7

- 7(i) the construction of a 50 metres length of the, dual carriageway, NDR classified road, from that length of the NDR classified road described in 6(i) above, extending south eastwards to the Drayton Lane Roundabout;
- 7(ii) the construction of a roundabout junction as part of the NDR classified road, just to the west of the existing C282 Drayton Lane (known as ‘Drayton Lane Roundabout’), including the construction of a footway/cycleway around the north east and south east arcs of the Drayton Lane Roundabout, leading to a crossing point on the northerly arm of the roundabout
- 7(iii) the construction of a 45 metres length of the, dual carriageway, NDR classified road, extending south eastwards from the Drayton Lane Roundabout;
- 7(iv) the construction of a new Link Road, from the Drayton Lane Roundabout, north eastwards to the B1149 Holt Road;
- 7(v) the construction of a new Link Road, from the Drayton Lane Roundabout, southwards to the C261 Reepham Road;
- 7(vi) the improvement/realignment of the C261 Reepham Road on its north side, to form a T-junction with the new Link Road described in 7(v) above;
- 7(vii) the improvement of the C282 Drayton Lane (South), on its west side, by the construction of a cul-de-sac turning head at its south westerly point of stopping up, to the south of the C261 Reepham Road;
- 7(viii) the improvement of the C282 Drayton Lane (North), on its west side, by the construction of a cul-de-sac turning head at its northerly point of stopping up;
- 7(ix) the improvement of the B1149 Holt Road, over a 275 metres length south eastwards from its junction with the C253 Church Street, incorporating a 160 metres length of footway/cycleway within its north easterly boundary, south eastwards from a point 20 metres south east of its junction with the C253 Church Lane, and including the construction of a new roundabout

- (known as ‘Holt Road/Drayton Lane Roundabout’) 100 metres south west of its junction with the C253 Church Street, as a connection to the new Link Road described in 7(iv) above;
- 7(x) the construction of a cycle track (with a right of way on foot), over a length of stopped up C282 Drayton Lane (South), between the C282 Drayton Lane (South) and the C261 Reepham Road;
 - 7(xi) the construction of a cycle track (with a right of way on foot) between the C261 Reepham Road and the new Link Road described in 7(v) above;
 - 7(xii) the construction of a cycle track (with a right of way on foot) between the new Link Road described in 7(v) above and the Drayton Lane Roundabout;
 - 7(xiii) the construction of a cycle track (with a right of way on foot) between the new Link Road described in 7(iv) above and the cul-de-sac termination point of the C282 Drayton Lane described in 7(vii) above;
 - 7(xiv) the construction of a bridleway between the new Link Road described in 7(iv) above and the new cycle track (with a right of way on foot) described in 7(xiii) above;
 - 7(xv) the construction of a bridleway between the new Link Road described in 7(iv) above and the Drayton Lane Roundabout, combined with a length of private means of access track from that Link Road extending south westwards, then north westwards, to connect up with the continuing length of private access track described in 6(vi) above;
 - 7(xvi) the construction of a private means of access to ‘The Homestead’, off the new Link Road described in 7(iv) above;
 - 7(xvii) drainage works, earthworks, pavement works, kerbing and paved area works, signing and road marking works, safety barrier works, fencing works, landscaping works and other works integral to or otherwise incidental to the construction of the Drayton Lane Roundabout, these lengths of the NDR classified road, or of the construction of other streets and private means of access, described in this Work No.7;
 - 7(xviii) the construction of 1 drainage lagoon (No.6), and access thereto, to the east of the new C261 Reepham Road/Drayton Lane Link Road ‘T’ junction;
 - 7(xix) the construction of 1 drainage lagoon (No.6A), and access thereto, to the north of the new Link Road described in 7(iv) above, and immediately west of the Holt Road/Drayton Lane Roundabout described within 7(ix) above;
 - 7(xx) the creation of grassland areas at the Holt Road/Drayton Lane Roundabout; grassland and woodland areas at the Drayton Lane Link Road/C261 Reepham Road junction, and to the east and west sides of the Drayton Lane Link Road, and grassland and woodland areas around the Drayton Lane Roundabout,
- all within the area identified as Work No. 7 on the Works Plan Sheet 4 of 12.

Work No. 8

- 8(i) the construction of a 800 metres length of the, dual carriageway, NDR classified road, extending south eastwards from that length of the NDR classified road described in 7(iii) above;
- 8(ii) the construction of a Bat Gantry along this length of the NDR classified road, 390 metres south east of the Drayton Lane Roundabout;
- 8(iii) drainage works, earthworks, pavement works, kerbing and paved area works, signing and road marking works, safety barrier works, fencing works, landscaping works and other works integral to or otherwise incidental to the construction of this length of the NDR classified road; and
- 8(iv) the creation of grassland and woodland areas to the north and south sides of this length of the NDR classified road,

all within the area identified as Work No. 8 on the Works Plan Sheet 4 of 12.

Work No. 9

- 9(i) the construction of a 1,025 metres length of the, dual carriageway, NDR classified road, extending eastwards from that length of the NDR classified road described in 8(i) above, together with the construction of a new A140 Cromer Road Bridge crossing of the NDR classified road, with integral eastern footway/cycleway which extends across that bridge length

and around the north arc of the Cromer Road Roundabout North and around the south arc of the Cromer Road Roundabout South, and the construction of two NDR classified road westbound slip roads, to connect with the Cromer Road Roundabout South and the construction of two NDR classified road eastbound slip roads, to connect with the Cromer Road Roundabout North, which collective works will form a new NDR classified road/A140 Cromer Road grade separated junction;

- 9(ii) the improvement of the B1149 Holt Road, on its south west side, immediately to the north of the NDR classified road and to the south east of New Holme Farm, by the construction of a cul-de-sac turning head at what will become its south easterly termination point on the north side of the NDR classified road;
 - 9(iii) the improvement of Holly Lane (U57142), on its south side, just to the east of the private access road to Manor Farm, by the construction of a cul-de-sac turning head at what will become its easterly termination point on the south side of the NDR classified road;
 - 9(iv) the improvement of a 200 metres length of the B1149 Holt Road, north westwards off the Cromer Road Roundabout South, to provide the tie-in with the NDR classified road westbound merge slip road at the grade separated junction, including the construction of a footway/cycleway within its south west boundary and for a further 85 metres north westwards within the south west boundary of the westbound merge slip road (so as to provide a continuous footway/cycleway between the Cromer Road Roundabout South and the cycle track (with a right of way on foot) along stopped up Holly Lane (U57142) described in 9(vi) below);
 - 9(v) the construction of a cycle track (with a right of way on foot) between the south east termination point of the B1149 Holt Road, running eastwards along the north side of the NDR classified road, to junction with Cromer Road Roundabout North;
 - 9(vi) the construction of a cycle track (with a right of way on foot), from the westerly termination point of stopped up Holly Lane (U57142) just to the east of Manor Farm Bungalow, eastwards to junction with the NDR classified road westbound merge slip road at the grade separated junction, combined with a private means of access track along that part of the cycle track between the westerly termination point of stopped up Holly Lane (U57142) and drainage lagoon No. 8A;
 - 9(vii) the construction of a 140 metres cycle track (with a right of way on foot), from the Cromer Road Roundabout North, north eastwards to its junction with the Unnamed Highway (Cromer Road to West Lane) (U57647);
 - 9(viii) the construction of a 380 metres private means of access track, from the Cromer Road Roundabout North, extending eastwards running alongside the north side of the NDR classified road eastbound merge slip road at the grade separated junction;
 - 9(ix) drainage works, earthworks, pavement works, kerbing and paved area works, signing and road marking works, safety barrier works, fencing works, landscaping works and other works integral to or otherwise incidental to the construction of this length of the NDR classified road/A140 Cromer Road grade separated junction, or of the construction of other streets and private means of access, described in this Work No.9;
 - 9(x) the construction of 1 drainage lagoon (No.8), and access thereto, to the south of the NDR classified road, within the south west quadrant of the grade separated junction;
 - 9(xi) the construction of 1 drainage lagoon (No. 8A) to the south west of drainage lagoon No. 8 and to the south west of the NDR classified road westbound merge slip road at the grade separated junction;
 - 9(xii) the construction of 1 drainage lagoon (No.9), and access thereto, to the west of the A140 Cromer Road 190 metres north east of the Cromer Road Roundabout North;
 - 9(xiii) the creation of woodland and grassland areas within, and adjacent to, this length of the NDR classified road/A140 Cromer Road grade separated junction,
- all within the area identified as Work No. 9 on the Works Plan Sheet 5 of 12.

Work No. 10

- 10(i) the construction of a 1,745 metres length of the, dual carriageway, NDR classified road, from that length of the NDR classified road described in 9(i) above, extending eastwards, then north eastwards, towards the Airport Roundabout;

- 10(ii) the improvement of the C251 Bullock Hill, on its north east side, to the north of the NDR classified road and 70 metres south east of its junction with Calf Lane (U57229), by the construction of a cul-de-sac turning head, at the access point to drainage lagoon No.12, at what will become its south easterly termination point on the north side of the NDR classified road;
- 10(iii) the construction of a 130 metres length of bridleway, from the north west termination point of stopped up C251 Bullock Hill, south eastwards, and then north eastwards alongside the north side of the NDR classified road, towards the Airport Roundabout;
- 10(iv) drainage works, earthworks, pavement works, kerbing and paved area works, signing and road marking works, safety barrier works, fencing works, landscaping works and other works integral to or otherwise incidental to the construction of this length of the NDR classified road, or of the construction of the other street, described in this Work No.10;
- 10(v) the construction of 1 drainage lagoon (No.12), and access thereto, to the north of the NDR classified road, and immediately to the north east of the C251 Bullock Hill and east of Calf Lane (U57229); and
- 10(vi) the creation of grassland, woodland, and scrubland areas to the north side of this length of the NDR classified road, and grassland areas to the south side of this length of the NDR classified road,

all within the area identified as Work No. 10 on the Works Plan Sheet 5 of 12 and Sheet 6 of 12.

Work No. 11

- 11(i) the construction of a 50 metres length of the, dual carriageway, NDR classified road, from that length of the NDR classified road described in 10(i) above, extending north eastwards to the Airport Roundabout;
- 11(ii) the construction of a roundabout junction as part of the NDR classified road (known as 'Airport Roundabout'), incorporating a footway/cycleway, connecting with the bridleway described in 10(iii) above, to cross the westerly arm of the Airport Roundabout to connect with the new road described in 11(iv) below;
- 11(iii) the construction of a 45 metres length of the, dual carriageway, NDR classified road, extending south eastwards from the Airport Roundabout;
- 11(iv) the construction of a new street, a road, southwards, then westwards, off the south arc of the Airport Roundabout, and incorporating a northerly footway/cycleway off the westerly arm crossing of the Airport Roundabout (to connect with the remaining C251 Bullock Hill), to the south of the NDR classified road and providing access to the Petans Training Centre facility, the Airport Mast, and to Norwich International Airport;
- 11(v) the construction of a private means of access track, from its junction with the new street described in 11(iv) above, generally south eastwards to, and to connect with, the internal circulatory road of Norwich International Airport;
- 11(vi) the construction of a length of bridleway, extending from that length of bridleway described in 10(iii) above, skirting around the north arc of the Airport Roundabout;
- 11(vii) the construction of a length of private means of access track, from the north easterly arc of the Airport Roundabout, running south eastwards on the north east side of the NDR classified road;
- 11(viii) the construction of length of cycle track (with a right of way on foot), combined with a length of private means of access track, extending south eastwards off the new street described in 11(iv) above, running on the south west side of the NDR classified road;
- 11(ix) drainage works, earthworks, pavement works, kerbing and paved area works, signing and road marking works, safety barrier works, fencing works, landscaping works and other works integral to or otherwise incidental to the construction of these lengths of the NDR classified road, the Airport Roundabout, and of the construction of other streets and private means of access, described in this Work No.11; and
- 11(x) the creation of woodland and grassland areas around the Airport Roundabout,

all within the area identified as Work No. 11 on the Works Plan Sheet 6 of 12.

Work No. 12

- 12(i) the construction of a 2,755 metres length of the, dual carriageway, NDR classified road, from that length of the NDR classified road described in 11(iii) above, extending south eastwards, then eastwards, then north eastwards, towards the North Walsham Road Roundabout;
- 12(ii) the construction of a new street, a road, and bridge crossing of the NDR classified road, to the east of the existing C246 Buxton Road;
- 12(iii) the improvement/realignment, by widening on its east side, of its carriageway and verges, of a 240 metres length of the C246 Buxton Road on its northerly approach to the new street described in 12(ii) above, including the incorporation within its western boundary of a bridle/pedestrian path connection between the easterly termination point of the bridleway described in 12(vii) below and running down its west side to the junction of Beeston Lane (U57187), and of the layout of internal access ways leading to the existing private means of access to Nos. 318 – 324 (evens) Buxton Road and to the electricity substation to the west and rear of No.318 Buxton Road; and by widening on its west and east sides, of its carriageway and verges, of a 370 metres length of the C246 Buxton Road on its southerly approach to the new street described in 12(ii) above;
- 12(iv) the construction of a new street, a road, from the southern boundary of Quaker Lane (U57188), 40 metres west of its existing junction with the C246 Buxton Road, south eastwards to its junction with the C246 Buxton Road;
- 12(v) the construction of a length of bridleway, combined with a private means of access track, from those lengths of bridleway and private means of access track described in 11(vi) and 11(vii), respectively, above, running alongside the north east side of the NDR classified road, extending south eastwards to junction with Quaker Lane (U57188) at its westerly termination point;
- 12(vi) the construction of a length of cycle track (with a right of way on foot), combined with a length of private means of access track, from that length of cycle track (with a right of way on foot)/private means of access track described in 11(viii) above, running alongside the south west side of the NDR classified road, extending south eastwards to junction with the C251 St Faiths Road;
- 12(vii) the construction of a bridleway, from its junction with the C251 St Faiths Road and the cycle track (with a right of way on foot) described in 12(vi) above, running alongside the south side of the NDR classified road, to connect with the west side of the improved C246 Buxton Road, south of the NDR classified road;
- 12(viii) the improvement/realignment of a 30 metres length of Quaker Lane (U57188) to connect with the new street described in 12(iv) above;
- 12(ix) the improvement/widening of Quaker Lane (U57188), at its westerly termination point to the west of Nos. 1 and 2 Quaker Cottages, by way of the construction of a cul-de-sac turning head on the south side of that street, to the north of the NDR classified road;
- 12(x) the improvement of the C251 St Faiths Road at its northerly termination point, 140 metres south west of Nos. 1 and 2 Quaker Cottages, by way of the construction of a cul-de-sac turning head on the west side of that street, to the south of the NDR classified road;
- 12(xi) the construction of a bridleway, from its junction with the improved C246 Buxton Road, on the south side of the NDR classified road, extending eastwards, under the new road bridge crossing of the NDR classified road described in 12(ii) above, and then extending southwards, alongside the east side of, and connecting with, the improved/realigned C246 Buxton Road, at a point 65 metres generally north of its junction with Beeston Lane (U57187);
- 12(xii) drainage works, earthworks, pavement works, kerbing and paved area works, signing and road marking works, safety barrier works, fencing works, landscaping works and other works integral to or otherwise incidental to the construction of this length of the NDR classified road, the improvement of existing streets, or of the construction of other streets, described in this Work No.12;
- 12(xiii) the construction of 1 drainage lagoon (No.13) to the north east side of the NDR classified road and to the west of Quaker Farm;
- 12(xiv) the construction of 1 drainage lagoon (No.13A) to the south side of the NDR classified road and to the south west of Quaker Farm;
- 12(xv) the construction of 1 drainage lagoon (No.14), and access thereto, to the north side of the NDR classified road and to the east of the improved/realigned C246 Buxton Road;
- 12(xvi) the construction of 1 drainage lagoon (No.14A), and access thereto, to the south side of the NDR classified road and to the east of the improved/realigned C246 Buxton Road;

- 12(xvii) the construction of a private means of access to the gas governor, off the new street described in 12(iv) above; and
- 12(xviii) the creation of grassland, woodland and scrubland areas to the north side of the NDR classified road and grassland and woodland areas to the south side of the NDR classified road,
- all within the area identified as Work No. 12 on the Works Plan Sheet 6 of 12, Sheet 7 of 12 and Sheet 8 of 12.

Work No. 13

- 13(i) the construction of a 50 metres length of the, dual carriageway, NDR classified road, from that length of the NDR classified road described in 12(i) above, extending eastwards to the North Walsham Road Roundabout;
- 13(ii) the construction of a roundabout junction as part of the NDR classified road, on and to connect with the B1150 North Walsham Road (known as 'North Walsham Road Roundabout'), incorporating footways/cycleways around all four arcs of the roundabout;
- 13(iii) the construction of a 45 metres length of the, dual carriageway, NDR classified road, extending eastwards from the North Walsham Road Roundabout;
- 13(iv) the improvement of the B1150 North Walsham Road, by widening on its east and west sides on its immediate southerly and northerly approaches to the North Walsham Road Roundabout;
- 13(v) the construction of a length of private means of access track, from the east side of the improved B1150 North Walsham Road, 95 metres north of the North Walsham Road Roundabout, running southwards, then eastwards, along the north side of the NDR classified road;
- 13(vi) drainage works, earthworks, pavement works, kerbing and paved area works, signing and road marking works, safety barrier works, fencing works, landscaping works and other works integral to or otherwise incidental to the construction of these lengths of the NDR classified road, the North Walsham Road Roundabout, or the improvement of the B1150 North Walsham Road and the construction of private means of access, described in this Work No.13; and
- 13(vii) the creation of grassland and woodland areas around the North Walsham Road Roundabout, all within the area identified as Work No. 13 on the Works Plan Sheet 8 of 12.

Work No. 14

- 14(i) the construction of a 1,945 metres length of the, dual carriageway, NDR classified road, from that length of the NDR classified road described in 13(iii) above, extending eastwards, then south eastwards, towards the Wroxham Road Roundabout;
- 14(ii) the construction of a length of private means of access track, as a continuation of the length of private means of access described in 13(v) above, extending eastwards alongside the north side of the NDR classified road, to terminate at drainage lagoon No. 17 and with access off that length to drainage lagoon No.16;
- 14(iii) the construction of a length of bridleway, from the northern (90 degree) corner of Beeston Lane (U57186), extending northwards, and combined with a private means of access track along that northerly running length, then eastwards, alongside the south side of the NDR classified road, to junction with the north west side of the improved A1151 Wroxham Road, 80 metres south west of the Wroxham Road Roundabout;
- 14(iv) drainage works, earthworks, pavement works, kerbing and paved area works, signing and road marking works, safety barrier works, fencing works, landscaping works and other works integral to or otherwise incidental to the construction of this length of the NDR classified road, or of the construction of other streets and private means of access, described in this Work No.14;
- 14(v) the construction of 1 drainage lagoon (No.16) to the north of the NDR classified road, 170 metres north east of North Park Cottage;
- 14(vi) the construction of 1 drainage lagoon (No.17), including permanent wet area, to the north of the NDR classified road, 200 metres north east of the 90 degree corner of Beeston Lane (U57186); and
- 14(vii) the creation of grassland and woodland areas to the north side of this length of the NDR classified road and grassland, woodland and scrubland areas to the south side of this length of the NDR classified road,

all within the area identified as Work No. 14 on the Works Plan Sheet 8 of 12 and Sheet 9 of 12.

Work No. 15

- 15(i) the construction of a 50 metres length of the, dual carriageway, NDR classified road, from that length of the NDR classified road described in 14(i) above, extending south eastwards to the Wroxham Road Roundabout;
- 15(ii) the construction of a roundabout junction as part of the NDR classified road, on and to connect with the A1151 Wroxham Road (known as 'Wroxham Road Roundabout'), incorporating the construction of footways/cycleways around the west, north and east arcs of the roundabout;
- 15(iii) the construction of a 45 metres length of the, dual carriageway, NDR classified road, extending south eastwards from the Wroxham Road Roundabout;
- 15(iv) the improvement, by widening on its south east and north west sides, of 120 metres lengths of the A1151 Wroxham Road on its north easterly and south westerly approaches to the Wroxham Road Roundabout;
- 15(v) the construction of a length of bridleway, as a continuation of the bridleway described in 14(iii) above, extending south westwards to junction with the north west side of the improved A1151 Wroxham Road, 120 metres south west of the Wroxham Road Roundabout;
- 15(vi) the construction of a length of bridleway, from the south east side of the improved A1151 Wroxham Road, extending north eastwards, then skirting the south arc of the Wroxham Road Roundabout, to continue south eastwards alongside the west side of the NDR classified road;
- 15(vii) the construction of two private means of access tracks, to the sewage works and the springs, off the north arc of the Wroxham Road Roundabout;
- 15(viii) the construction of a private means of access track off the south arc of the Wroxham Road Roundabout;
- 15(ix) drainage works, earthworks, pavement works, kerbing and paved area works, signing and road marking works, safety barrier works, fencing works, landscaping works and other works integral to or otherwise incidental to the construction of these lengths of the NDR classified road, the Wroxham Road Roundabout, the improvement of the A1151 Wroxham Road, or of the construction of other streets and private means of access, described in this Work No.15; and
- 15(x) the creation of grassland and woodland areas around the Wroxham Road Roundabout,

all within the area identified as Work No. 15 on the Works Plan Sheet 9 of 12.

Work No. 16

- 16(i) the construction of a 1,655 metres length of the, dual carriageway, NDR classified road, from that length of the NDR classified road described in 15(iii) above, extending south westwards towards the Salhouse Road Roundabout;
- 16(ii) the construction of a private means of access track, off the C258 Green Lane West, lying to the south of The Close, extending south westwards and terminating at drainage lagoons No.18 and No.18A and the pumping station;
- 16(iii) the construction of a bridleway, from the junction of Newman Road (U57490) with Long's Crescent (U57852), extending south westwards to the west side of the NDR classified road, combined with part of the private means of access track described in 16(iv) below, including the construction of a bridge to carry it, and the said private means of access, across the NDR classified road;
- 16(iv) the construction of a private means of access track, from the junction of Newman Road (U57490) with Long's Crescent (U57852), extending south westwards, then generally westwards, and combined with the bridleway described in 16(iii) above over its first 265 metres length, for 550 metres, and with three main access track spurs leading off it, including the construction of a bridge to carry it, and the bridleway described in 16(iii) above, across the NDR classified road;
- 16(v) the construction of a length of bridleway, as a continuation to the bridleway described in paragraph 15(vi) above, running alongside the west side of the NDR classified road, to connect with the Newman Track bridleway/private means of access bridge;

- 16(vi) the construction of a length of cycle track (with a right of way on foot), from the junction with the bridleway described in 16(iii) above, running alongside the west side of the NDR classified road, extending south eastwards towards the Salhouse Road Roundabout;
- 16(vii) the construction of a bat underpass, combined with a drainage culvert, under the NDR classified road, west Sir Edward Stacey Road (U57538), including the provision of a natural flow ditch running from the eastern end of the culvert;
- 16(viii) the demolition of Gazebo Farm and Hall Farm buildings;
- 16(ix) the construction of 1 bat house at Gazebo Farm and 1 bat house at Hall Farm;
- 16(x) drainage works, earthworks, pavement works, kerbing and paved area works, signing and road marking works, safety barrier works, fencing works, landscaping works and other works integral to or otherwise incidental to the construction of this length of the NDR classified road, or of the construction of other streets and private means of access, described in this Work No.16;
- 16(xi) the creation of 1 drainage lagoon (No.18), including permanent wet area, to the east side of this length of the NDR classified road and 210 metres north west of Sir Edward Stracey Road (U57358);
- 16(xii) the creation of a natural flow ditch to the south and west of drainage lagoon No. 18;
- 16(xiii) the creation of 1 drainage lagoon (No. 18A) to the east side of this length of the NDR classified road and to the north of drainage lagoon No. 18;
- 16(xiv) the creation of a flood plain compensatory storage area (No.18B) to the east of this length of the NDR classified road and to the south of drainage lagoon No.18;
- 16(xv) the provision of ecological ponds to the west of this length of the NDR classified road and to north west of Newman Road overbridge; and
- 16(xvi) the creation of grassland and woodland areas to the east side of this length of the NDR classified road and grassland, woodland and scrubland areas to the west side of this length of the NDR classified road,

all within the area identified as Work No. 16 on the Works Plan Sheet 9 of 12 and Sheet 10 of 12.

Work No. 17

- 17(i) the construction of a 50 metres length of the, dual carriageway, NDR classified road, from that length of the NDR classified road described in 16(i) above, extending south eastwards to the Salhouse Road Roundabout;
- 17(ii) the construction of a roundabout junction as part of the NDR classified road, on and to connect with, the C283 Salhouse Road (known as ‘Salhouse Road Roundabout’), incorporating the construction of footways/cycleways around the north, south and east arcs of the Salhouse Road Roundabout;
- 17(iii) the construction of a 50 metres length of the, dual carriageway, NDR classified road, extending south eastwards from the Salhouse Road Roundabout;
- 17(iv) the improvement, by widening on its north west and south east sides, of a 175 metres length of the C283 Salhouse Road on its south westerly approach to the Salhouse Road Roundabout and of a 70 metres length on its north easterly approach to the Salhouse Road Roundabout, and the improvement, by widening on its south east side only, of a further 120 metres length of the C283 Salhouse Road, extending south westwards from a point 20 metres south west of its junction with the carriageway of the C258 Green Lane West/Green Lane East, and of a 55 metres length extending south westwards from a point 70 metres south west of its junction with the Salhouse Road Roundabout;
- 17(v) the construction of a length of cycle track (with a right of way on foot), as a continuation of the cycle track described in 16(vi) above, extending south eastwards, around the west arc of the Salhouse Road Roundabout, then south westwards to junction with the north west side of the improved C283 Salhouse Road, some 60 metres south west of the Salhouse Road Roundabout;
- 17(vi) drainage works, earthworks, pavement works, kerbing and paved area works, signing and road marking works, safety barrier works, fencing works, landscaping works and other works integral to or otherwise incidental to the construction of these lengths of the NDR classified road, the Salhouse Road Roundabout, or of the construction of other streets, described in this Work No.17; and

17(vii) the creation of grassland and woodland areas around the Salhouse Road Roundabout, all within the area identified as Work No. 17 on the Works Plan Sheet 10 of 12.

Work No. 18

- 18(i) the construction of a 1,205 metres length of the, dual carriageway, NDR classified road, from that length of the NDR classified road described in 17(iii) above, extending south eastwards to and including the construction of a new roundabout junction (known as 'Plumstead Road Roundabout South'), 310 metres south east of the NDR classified road crossing of the Norwich to Cromer & Sheringham Railway line, and extending 45 metres southwards of that roundabout junction;
- 18(ii) the improvement of the C258 Broad Lane, on its south west side, opposite the property 'Leighton House', by the construction of a cul-de-sac turning head at that point; and of the undertaking of other landscaping/verge works across the north west junction of the C258 Broad Lane/C874 Plumstead Road 90 metres to the south east of the aforementioned turning head, which will provide the physical works of closure at that junction;
- 18(iii) the improvement, by widening on its south east side, of a 420 metres length of the C874 Plumstead Road extending south westwards from a point 20 metres south west of its junction with the C258 Broad Lane, including the construction of a footway/cycleway within the north western boundary of that length of improved street and the construction of a roundabout junction (known as 'Plumstead Road Roundabout North') on, and as part of the improvement of, the C874 Plumstead Road, at a point 220 metres south west of its junction with the C258 Broad Lane;
- 18(iv) the construction of a new street, a road, between the Plumstead Road Roundabout North and the Plumstead Road Roundabout South;
- 18(v) the construction of a bridge to carry the NDR classified road over the C874 Plumstead Road;
- 18(vi) the construction of a bridleway, combined with the private means of access described in 18(vii) below for its first 90 metres length, running along the west side of the Norwich to Cromer & Sheringham railway, from a point on the C874 Plumstead Road just west of the gas compound, extending north westwards, then north eastwards, then northwards, to junction with the C258 Green Lane East;
- 18(vii) the construction of a private means of access track, combined with the bridleway described in 18(vi) above for its first 90 metres length, from the C874 Plumstead Road just west of the gas compound, extending north westwards, then north eastwards, then north westwards, running along the south west side of the NDR classified road;
- 18(viii) the construction of a private means of access track, from the improved C258 Broad Lane, where a turning head is to be provided opposite 'Leighton House', running in a south westerly, then south easterly, direction to junction with the C874 Plumstead Road;
- 18(ix) the construction of a bridleway, from the south east side of the improved C874 Plumstead Road, opposite 'Ladoma', extending south westwards, along the south east side of the improved C874 Plumstead Road, then southwards, along the east side of the street described in 18(iv) above, then skirting the east arc of the Plumstead Road Roundabout South, then extending 45 metres southwards of that roundabout junction, along the east side of the NDR classified road;
- 18(x) the construction of a 110 metres private means of access track, running westwards, then northwards, off the west arc of the Plumstead Road Roundabout South;
- 18(xi) the construction of a 75 metres private means of access track, running eastwards off the new street described in 18(iv) above;
- 18(xii) drainage works, earthworks, pavement works, kerbing and paved area works, signing and road marking works, safety barrier works, fencing works, landscaping works and other works integral to or otherwise incidental to the construction of this length of the NDR classified road, the improvement of the C874 Plumstead Road, the construction of the Plumstead Road Roundabout North and the Plumstead Road Roundabout South, or of the construction of other streets and private means of access, described in this work No.18;
- 18(xiii) the construction of 1 drainage lagoon (No.19), and access thereto, to the east side of this length of the NDR classified road and 250 metres south west of the C283 Salhouse Road/C258 Green Lane East junction;

- 18(xiv) the construction of 1 drainage lagoon (No.20), and access thereto, to the east side of this length of the NDR classified road and 370 metres south of the C283 Salhouse Road/C258 Green Lane East junction;
- 18(xv) the construction of 1 drainage lagoon (No.21), and access thereto, to the east side of the Plumstead Road Roundabout North and 160 metres west of the C874 Plumstead Road/C258 Broad Lane junction;
- 18(xvi) the construction of 1 drainage lagoon (No.22), and access thereto, to the north side of the Plumstead Road Roundabout South and 300 metres south west of the C874 Plumstead Road/C258 Broad Lane junction;
- 18(xvii) the creation of grassland and woodland areas adjoining and within the junction works described in 18(i) – (iii) above, and on the east and west sides of this length of the NDR classified road, all within the area identified as Work No. 18 on the Works Plan Sheet 10 of 12 and Sheet 11 of 12.

Work No. 19

- 19(i) the construction of a new bridge to carry the NDR classified road over the Norwich to Cromer & Sheringham Railway line, including drainage works, earthworks, pavement works, kerbing and paved area works, signing and road marking works, safety barrier works, fencing works, landscaping works and other works associated with the construction of that bridge component of the NDR classified road,
- all within the area identified as Work No. 19 on the Works Plan Sheet 10 of 12.

Work No. 20

- 20(i) the construction of a 2,015 metres length of the, dual carriageway, NDR classified road, extending from that length of the NDR classified road described in 18(i) above, southwards, then south eastwards, towards the Business Park Roundabout, including the construction of northbound and southbound lay-bys on this length of the NDR classified road, immediately east of drainage lagoon No. 24;
- 20(ii) the improvement, by widening on both its north and south sides, of the C442 Middle Road on its 310 metres length easterly approach, and 190 metres length westerly approach to its bridge crossing of the NDR classified road, together with the construction of a bridge to carry its 75 metres realigned length, between the two aforementioned lengths, over the NDR classified road, and incorporating a bridle/pedestrian path within its southern embankment improvement, west of the NDR classified road, to connect with the new bridleway described in 20(xi) below;
- 20(iii) the improvement, by widening on its north side, of a length of Low Road (U59392) immediately to the east of the NDR classified road, by way of the construction of a turning head at what is to be its western termination point on the east side of the NDR classified road;
- 20(iv) the improvement, by widening on its north side, of a length of Low Road (U59392) immediately to the east of its junction with Green Lane (U59278), by way of the construction of a turning head at what is to be its eastern termination point on the west side of the NDR classified road;
- 20(v) The improvement, by widening on its south side, of a length of Smee Lane (U59400), at a point 180 metres east of its junction with the Green Lane (U59278)/C832 Cranley Road/C830 Broadland Way roundabout junction, by way of the construction of a turning head at what is to be its eastern termination point on the west side of the NDR classified road;
- 20(vi) The improvement, by widening on its south side, of a length of Smee Lane (U59400) immediately to the east of the NDR classified road, by way of the construction of a turning head at what is to be its western termination point on the east side of the NDR classified road;
- 20(vii) the construction of a length of bridleway, as a continuation of the bridleway described in paragraph 18(ix) above, running southwards alongside the east side of the NDR classified road, to junction with the C442 Middle Road (U59400);
- 20(viii) the construction of a new private means of access track to Oaks Farm;
- 20(ix) the construction of a bridleway, from the C442 Middle Road (U59400), running southwards alongside the east side of the NDR classified road, to junction with Smee Lane (U59400);
- 20(x) the construction of a cycle track (with a right of way on foot), from the bridleway described in 20(ix) above, at Smee Lane (U59400), combined with a private means of access track over a

- 185 metres length to lagoon No.25, running south eastwards alongside the east side of the NDR classified road, towards the Business Park Roundabout;
- 20(xi) the construction of a bridleway running south eastwards alongside the west side of the NDR classified road, from the C442 Middle Road to junction with the bridleway described in 20(xiii) below and, part way along its length, with the bridleway described in 20 (xii) below;
 - 20(xii) the construction of a bridleway, combined with a private means of access track to various premises along that length, along stopped up Low Road (U59392), from the turning head on Low Road (U59392), immediately east of Green Lane (U59278), running eastwards to junction with the bridleway described in 20(xi) above;
 - 20(xiii) the construction of a bridleway, combined with part of the private means of access track described in 20(xiv) below, from the westerly turning head on Smee Lane (U59400), running eastwards to junction with the bridleway described in 20(xi) above;
 - 20(xiv) the construction of a private means of access track, combined in part with the bridleway described in 20(xiii) above, from the westerly turning head on Smee Lane (U59400), running eastwards to and including an access turning head to be constructed immediately to the west of the NDR classified road;
 - 20(xv) drainage works, earthworks, pavement works, kerbing and paved area works, signing and road marking works, safety barrier works, fencing works, landscaping works and other works integral to or otherwise incidental to the construction of this length of the NDR classified road, the improvement of the C442 Middle Road, Low Road (U59392) and Smee Lane (U59400), or of the construction of other streets and private means of access, described in this Work No. 20;
 - 20(xvi) the construction of 1 drainage lagoon (No.23), and access thereto, to the east side of the NDR classified road 120 metres south west of the junction of the C442 Middle Road with Toad Lane (U59284);
 - 20(xvii) the construction of 1 drainage lagoon (No.24), and access thereto, to the west side of the NDR classified road 120 metres east of the Nursery outbuildings located north off Smee Lane (U59400);
 - 20(xviii) the construction of 1 drainage lagoon (No.25), and access thereto, east of the NDR classified road and 160 metres to the north of the Business Park Roundabout; and
 - 20(xix) the creation of grassland and woodland areas to the east and west sides of this length of the NDR classified road,
- all within the area identified as Work No. 20 on the Works Plan Sheet 11 of 12 and Sheet 12 of 12.

Work No. 21

- 21 the construction of a new junction (known as ‘Postwick Hub Junction’) to link the, dual carriageway, NDR classified road described in 20(i) above with the A47 Trunk Road, comprising:
 - 21(i) the construction of a 50 metres length of, dual carriageway, NDR classified road from that length of the NDR classified road described in 20(i) above, extending south eastwards to the Business Park Roundabout;
 - 21(ii) the construction of a roundabout junction as part of the NDR classified road, at the south east end of the NDR classified road described in 21(i) above (known as ‘Business Park Roundabout’);
 - 21(iii) the construction of a 550 metres length of the, dual carriageway, NDR classified road, from the Business Park Roundabout, south westwards to a new roundabout on the north side of the A47 Trunk Road (known as ‘Postwick North East Roundabout’);
 - 21(iv) the construction of a roundabout at the south west end of the NDR classified road described in 21(iii) above (known as ‘Postwick North East Roundabout’);
 - 21(v) the construction of a new bifurcated A47 Trunk Road eastbound diverge slip road, from a point on the eastbound carriageway of the A47 Trunk Road 250 metres generally east of where the A47 Trunk Road crosses over the Norwich to Yarmouth & Lowestoft Railway line, generally eastwards to connect with the Postwick North East Roundabout and with the northbound carriageway of the NDR classified road;

- 21(vi) the construction of a new A47 Trunk Road eastbound merge slip road, from the Postwick North East Roundabout, generally eastwards to connect with the eastbound carriageway of the A47 Trunk Road 125 metres west of the private access to ‘The Grange’;
- 21(vii) the construction of a 300 metres length of the, single carriageway, NDR classified road, and a new bridge crossing of the A47 Trunk Road (known as ‘New Postwick Bridge’), incorporating an easterly footway/cycleway along its length, from the Postwick North East Roundabout, south westwards to the junction of the A1042 Yarmouth Road, in the vicinity of the existing and proposed Postwick Park and Ride sites;
- 21(viii) the improvement of the A1042 Yarmouth Road, by the construction of a signalised junction (known as ‘Park and Ride Signalised Junction’), to replace the existing roundabout on the A1042 Yarmouth Road at the existing Postwick Park and Ride site;
- 21(ix) the improvement of the A1042 Yarmouth Road, over a 630 metres length east from the signalised junction described in 21(viii) above, including the provision of its tie-in with the new signalised junction and, along its northern verge, the construction of a new footway/cycleway eastwards to its junction with the C440 Church Road;
- 21(x) bridge and carriageway/verge alterations to the existing A1042 Yarmouth Road bridge over the A47 Trunk Road, including replacement of the bridge parapets, remodelling of its carriageway to provide three 3 metres wide lanes (2 southbound and 1 northbound), the construction of a footway/cycleway within the widened west side of the bridge, and the construction of a new vertical retaining northern bridge abutment, to replace the existing sloping paved embankment;
- 21(xi) the construction of a 550 metres single carriageway link road (known as ‘Broadland Gate Link’), from the Business Park Roundabout, westwards to the C829/C830 Broadland Way/C831 Peachman Way roundabout, incorporating the construction of a new roundabout (known as ‘Broadland Gate Roundabout’) and a 15 metres length southwards stub connection (for future access connection to the internal road layout proposed to serve the proposed Broadland Gate mixed commercial development), 310 metres along its length west of the Business Park Roundabout;
- 21(xii) the improvement of the east arc of the C829/C830 Broadland Way/C831 Peachman Way roundabout, to provide the tie-in connection with the Broadland Gate Link described in 21(xi) above and to part realign the southbound entry through the roundabout from the C831 Peachman Way;
- 21(xiii) alterations to the existing Postwick North West Roundabout, comprising the construction of a 14 metres eastwards stub connection (for the provision of future access to the proposed Broadland Gate development), and its widening on its south arc to incorporate carriageway alterations resulting from the removal of its connection with the A47 Trunk Road diverge slip road which is to be stopped up, together with the construction of a footway/cycleway connection across the north easterly connection point of the A47 Trunk Road diverge slip road which is to be removed;
- 21(xiv) the construction of a length of cycle track (with a right of way on foot), as a continuation of the cycle track described 20(x) above, running south, around the east side of the Business Park Roundabout, then continuing south westwards to junction with the Postwick North East Roundabout;
- 21(xv) the construction of a cycle track (with a right of way on foot), from the eastbound carriageway of the A47 Trunk Road to the Postwick North West Roundabout;
- 21(xvi) the construction of a private means of access from the Postwick North East Roundabout running eastwards to ‘The Grange’, and along its length providing access to drainage lagoon No.30;
- 21(xvii) the construction of a length of private means of access (continuing the existing length of access as extends off the C829 Broadland Way), running alongside the north side of the new A47 Trunk Road eastbound diverge slip road, to Heath Farm;
- 21(xviii) drainage works, earthworks, pavement works, kerbing and paved area works, signing and road marking works, safety barrier works, fencing works, landscaping works and other works integral to or otherwise incidental to the construction of this length of the NDR classified road, or of other existing streets to be improved, or of the construction of other streets and private means of access, as part of the Postwick Hub Junction, described in this Work No.21;
- 21(xix) the construction of 1 drainage lagoon (No.26) west of the Broadland Gate Roundabout and to the east of the C829/C830 Broadland Way/C831 Peachman Way roundabout;

- 21(xx) the construction of 1 wide infiltration swale (No.27) within the west side of the NDR classified road, between the Postwick North East Roundabout and the Business Park Roundabout;
 - 21(xxi) the construction of 1 drainage lagoon (No.28), and access thereto, to the west of the Postwick North East Roundabout, to the south of the new A47 Trunk Road eastbound diverge slip road, and to the north of the A47 Trunk Road eastbound carriageway;
 - 21(xxii) the construction of 1 drainage lagoon (No.29) to the north east of the A1042 Yarmouth Road Park and Ride Signalised Junction;
 - 21(xxiii) the construction of 1 drainage lagoon (No.30) to the east of the Postwick North East Roundabout and to the north of the new A47 Trunk Road eastbound merge slip road; and
 - 21(xxiv) the creation of grassland, woodland and scrubland areas adjoining and within the Postwick Hub Junction,
- all within the area identified as Work No. 21 on the Works Plan Sheet 12 of 12.

Work No. 22

- 22(i) the construction of a 95 metres length of single carriageway road, from the junction with the C258 Green Lane West 115 metres south east of its existing junction with the A1151 Wroxham Road, generally north westwards to its junction with the A1151 Wroxham Road;
- 22(ii) the improvement, by widening and realignment on its west side, of a 62 metres length of the C258 Green Lane West, from the south easterly connection point of, and so as to provide a tie-in with, the new street described in 22(i) above;
- 22(iii) the improvement, by widening, of a 15 metres length of the C258 Green Lane West at its junction with the A1151 Wroxham Road, by way of the construction of a cul-de-sac turning head at that point (at which its existing junction with the A1151 Wroxham Road will be closed);
- 22(iv) the improvement of a 160 metres length of the A1151 Wroxham Road south west of, and a 160 metres length north east of, the junction of the new street described in 22(i) above, including widening and verge alterations along parts of that length, including at the point of its junction with the existing C258 Green Lane West which will implement landscaping/verge works which will provide the physical works of closure of that junction; and
- 22(v) drainage works, earthworks, pavement works, kerbing and paved area works, signing and road marking works, safety barrier works, fencing works, landscaping works and other works associated with the construction of the new street described in 22(i) above, and of the improvement of the A1151 Wroxham Road and the C258 Green Lane West, described in this Work No.22,

all within the area identified as Work No. 22 on the Works Plan Sheet 9 of 12.

Work No. 23

- 23(i) street improvement works over a 750 metres length of the C874 Plumstead Road, south westwards from a point 230 metres north east of its junction with Broadland Drive (U51073), and over a 20 metres length of Broadland Drive (U51073) from its junction with the C874 Plumstead Road, at Thorpe End, including the construction of a mini roundabout at the junction of the C874 Plumstead Road with Broadland Drive (U51073), and the construction of a footway/cycleway within the northern verge of the C874 Plumstead Road along the frontages of No.15 Percy Howes Close and Nos. 49-63 (odds) Plumstead Road; and
- 23(ii) drainage works, earthworks, pavement works, kerbing and paved area works, signing and road marking works, safety barrier works, fencing works, landscaping works and other works associated with the street improvement works of the C874 Plumstead Road and Broadland Drive (U51073), described in this Work No.23,

all within the area identified as Work No. 23 on the Works Plan Sheet 11 of 12.

Work No. 24

- 24(i) the improvement of a 80 metres length of the B1150 North Walsham Road south of, and a 78 metres length north of, its junction with the C249 Rackheath Lane, incorporating verge alterations along parts of those lengths, including at the point of its junction with the existing C249 Rackheath Lane which will implement landscaping/verge works which will provide the

physical works of closure of that junction, together with the provision of a widened filter lane from the C249 Crostwick Lane to the northbound lane of the B1150 North Walsham Road;

- 24(ii) the improvement, by widening, of a 15 metres length of the C249 Rackheath Lane at its junction with the B1150 North Walsham Road, by way of the construction of a cul-de-sac turning head at that point (at which its existing junction with the B1150 North Walsham Road will be closed); and
- 24(iii) drainage works, earthworks, pavement works, kerbing and paved area works, signing and road marking works, safety barrier works, fencing works, landscaping works and other works associated with the improvement of the B1150 North Walsham Road and of the C249 Rackheath Lane, described in this Work No.24,

all within the area identified as Work No. 24 on the Works Plan Sheet 8 of 12.

And in connection with the undertaking of any of those works described in Work Nos. 1 - 24, such further development within the Order limits as may comprise of:

- (a) alteration of the layout of any street permanently or temporarily, including but not limited to increasing the width of the carriageway of the street by reducing the width of any kerb, footway, cycleway or verge within the street; altering the level or increasing the width of any such kerb, footway, cycleway or verge; reducing the width of the carriageway of the street; and provision of turning heads;
- (b) ramps, means of access, field accesses, footpaths, bridleways, cycle tracks, embankments, viaducts, aprons, abutments, shafts, foundations, retaining walls, drainage, wing walls, street lighting, fencing and culverts;
- (c) street works, including breaking up or opening a street, or any sewer, drain or tunnel under it; tunnelling or boring under a street; works to place or maintain apparatus in a street, works to alter the position of apparatus, including mains, sewers, drains and cables;
- (d) works to divert, alter, or other works to apparatus including mains, sewers, drains and cables;
- (e) works to alter the course of, or otherwise interfere with, a watercourse other than a navigable watercourse;
- (f) landscaping and other works, including the provision of hedgerows, to mitigate any adverse effects of the construction, maintenance or operation of the authorised development, including fencing and other boundary treatments;
- (g) works for the benefit or protection of land affected by the authorised development;
- (h) works required for the strengthening, improvement, maintenance, or reconstruction of any streets;
- (i) the provision of bat boxes, bat gantries, newt fencing, badger fencing and boxes for other wildlife; and
- (j) such other works, including contractor's compounds, working sites, storage areas, temporary top soil storage areas, and works of demolition, as may be necessary or expedient for the purposes of or in connection with the construction or maintenance of the authorised development and which fall within the scope of the environmental impact assessment.

SCHEDULE 2

REQUIREMENTS

Articles 3 and 46

Interpretation

1. In this Schedule—

(1) the following expressions shall have the following meanings:

“the advance works” means works including or in connection with site clearance, archaeological works, ecological mitigation, utility diversions, construction of bat gantries and the construction or erection of contractor’s offices and compounds;

"Design Manual for Roads and Bridges" means the document(s) of that name published by the Department for Transport;

“heavy goods vehicle” means a heavy goods vehicle of 7.5 tonnes gross vehicle weight or more;

“Marriott’s Way” means the land defined as the “Marriott’s Way open space land” in article 2;

"relevant district authority" means in respect of each of their respective administrative areas Broadland District Council, Norwich City Council and the Broads Authority (as applicable in respect of each work number); and

“relevant planning authority” means Norfolk County Council.

(2) where any requirement specifies that the relevant planning authority shall approve a matter “following consultation with the relevant district authorities” such consultation shall be carried out by the relevant planning authority in accordance with paragraph 2(3) of Schedule 15 (Procedure for discharge of requirements).

Time limits

2. The authorised development shall commence no later than the expiration of five (5) years beginning with the date that this Order comes into force.

Commencement of the authorised development

3. Notice of commencement of the authorised development shall be given to the relevant planning authority in writing within seven (7) days from the date that the authorised development is commenced.

Development to be carried out in accordance with plans

4. The authorised development must be carried out in accordance with the approved plans, such plans being subject to the limits of deviation, bearing references listed below and any other plans, drawings, documents, details, schemes, statements or strategies which have been approved by the relevant planning authority pursuant to any requirement:

Plan Name	Plan Numbers
Works Plans	R1C093-R1-5002, R1C093-R1-5003, R1C093-R1-5004, R1C093-R1-5005, R1C093-R1-5006, R1C093-R1-5007, R1C093-R1-5008, R1C093-R1-5009, R1C093-R1-50010, R1C093-R1-50011, R1C093-R1-50012, R1C093-R1-50013
General Arrangement Plans	R1C093-R1-5015, R1C093-R1-5016, R1C093-R1-5017, R1C093-R1-5018, R1C093-R1-5019, R1C093-R1-5020, R1C093-R1-5021, R1C093-R1-5022, R1C093-R1-5023, R1C093-R1-5024, R1C093-R1-5025, R1C093-R1-5026

Landscape

5.—(1) No part of each of work numbers 1 to 24 save for any advance works is to commence until a written landscape plan covering the landscape elements forming part of the relevant work number has been submitted to and, following consultation with the relevant district authorities, approved in writing by the relevant planning authority.

(2) The landscape plan (or plans) must include the following which must comply with or include relevant measures, details or mitigation set out in the environmental statement—

- (a) details of the landscape works and measures;
- (b) details of the implementation of the landscape works and measures; and
- (c) details of the management, monitoring and maintenance of landscape works and measures.

(3) The approved landscape plan (or plans) must be implemented in full.

(4) Any tree or shrub planted as part of the approved landscape plan (or plans) that, within a period of 2 years after planting, is removed, dies or becomes in the opinion of the relevant planning authority, seriously damaged or diseased shall be replaced in the first available planting season with a specimen of the same species as that originally planted.

Existing trees and hedgerows

6.—(1) All hedges and trees forming part of the boundary of the Order land or situated within it (unless shown to be removed in the environmental statement or a landscape plan approved pursuant to requirement 5) shall be protected from any damage during the construction of the authorised development.

(2) If any hedge or tree protected under sub-paragraph (1) is removed, uprooted, destroyed or damaged during the construction of the authorised development it shall be replaced in the first available planting season and thereafter maintained for a period of 2 years.

(3) All areas of the site left undisturbed, and all soil, soil making material and overburden mounds shall be kept free from noxious weeds throughout the construction of the authorised development.

Ecology

7.—(1) No part of each of work numbers 1 to 24 save for any advance work is to commence until a written ecological management plan covering the ecological and nature conservation elements forming part of the relevant work number has been submitted to and, following consultation with the relevant district authorities, approved in writing by the relevant planning authority.

(2) The ecological management plan (or plans) must include the following which must comply with or include relevant measures, details or mitigation set out in the environmental statement—

- (a) details of the ecological and nature conservation works and measures;
- (b) details of the implementation of the ecological and nature conservation works and measures; and
- (c) details of the management, monitoring and maintenance of ecological and nature conservation works and measures.

(3) The approved ecological management plan (or plans) must be implemented in full.

Contamination

8.—(1) No part of each of work numbers 1 to 24 save for any advance works shall commence until a written scheme and programme of remedial measures to be taken as necessary to render the land fit for

its intended purpose has been submitted to and, following consultation with the relevant district authorities, approved in writing by the relevant planning authority.

(2) The implementation of work numbers for which such remedial measures are required shall be carried out in accordance with the written scheme and programme of remedial measures approved pursuant to paragraph (1).

(3) In the event that contaminated materials are found at any time when carrying out the authorised development which were not previously identified in the environmental statement or the scheme approved pursuant to paragraph (1), it shall be reported immediately in writing to the relevant planning authority and the undertaker shall complete a risk assessment of the contamination.

(4) Where the relevant planning authority determines that remediation is necessary, a written scheme and programme for the remedial measures to be taken to render the land fit for its intended purpose, shall be submitted to and approved in writing by the relevant planning authority.

(5) Remediation shall be carried out in accordance with the scheme(s) approved pursuant to this requirement 8.

Noise and Vibration

9.—(1) No part of each of work numbers 1 to 24 save for any advance works shall commence until a written scheme for noise and vibration management during construction of that work number has been submitted to and, following consultation with the relevant district authorities, approved by the relevant planning authority.

(2) The scheme shall set out the particulars of—

- (a) the works necessary for the work number(s) in question and the method by which they are to be carried out;
- (b) the noise attenuation measures to be taken to minimise noise resulting from such works including any noise limits; and
- (c) a scheme for monitoring the noise during such works to ensure compliance with the noise limits and the effectiveness of the attenuation measures.

(3) The approved noise and vibration management scheme must be implemented before and maintained during the construction of the relevant part of the authorised development.

(4) The construction works must be undertaken in accordance with the approved noise and vibration management scheme.

Travel Plan

10.—(1) No part of each of work numbers 1 to 24 save for the advance works shall commence until a travel plan covering the construction of that work number, which must include details of the expected means of travel to and from the authorised development and any parking to be provided, has been submitted to and, following consultation with the relevant district authorities, approved by the relevant planning authority.

(2) The travel plan (or plans) approved pursuant to paragraph (1) must be implemented in full during the construction of the authorised development.

Traffic Management

11.—(1) No part of each of work numbers 1 to 24 save for the advance works shall commence until the locations and details of the access points for traffic associated with the construction of that work number from the public highway have been submitted to and, following consultation with the relevant district authorities, approved in writing by the relevant planning authority.

(2) All construction traffic shall access the authorised development using an access point approved pursuant to paragraph (1) at all times.

Hours of Working

12.—(1) No construction works, or the delivery or removal of materials shall take place outside the hours of-

- (a) 07:00 to 19:00 hours on Mondays to Fridays (except for Public Holidays); and
- (b) 07:00 to 13:00 hours on Saturdays or on Public Holidays.

(2) Sub-paragraph (1) shall not prevent outside such hours –

- (a) the use of pumping equipment or the carrying out of essential on-site repairs to plant and machinery; and
- (b) construction works, or the delivery or removal of materials carried out with the prior written approval of the relevant planning authority.

Dust and mud on the highway during construction

13.—(1) No part of each of work numbers 1 to 24 save for the advance works shall commence until wheel cleaning facilities have been installed to clean the wheels of all construction vehicles entering the public highway from the site of that work number, the design, specification and locations of which shall first be approved in writing by the relevant planning authority.

(2) The approved facilities shall remain in position and be maintained in full working order and be used by all heavy goods vehicles throughout the construction of the authorised development to minimise the risk that dust, mud or other deleterious matter is transferred to the public highway by vehicles leaving the authorised development.

Dust and mud during construction - air quality

14.—(1) No part of each of work numbers 1 to 24 save for the advance works shall commence until measures relevant to the construction of that work number to minimise the risk of dust or windblown material being carried on to adjacent land have been submitted to and, following consultation with the relevant district authorities, approved in writing by the relevant planning authority.

(2) All heavy goods vehicles carrying material in to or out of the authorised development during the construction of the development shall be securely sheeted unless the load is otherwise enclosed or is not liable to be blown by the wind.

Safeguarding of watercourses and drainage

15.—(1) No part of each of work numbers 1 to 24 save for the advance works shall commence until a written scheme for the provision and implementation of pollution control relevant to the construction of that work number has been submitted to and, following consultation with the relevant district authorities, approved in writing by the relevant planning authority.

(2) The written scheme (or schemes) must include the following which must comply with or include relevant measures or details set out in the environmental statement---

- (a) details of measures for the collection, treatment and disposal of all water entering or arising on the Order land;
 - (b) details of measures for the collection and disposal of foul drainage;
 - (c) details of measures for the storage of any chemicals, oil or fuel.
- (3) The approved scheme (or schemes) must be implemented in full.

Archaeology

16.—(1) No part of each of work numbers 1 to 24 save for the advance works shall commence until a written scheme of archaeological investigation covering the relevant work number has been submitted to and, following consultation with the relevant district authorities, approved in writing by the relevant planning authority.

(2) The authorised development shall be carried out at all times in accordance with the scheme (or schemes) approved under sub-paragraph (1).

(3) Any archaeological remains not previously identified in the written scheme approved pursuant to paragraph 1 or in the environmental statement which are revealed when carrying out the authorised development shall be retained in situ (subject to paragraph 4) and reported to the relevant planning authority in writing within 3 working days.

(4) No construction operations shall take place within 10 metres of such remains for a period of 14 days from the date of such notification unless otherwise agreed in writing by the relevant planning authority.

(5) If the relevant planning authority confirm in writing to the undertaker during the 14 day period referred to in paragraph (4) that the archaeological remains require further investigation, then no construction operations shall take place within 10 metres of the remains until provision has been made for the investigation and recording of the remains in accordance with details first submitted to and approved by the relevant planning authority.

Site waste management plan

17.—(1) No part of each of work numbers 1 to 24 save for the advance works shall commence until a Site Waste Management Plan (SWMP) covering the relevant work number has been submitted to and, following consultation with the relevant district authorities, approved in writing by the relevant planning authority.

(2) All construction works must be undertaken in accordance with the approved SWMP(s).

Control of emissions during construction

18.—(1) No part of each of work numbers 1 to 24 save for the advance works shall commence until a written scheme covering the construction of that work number for the management and mitigation or emissions from the authorised development of-

- (i) odour;
- (ii) artificial light; and
- (iv) smoke.

has been submitted to and, following consultation with the relevant district authorities, approved in writing by the relevant planning authority.

(2) All construction works must be undertaken in accordance with the schemes approved pursuant to paragraph (1).

Construction environmental management plan

19.—(1) No part of each of work numbers 1 to 24 save for the advance works shall commence until a Construction Environment Management Plan (CEMP) covering the relevant work number has been submitted to and, following consultation with the relevant district authorities, approved in writing by the relevant planning authority.

(2) Any CEMP must reflect the details of controls on construction operations approved under other requirements and must reflect the draft CEMP submitted within Volume 1 of the environmental statement.

- (3) All construction works must be undertaken in accordance with the approved CEMP(s).

Construction of highway works affecting the Trunk Road network

20.—(1) All highway works (including their construction) that directly affect the Trunk Road network, must comply in all respects with the relevant requirements of the Design Manual for Roads and Bridges.

Fencing and other means of enclosure

21.—(1) No part of each of work numbers 1 to 24 save for the advance works shall commence until written details of all proposed permanent and temporary fences, walls and other means of enclosure relevant to that work number have been submitted to and approved in writing by the relevant planning authority.

(2) The approved temporary fencing or enclosure must be erected in accordance with the details approved pursuant to paragraph (1) and must be retained throughout the construction of the relevant work number.

(3) Any temporary fencing must be removed on completion of the authorised development.

(4) The approved permanent fencing or enclosure must be erected in accordance with the details approved pursuant to paragraph (1) prior to the relevant part of the authorised development being opened to the public for use.

Operational noise attenuation measures and their on-going maintenance

22.—(1) The authorised development must not be brought into use until a written scheme detailing operational noise management and attenuation measures, and their ongoing maintenance, has been submitted to and, following consultation with the relevant district authorities, approved in writing by the relevant planning authority.

(2) The authorised development must be operated in accordance with the approved operational noise management and attenuation details.

Public Rights of Way

23.—(1) No public right of way to be closed or diverted during the construction of or as part of the construction or operation of the authorised development shall be closed or diverted before the relevant local planning authority has given its written approval to the details of the relevant closure or diversion.

(2) All public rights of way closures and diversions shall be carried out in accordance with the details approved pursuant to paragraph (1).

Alternative Route for Marriott's Way

24.—(1) Prior to the closure of Marriott's Way to the public the undertaker shall provide a reasonable alternative route so as to permit the passage of pedestrians, cyclists and equestrians, between the two points at which Marriott's Way is to be temporarily closed during construction of the authorised development, such alternative route to be first approved in writing by the relevant planning authority.

(2) The undertaker shall provide the alternative route approved pursuant to paragraph (1) from the date on which Marriott's Way is closed to the public until the date on which the replacement land for the first area of Marriott's Way is provided and open to the public, subject to the undertaker being permitted to:

- (a) cross the alternative route including with vehicles, plant and machinery;
- (b) temporarily close the alternative route for the purposes of health and safety or in case of emergency; and

- (c) temporarily close the alternative route for the purposes of works requiring its closure, and in relation to which the undertaker shall give notice in accordance with paragraph (3) and the undertaker shall seek to minimise the number and extent of closures under this paragraph (c).

(3) If the undertaker is to temporarily close the alternative route under paragraph (2)(c) above it shall, at least 3 days prior to any closure, erect notices advising of the closure of the alternative route, such notices to state the date of the closure and the date the alternative route will be re-opened, and to be erected at the end points of the closure and at such other points at which public users of the way would need to depart from their route if wishing to make a through route journey between Pendlesham Rise and Fir Covert Road.

Surface water drainage

25.—(1) No part of each of work numbers 1 to 24 save for the advance works shall commence until a detailed surface water drainage strategy for the relevant work numbers has been submitted to and, following consultation with the relevant district authorities, approved by the relevant planning authority.

(2) The authorised development must be constructed in accordance with the approved surface water drainage strategy, including any timetable or programme approved within it.

Amendments to approved details

26. With respect to any requirement which requires the approval of any details, plans or schemes (“Approved Details, Plans or Schemes”) by the relevant planning authority, the undertaker may submit to the relevant planning authority for approval any amendments to the Approved Details, Plans or Schemes and following any further approval by the relevant planning authority the Approved Details, Plans or Schemes shall be taken to include the amendments approved pursuant to this requirement 26.

SCHEDULE 3

STREETS SUBJECT TO PERMANENT ALTERATION OF LAYOUT

Article 8

<i>(1)</i> <i>Street Plans Number/Title/Area</i>	<i>(2)</i> <i>Street subject to alteration of layout</i>	<i>(3)</i> <i>Description of alteration</i>
<p>Street Plans (Sheet 1 of 12)/ Fakenham Road/</p> <p>In the Parishes of Attlebridge, and Taverham</p> <p>In the District of Broadland</p> <p>In the County of Norfolk</p>	<p>A1067 Fakenham Road</p>	<p>(i) An increase in width, and the realignment of its carriageway and verges, on its north east side, from a point 295 metres north west of its junction with Attlebridge Restricted Byway No.3, north westwards for 935 metres, including the provision of a new roundabout junction ('Fakenham Road Roundabout'), as the westerly commencement point of the NDR classified road, at a point 380 metres north west of its junction with Attlebridge Restricted Byway No.3;</p> <p>(ii) The provision of footways/cycleways as part of, and around the south and north west arcs of the carriageway of, Fakenham Road Roundabout, to connect with the eastern tie-in of the A1067 Fakenham Road, on its north westerly approach to that roundabout, and with the diverted route of Attlebridge Restricted Byway No.3 (A on the Street Plans (Sheet 1 of 12)), where it connects with the north arc of the Fakenham Road Roundabout;</p> <p>(iii) The reconfiguration of that part of its redundant carriageway, within the length described in (i) above, to provide verge, together with other verge alterations within that length.</p>
	<p>Attlebridge Restricted Byway No.3</p>	<p>(i) The provision of a diverted length of Restricted Byway (A on the Street Plans (Sheet 1 of 12)), which will provide a new southerly connection for Attlebridge Restricted Byway No.3 with the A1067 Fakenham Road Roundabout.</p>

SCHEDULE 5

CLASSIFICATION OF ROADS

Article 11

PART 1

The New A47 Trunk Road Postwick Interchange Slip Roads

1. New A47 Trunk Road Eastbound Diverge Slip Road: A new, bifurcated, slip road, from a point on the existing A47 Trunk Road eastbound diverge slip road, where it is proposed to be improved, at Postwick Interchange, 250 metres generally east of where the A47 Trunk Road crosses over the Norwich to Yarmouth & Lowestoft Railway line, extending generally eastwards to connect –

- (a) for its first bifurcated part with the NDR classified road Postwick North East Roundabout; and
- (b) for its second bifurcated part with the northbound carriageway of the NDR classified road, some 60 metres north of the NDR classified road Postwick North East Roundabout,

identified on the street plans ((Sheet 12 of 12)/Smee Lane and Postwick Interchange) by the symbol indicated on those plans for ‘The New A47 Trunk Road Postwick Interchange Slip Roads’ and annotated on that sheet as ‘New A47 Trunk Road Eastbound Diverge Slip Road’, and as is identified on the Classification of Highways Plan by a solid green line.

2. New A47 Trunk Road Eastbound Merge Slip Road: A new slip road, from the NDR classified road Postwick North East Roundabout, extending eastwards to connect with the existing A47 Trunk Road eastbound merge slip road, where it is proposed to be improved, at a point 125 metres west of the private access to ‘The Grange’,

identified on the street plans ((Sheet 12 of 12)/Smee Lane and Postwick Interchange) by the symbol indicated on those plans for ‘The New A47 Trunk Road Postwick Interchange Slip Roads’ and annotated on that sheet as ‘New A47 Trunk Road Eastbound Merge Slip Road’, and as is identified on the Classification of Highways Plan by a solid green line.

PART 2

The NDR Classified Road

A 19.8 kilometre highway, to be constructed as the A1270 Principal Road –

- (a) commencing from its junction with the proposed roundabout, which will be constructed as an improvement of the A1067 Fakenham Road (‘Fakenham Road Roundabout’), 390 metres west north-west of its junction with Attlebridge Restricted Byway No.3;
- (b) then extending in a generally north easterly, then easterly, direction to its at-grade roundabout junction with the C262 Fir Covert Road (‘Fir Covert Road Roundabout’), situated to the north of the Taverham Garden Centre and to the south of the property ‘Chestnut House’;
- (c) then extending generally eastwards, crossing under Marriott’s Way, then crossing and severing Furze Lane (U57168)/Breck Farm Lane (U57168), to the south of the property ‘The Warren’, to its at-grade roundabout junction with the C261 Reepham Road (‘Reepham Road Roundabout’), 450 metres north west of the junction of the C261 Reepham Road with Drewray Drive (U51248);
- (d) then extending east south-eastwards, crossing under Bell Farm Track/Horsford Restricted Byway No.5, midway along its length, to its at-grade roundabout junction (‘Drayton Lane Roundabout’), with two new highway connections to the B1149 Holt Road and the C261 Reepham Road which

will replace the former C282 Drayton Lane, just to the south west of the property 'The Homestead';

- (e) then continuing east south-eastwards to its grade-separated dumb-bell interchange, incorporating two eastbound diverge and merge slip roads connecting with the A140 Cromer Road Roundabout North, just to the south of New Holme Farm, and two westbound diverge and merge slip roads connecting with the A140 Cromer Road Roundabout South, and with the B1149 Holt Road (also to become the A1270), respectively, just to the north of Manor Park Sports Club;
- (f) then continuing eastwards, passing to the south of the City of Norwich Aviation Museum and to the north of the Norwich International Airport Control Tower, then north eastwards, to its roundabout junction at the north west corner of Norwich International Airport ('Airport Roundabout'), 160 metres north east of The Petans Training Centre at Bullock Hill;
- (g) then turning south eastwards, crossing and severing Quaker Lane (U57188) and the C251 St Faiths Road where those two highways connect, then eastwards, crossing under the new and realigned C246 Buxton Road, to the north east of No. 318 Buxton Road and to the south of Quaker Lane (U57188), then north eastwards, to its at-grade roundabout junction with the B1150 North Walsham Road ('North Walsham Road Roundabout'), to the north of the HFG Farm Shop and Garden Centre;
- (h) then extending eastwards, then east south-eastwards, to its at-grade roundabout junction with the A1151 Wroxham Road ('Wroxham Road Roundabout'), 140 metres south west of its junction with Sloe Lane (U57095);
- (i) then extending generally south eastwards, crossing under a proposed private access/bridleway bridge, 200 metres south west of the junction of Newman Road (U57490) with Long's Crescent (U57852), to its at-grade roundabout junction with the C283 Salhouse Road ('Salhouse Road Roundabout'), 310 metres south west of its crossroads junction with the C258 Green Lane East and C258 Green Lane West;
- (j) then continuing south eastwards, crossing over, by bridges, the Norwich to Cromer & Sheringham railway line and the C874 Plumstead Road, just to the north east of the existing railway crossing on the C874 Plumstead Road, to its new roundabout junction ('Plumstead Road Roundabout South'), with a new connecting Link Road with, and 270 metres south east of, the improved C874 Plumstead Road;
- (k) then extending generally southwards, crossing under the C442 Middle Road, just to the west of Oaks Farm;
- (l) then continuing southwards, crossing and severing Low Road (U59392), 70 metres to the west of the curtilage of the property 'The Red House';
- (m) then continuing southwards, crossing and severing Smee Lane (U59400), 90 metres west of the curtilage of Apple Tree Farm;
- (n) then continuing south south-eastwards to a new roundabout junction ('Business Park Roundabout'), 550 metres east of the C829/C830 Broadland Way/C831 Peachman Way Roundabout;
- (o) then turning south westwards to a new roundabout junction ('Postwick North East Roundabout'), on the northern side of the A47 Trunk Road Norwich Southern Bypass; and

- (p) then continuing south westwards, on overbridge across the A47 Trunk Road Norwich Southern Bypass, terminating at its junction with the A1042 Yarmouth Road, where it is to be improved to provide a signalised junction, just east of the Postwick Park and Ride Site,

identified on the street plans, by the symbol indicated on those plans for ‘The NDR classified road’, and as is identified on the Highway Classifications Plan by a solid red line.

PART 3

Holt Road

A 200 metre length of the B1149 Holt Road, to be classified as the A1270 Principal Road, as extends north westwards from its junction with the A140 Cromer Road roundabout junction (‘Cromer Road Roundabout South’),

identified by cross hatching on the street plans ((Sheet 5 of 12)/Cromer Road Interchange to Old Norwich Road), as the north westerly arm off the Cromer Road Roundabout South, and as is identified on the Highway Classifications Plan by a red pecked line.

PART 4

The A140 Cromer Road Classified Road

A 450 metre length of new highway, to be constructed as the A140 Principal Road, from its junction with the B1149 Holt Road/A140 Cromer Road roundabout junction (‘Cromer Road Roundabout South’), extending generally northwards, and incorporating a new roundabout (‘Cromer Road Roundabout North’) at a point 280 metres north along its length, to its junction with the existing A140 Cromer Road, at a point 110 metres north of its junction with the unnamed highway (Cromer Road to West Lane (U57647)),

identified on the street plans ((Sheet 5 of 12)/Cromer Road Interchange to Old Norwich Road) as new highway W, and as is identified on the Highway Classifications Plan by a solid pink line.

PART 5

The Broadland Gate Link Road

- (a) A 550 metre length of new highway (‘Broadland Gate Link Road’), to be constructed as the A1194 Principal Road, from its junction with the C829/C830 Broadland Way/C831 Peachman Way roundabout junction, extending eastwards to its junction with the NDR classified road Business Park Roundabout,

identified on the street plans ((Sheet 12 of 12)/Smee Lane and Postwick Interchange) as new highway SS, and as is identified on the Highway Classifications Plan by a solid purple line.

Broadland Way

- (b) A 385 metre length, being the whole of the C829 Broadland Way, to be classified as the A1194 Principal Road, from its junction with the A1042 Yarmouth Road roundabout junction (‘Postwick North West Roundabout’), extending northwards to and including its roundabout junction with the C830 Broadland Way North and C831 Peachman Way,

as appears on the street plans ((Sheet 12 of 12)/Smee Lane and Postwick Interchange), and as is identified on the Highway Classifications Plan by a pecked purple line.

SCHEDULE 6

Article 12

In relating this Schedule 6 to its corresponding Street Plans, the provisions described herein are shown on the Street Plans in the following manner –

- (a) Streets to be stopped up, described in column (3) of Part 1 of this Schedule, are shown by thick black hatching, over the extent of stopping up described in column (4) of that Part;
- (b) New Streets to be substituted for a Street to be stopped up, or are otherwise to be provided, other than the NDR classified road and/or the New A47 Trunk Road Eastbound Diverge Slip Road and the New A47 Trunk Road Eastbound Merge Slip Road in relation to which those other new Streets are to be constructed, as are included in column (5) of Part 1 of this Schedule, are shown by stipple and given a reference letter(s), and will be a road unless the word “Bridleway”, “Cycle Track with a right of way on foot” or “Restricted Byway” appears in brackets beneath its reference letter in that column;
- (c) Private Accesses to be stopped up, described in column (3) of Parts 2 and 3 of this Schedule, are shown by a solid black band, over the extent of stopping up described in column (4) of each of those Parts, and are given a reference number, preceded by ‘PMA’, commencing with ‘PMA 0’; and
- (d) New Private Accesses to be substituted for a Private Access to be stopped up, or are otherwise to be provided in relation to the NDR classified road and/or the New A47 Trunk Road Eastbound Diverge Slip Road and the New A47 Trunk Road Eastbound Merge Slip Road, as are included in column (5) of Part 2 of this Schedule, are shown by thin diagonal hatching, and are given a reference number, preceded by ‘X’, commencing with ‘X0’.

STREETS TO BE STOPPED UP

SCHEDULE 7

PUBLIC RIGHTS OF WAY

Article 13

PART 1

Attlebridge Restricted Byway No.3

- (a) That length of Attlebridge Restricted Byway No.3, from its junction with the A1067 Fakenham Road, extending north westwards for a distance of 386 metres, shown by thick black diagonal hatching on the Street Plans ((Sheet 1 of 12)/Fakenham Road).
- (b) An alternative section of Attlebridge Restricted Byway No.3, to be co-existent with a private means of access to premises, from the proposed Fakenham Road Roundabout on the A1067 Fakenham Road, extending east north-eastwards, then north westwards, for a distance of 315 metres, shown by stipple and given the reference letter A on the Street Plans ((Sheet 1 of 12)/Fakenham Road – Inset 1/2).

PART 2

Drayton Restricted Byway No.6

- (a) That length of Drayton Restricted Byway No.6, from its junction with the C261 Reepham Road, extending north eastwards for a distance of 90 metres, shown by thick black diagonal hatching on the Street Plans ((Sheet 3 of 12)/Reepham Road to Bell Farm Track).
- (b) An alternative section of Drayton Restricted Byway No.6, to be co-existent with a private means of access to premises, from the NDR classified road Reepham Road Roundabout, extending generally north eastwards, for a distance of 70 metres, shown by stipple and given the reference letter J on the Street Plans ((Sheet 3 of 12)/Reepham Road to Bell Farm Track).

PART 3

Horsford Restricted Byway No.5

- (a) The whole of Horsford Restricted Byway No.5, from its junction with the C261 Reepham Road, generally northwards to its junction with Dog Lane (U57176), a distance of 736 metres, shown by thick diagonal hatching on the Street Plans ((Sheet 3 of 12)/Reepham Road to Bell Farm Track).
- (b) An alternative section of Horsford Restricted Byway No.5, to be co-existent with a private means of access to premises, from the same point at its junction with the C261 Reepham Road as its former route, extending generally northwards, deviating from its former route along its central section, to its junction with Dog Lane (U57176) at the same point as its former route, shown by stipple and given the reference letter K on the Street Plans ((Sheet 3 of 12)/Reepham Road to Bell Farm Track – Inset 3/3).

SCHEDULE 8

TEMPORARY PROHIBITION OR RESTRICTION OF THE USE OF STREETS

Article 14

In relating this Schedule 8 to its corresponding street plans, the lengths of street to be subject to temporary prohibition or restriction of driving/use, as described in column (4) of this Schedule, are given a reference number, preceded by 'TEMP TR', commencing with 'TEMP TR 1', and that reference appears in column (4) at the end of the described length.

<i>(1)</i> Street Plans Number/Title	<i>(2)</i> Area	<i>(3)</i> Temporary prohibition or restriction of use of streets	<i>(4)</i> Extent of temporary prohibition or restriction of use of streets
Street Plans (Sheet 1 of 12)/ Fakenham Road	In the Parishes of Attlebridge, and Taverham In the District of Broadland In the County of Norfolk	A1067 Fakenham Road <i>Prohibition and/or restriction of driving/use, as will be directed by traffic signs/signal control.</i>	1.1 <u><i>Prohibition/Restriction:</i></u> From its junction with Attlebridge Restricted Byway No.4, south eastwards for 1,120 metres, to where it meets the north western boundary of the curtilage of the property 'Peacehaven' (marked TEMP TR 1 on the Street Plans (Sheet 1 of 12)). Access to and from frontage properties (1 & 2 Old Hall Cottages, 'Woodstock', Old Hall Farm, and Agricultural Access opposite to 'Woodstock') will be maintained at all times. <u><i>Purpose of Prohibition/Restriction:</i></u> Works are proposed to be executed on or near that length of street, which will provide the north westerly most tie-in point of the A1067 Fakenham Road highway improvement with the NDR classified road. <u><i>Alternative Route:</i></u> An alternative route between the two end points marked TEMP TR 1 on the Street Plans (Sheet 1 of 12) will be available (including, in part, an area of non-highway land on the north eastern side of the existing carriageway for temporary use for traffic management purposes), for the purpose of continuity of use by two-way directional traffic.
Street Plans (Sheet 2 of 12)/ Fir Covert Road to Breck Farm Lane and Marriott's Way	In the Parishes of Attlebridge, and Taverham In the District of Broadland In the County of Norfolk	C262 Fir Covert Road <i>Prohibition and/or restriction of driving/use, as will be directed by traffic signs/signal control.</i>	2.1 <u><i>Prohibition/Restriction:</i></u> From a point 18 metres south south-west of its junction with the access to the property 'Fir Covert', south south-westwards for 375 metres (marked TEMP TR 2 on the Street Plans (Sheet 2 of 12)). <u><i>Purpose of Prohibition/Restriction:</i></u> Works are proposed to be executed on or near that length of street, which will provide its

SCHEDULE 9
CONSTRUCTION ACCESS TO AND FROM WORKS

Article 15

<i>(1)</i> <i>Area</i>	<i>(2)</i> <i>Description of access</i>
In the District of Broadland In the County of Norfolk	Access from the A1067 Fakenham Road (from the location of the proposed Fakenham Road Roundabout) to travel east along the line of the NDR classified road.
	Access from the southern length, leading off the A1067 Fakenham Road, of the C262 Fir Covert Road (from the location of the proposed Fir Covert Road Roundabout), to travel east and west along the line of the NDR classified road.
	Access along Furze Lane (U57168) to the Marriott's Way bridge compound.
	Access along Breck Farm Lane (U57168) in order to construct the turning head on that lane at Breck Farm.
	Access from the south side of the C261 Reepham Road (from the location of the proposed Reepham Road Roundabout) to travel east and west along the line of the NDR classified road.
	Access along Bell Farm Track (private means of access/Horsford Restricted Byway No.5) from the C261 Reepham Road to the compound on the south west side of the proposed bridge crossing of the access and restricted byway over the NDR classified road.
	Access along the C282 Drayton Lane from the C261 Reepham Road to travel (from the location of the proposed Drayton Lane Roundabout) east and west along the line of the NDR classified road and to access the compound situated north west of the aforementioned roundabout.
	Access along the B1149 Holt Road from its junction with A140 Cromer Road in order to construct the new junction with the new Drayton Lane Link Road and the turning head on the B1149 Holt Road at what is to become its south east termination point on the north side of the NDR classified road.
	Access from the A140 Cromer Road along the route of the private means of access (from Cromer Road Roundabout North) to the compound situated on Norwich International Airport land.
	Access along the A140 Cromer Road and the B1149 Holt Road (from the location of the proposed NDR Cromer Road grade separated junction) to access west along the line of the NDR classified road and east to the new Cromer Road overbridge.
	Access along Holly Lane (U57142) to construct the turning head on that lane at Manor Farm.
	Access along the C251 Bullock Hill to construct the turning head on that street at what is to become its south east termination point on the north side of the NDR classified road.
	Access along Quaker Lane (U57188) to construct the turning head on that street at what is to become its westerly termination point on the north side of the NDR classified road.
Access along the C251 St Faiths Road to construct the turning head on that street at what is to become its northerly termination point on the south side of the NDR classified road.	
Access along the C246 Buxton Road from the south to travel (from the location of the Buxton Road overbridge crossing) east and west along the line of the NDR classified road.	

<i>(1)</i> <i>Area</i>	<i>(2)</i> <i>Description of access</i>
In the District of Broadland In the County of Norfolk (cont.)	Access from the southern length of the C246 Buxton Road to the bridge compound and batching plant.
	Access along the B1150 North Walsham Road from the south to travel (from the location of the proposed North Walsham Road Roundabout) east and west along the line of the NDR classified road.
	Access along the A1151 Wroxham Road from the south to travel (from the location of the proposed Wroxham Road Roundabout) north west and south south-east along the line of the NDR classified road.
	Access from the C258 Green Lane West and Newman Road (U57852) to Gazebo Farm office and the bridge compound.
	Access along the C283 Salhouse Road from the C258 Green Lane West/Green Lane East to travel (from the location of the proposed Salhouse Road Roundabout) north west and south south-east along the line of the NDR classified road.
	Access along the C874 Plumstead Road from the C258 Broad Lane to the temporary compounds, east and west of the NDR classified road, and (from the location of the proposed Plumstead Road Roundabout North) to provide access south towards the proposed Plumstead Road Roundabout South.
	Access along the C442 Middle Road to the bridge compound on the south side of the lane and on the east side of the NDR classified road and to the new Middle Road overbridge.
	Access along Low Road (U59392) to construct the turning heads on that street on each side of the NDR classified road.
	Access along Smee Lane (U59400) in order to construct the turning heads on that street on each side of the NDR classified road.
	Access from the C830 Broadland Way at the C829/C830 Broadland Way/C831 Peachman Way roundabout east towards the Broadland Gate Roundabout.
	Access from the C830 Broadland Way at the Postwick North West Roundabout to the new A47(T) eastbound diverge slip road.
	A47(T) Eastbound Diverge Slip Road - access from the slip road along the route of the new slip road.
	A47(T) Eastbound Diverge Slip Road - access from the slip road to construct the north pier of the new A47(T) overbridge.
	Access along Oaks Lane (U59329) to the site compound on the proposed park and ride site.
Access along the A1042 Yarmouth Road to construct the south pier and abutment of the new A47(T) overbridge and the new signalised controlled junction with the park and ride site and to the existing Postwick Bridge.	

SCHEDULE 10

LAND IN WHICH ONLY NEW RIGHTS ETC. MAY BE ACQUIRED

Article 24

(1) Land Plans Number/Title	(2) Number of land shown on Land Plan	(3) Purpose for which Rights over the land may be acquired
Land Plans (Sheet 2 of 12)/ Fir Covert Road to Breck Farm Lane and Marriott's Way	Plot 2/26	The right to regrade/elevate land of the Marriott's Way recreational public amenity path, so as to raise its levels to meet with its new bridge crossing of the NDR classified road.
	Plot 2/28	The right to regrade/elevate land of the Marriott's Way recreational public amenity path, so as to raise its levels to meet with its new bridge crossing of the NDR classified road.
	Plot 2/29	The right to construct and retain a length of private access track across the Marriott's Way recreational public amenity path.
Land Plans (Sheet 9 of 12)/ Wroxham Road and Wroxham Road/Green Lane West Junction Improvement	Plot 9/5	The right to construct, inspect, and maintain a drainage ditch.
Land Plans (Sheet 10 of 12)/ Newman Road, Salhouse Road and Railway Crossing	Plot 10/40	The right to construct, inspect, and maintain a bridge to carry the NDR classified road over the Norwich to Cromer & Sheringham Railway line.
Land Plans (Sheet 12 of 12)/ Smee Lane and Postwick Interchange	Plot 12/41	The right to undertake, inspect, and maintain street alterations (improvements) on the existing A1042 Yarmouth Road overbridge structure of the A47(T) Norwich Southern Bypass.
	Plot 12/42	The right to construct, inspect, and maintain a bridge, to carry the NDR classified road over the A47(T) Norwich Southern Bypass.

SCHEDULE 11

Article 24

MODIFICATION OF COMPENSATION AND COMPULSORY PURCHASE ENACTMENTS FOR CREATION OF NEW RIGHTS

Compensation enactments

1. The enactments for the time being in force with respect to compensation for the compulsory purchase of land shall apply, with the necessary modifications as respects compensation, in the case of a compulsory acquisition under this Order of a right by the creation of a new right as they apply as respects compensation on the compulsory purchase of land and interests in land.

2.—(1) Without prejudice to the generality of paragraph 1, the Land Compensation Act 1973 shall have effect subject to the modifications set out in sub-paragraph (2) and (3).

(2) In section 44(1) (compensation for injurious affection), as it applies to compensation for injurious affection under section 7 of the 1965 Act as substituted by paragraph 4—

- (a) for the words “land is acquired or taken” there shall be substituted the words “a right or restrictive covenant over land is purchased from or imposed on”; and
- (b) for the words “acquired or taken from him” there shall be substituted the words “over which the right is exercisable or the restrictive covenant enforceable”.

(3) In section 58(1) (determination of material detriment where part of house etc. proposed for compulsory acquisition), as it applies to determinations under section 8 of the 1965 Act as substituted by paragraph 5—

- (a) for the word “part” in paragraph (a) and (b) there shall be substituted the words “a right over or restrictive covenant affecting land consisting”;
- (b) for the word “severance” there shall be substituted the words “right or restrictive covenant over or affecting the whole of the park or garden”;
- (c) for the words “part proposed” there shall be substituted the words “right or restrictive covenant proposed”; and
- (d) for the words “part is” there shall be substituted the words “right or restrictive covenant is”.

Application of the 1965 Act

3.—(1) The 1965 Act shall have effect with the modifications necessary to make it apply to the compulsory acquisition under this Order of a right by the creation of a new right, or to the imposition under this Order of a restrictive covenant, as it applies to the compulsory acquisition under this Order of land, so that, in appropriate contexts, references in that Act to land are read (according to the requirements of the particular context) as referring to, or as including references to—

- (a) the right acquired or to be acquired; or
- (b) the land over which the right is or is to be exercisable.

(2) Without prejudice to the generality of sub-paragraph (1), Part 1 of the 1965 Act shall apply in relation to the compulsory acquisition under this Order of a right by the creation of a new right with the modifications specified in the following provisions of this Schedule.

4. For section 7 of the 1965 Act (measure of compensation) there shall be substituted the following section—

“7. In assessing the compensation to be paid by the acquiring authority under this Act, regard shall be had not only to the extent (if any) to which the value of the land over which the right is to be acquired or the restrictive covenant is to be imposed is depreciated by the acquisition of the right or the imposition of the covenant but also to the damage (if any) to be sustained by the owner of the land by reason of its severance from other land of the owner, or injuriously affecting that other land by the exercise of the powers conferred by this or the special Act.”.

5. For section 8 of the 1965 Act (provisions as to divided land) there shall be substituted the following section—

“8.—(1) Where in consequence of the service on a person under section 5 of this Act of a notice to treat in respect of a right over land consisting of a house, building or manufactory or of a park or garden belonging to a house (“the relevant land”)—

- (a) a question of disputed compensation in respect of the purchase of the right or the imposition of the restrictive covenant would apart from this section fall to be determined by the Upper Tribunal (“the tribunal”); and
- (b) before the tribunal has determined that question the tribunal is satisfied that the person has an interest in the whole of the relevant land and is able and willing to sell that land and—
 - (i) where that land consists of a house, building or manufactory, that the right cannot be purchased or the restrictive covenant imposed without material detriment to that land; or
 - (ii) where the land consists of such a park or garden, that the right cannot be purchased or the restrictive covenant imposed without seriously affecting the amenity or convenience of the house to which that land belongs,

The Norwich Northern Distributor Road (A47 to A1067) Order 201[](a)(“the Order”) shall, in relation to that person, cease to authorise the purchase of the right and be deemed to authorise the purchase of that person’s interest in the whole of the relevant land including, where the land consists of such a park or garden, the house to which it belongs, and the notice shall be deemed to authorise the purchase of that person’s interest in the whole of the relevant land including, where the land consists of such a park or garden, the house to which it belongs, and the notice shall be deemed to have been served in respect of that interest on such date as the tribunal directs.

(2) Any question as to the extent of the land in which the Order is deemed to authorise the purchase of an interest by virtue of subsection (1) of this section shall be determined by the tribunal.

(3) Where in consequence of a determination of the tribunal that it is satisfied as mentioned in subsection (1) of this section the Order is deemed by virtue of that subsection to authorise the purchase of an interest in land, the acquiring authority may, at any time within the period of 6 weeks beginning with the date of the determination, withdraw the notice to treat in consequence of which the determination was made; but nothing in this subsection prejudices any other power of the authority to withdraw the notice.”.

6. The following provisions of the 1965 Act (which state the effect of a deed poll executed in various circumstances where there is no conveyance by persons with interests in the land), that is to say—

- (a) section 9(4) (failure by owners to convey);
- (b) paragraph 10(3) of Schedule 1 (owners under incapacity);
- (c) paragraph 2(3) of Schedule 2 (absent and untraced owners); and
- (d) paragraphs 2(3) and 7(2) of Schedule 4 (common land),

shall be so modified as to secure that, as against persons with interests in the land which are expressed to be overridden by the deed, the right which is to be compulsorily acquired or the restrictive covenant which is to be imposed is vested absolutely in the acquiring authority.

7. Section 11 of the 1965 Act (powers of entry) shall be so modified as to secure that, as from the date on which the acquiring authority has served notice to treat in respect of any right it has power, exercisable in equivalent circumstances and subject to equivalent conditions, to enter for the purpose of exercising that right or enforcing that restrictive covenant (which shall be deemed for this purpose to have been created on that date of service of the notice); and sections 12 (penalty for unauthorised entry) and 13 (entry on warrant in the event of obstruction) of the 1965 Act shall be modified correspondingly.

8. Section 20 of the 1965 Act (protection for interests of tenants at will, etc.) shall apply with the modifications necessary to secure that persons with such interests in land as are mentioned in that section are compensated in a manner corresponding to that in which they would be compensated on a compulsory acquisition under this Order of that land, but taking into account only the extent (if any) of such interference with such an interest as is actually caused, or likely to be caused, by the exercise of the right or the enforcement of the restrictive covenant in question.

9. Section 22 of the 1965 Act (protection of acquiring authority's possession where by inadvertence an estate, right or interest has not been got in) shall be so modified as to enable the acquiring authority, in circumstances corresponding to those referred to in that section, to continue to be entitled to exercise the right acquired, subject to compliance with that section as respects compensation.

Rackheath and Salhouse	C283 Salhouse Road From a point 100 metres south-west of its junction with the C258 Green Lane East north-eastwards to a point 470 metres northeast of its junction with the U51493 Eva Road.	The Norfolk County Council (Rackheath, Salhouse Road (No.2)) (30 mph Speed Limit) Order 2005 (3848)
Postwick with Witton and Thorpe St. Andrew	A47 (eastbound slip road leaving the A47) From its junction with the A1042 flyover northern roundabout for a distance of 60 metres in a southerly direction.	The Norfolk County (Postwick and Thorpe St. Andrew, A1042 Yarmouth Road) (40 mph Speed Limit) Order 1999. (2589)
	A1042 Yarmouth Road From a point 87 metres east of its junction with the A1042 flyover southern roundabout to a point 7 metres west of the centreline of Griffin Lane.	The Norfolk County (Postwick and Thorpe St. Andrew, A1042 Yarmouth Road) (40 mph Speed Limit) Order 1999. (2589)
	The carriageway forming the northern arm of the A1042 flyover northern roundabout From its junction with the A1042 flyover northern roundabout to the roundabout junction located approximately 360 metres to the north The roundabout junction located approximately 360 metres north of the A1042 flyover northern roundabout.	The Norfolk County (Postwick and Thorpe St. Andrew, A1042 Yarmouth Road) (40 mph Speed Limit) Order 1999. (2589)
	A1042 Yarmouth Road – north east side From a point 18 metres south-east of the A1042 northern flyover roundabout in a south easterly direction for 160 metres.	The Norfolk County (Postwick and Thorpe St. Andrew, A1042) (Cycle Lane) Order 1999. (2552)
	A1042 Yarmouth Road – north east side From a point 13 metres south-east of the A1042 northern flyover roundabout in a south easterly direction for 165 metres.	The Norfolk County (Postwick and Thorpe St. Andrew, A1042) (Cycle Lane) Order 1999. (2552)

PART 4

WEIGHT LIMIT VARIATIONS

Parish	Road name, number and length	Title of Order	Variation
Spixworth and Crostwick	U57188 Quaker Lane For its entire length	The Norfolk County Council (Horsham St Faiths and Newton St Faiths, Hainford, Frettenham, Spixworth, Old Catton and Horstead with Stanninghall) (7.5T Weight Restriction) Order 2006. (4042)	U57188 Quaker Lane From its junction with the C246 Buxton Road westwards to its western end where it meets the northern side of the NDR classified road.
Spixworth and Crostwick and Old Catton	C251 St Faiths Road From its junction with the U57188 Quaker Lane to its junction with the U57057 Lodge Lane	The Norfolk County Council (Horsham St Faiths and Newton St Faiths, Hainford, Frettenham, Spixworth, Old Catton and Horstead with Stanninghall) (7.5T Weight Restriction) Order 2006. (4042)	C251 St Faiths Road From its junction with the U57057 Lodge Lane northwards to its northern most end where it meets the southern side of the NDR classified road.
Great and Little Plumstead	U59392 Low Road For its entire length	The Norfolk County Council (Thorpe St Andrew, Great and Little Plumstead, Postwick with Witton, Blofield, Hemblington, Woodbastwick, Lingwood and Burlingham and South Walsham) (7.5T Weight Restriction) Order 2007 (4208)	U59392 Low Road From its junction with the C258 Church Road westwards to its western most end where it meets the eastern side of the NDR classified road. U59392 Low Road From its junction with the U59278 Green Lane North eastwards to its eastern most end, where it meets the western side of the NDR classified road.
	U59400 Smea Lane For its entire length	The Norfolk County Council (Thorpe St Andrew, Great and Little Plumstead, Postwick with Witton, Blofield, Hemblington, Woodbastwick, Lingwood and Burlingham and South Walsham) (7.5T Weight Restriction) Order 2007 (4208)	U59400 Smea Lane From its junction with the C258 Church Road westwards to its western most end where it meets the eastern side of the NDR classified road. U59400 Smea Lane From its junction with the C830 Broadland Way eastwards to its eastern most end, where it meets the western side of the NDR classified road.

PROCEDURE FOR DISCHARGE OF REQUIREMENTS

Applications made under requirements

1. (1). Where an application has been made to the relevant planning authority for any consent, agreement or approval required by a requirement included in this Order the relevant planning authority shall give notice to the undertaker of their decision on the application within a period of eight (8) weeks beginning with:

- (a) the day immediately following that on which the application is received by the authority;
- (b) the day immediately following that on which further information has been supplied by the undertaker under paragraph 2; or
- (c) such longer period as may be agreed by the undertaker and the relevant planning authority in writing.

(2) Subject to sub-paragraph (3), in the event that the relevant planning authority does not determine an application within the period set out in sub-paragraph (1), the relevant planning authority shall be taken to have granted the application (without any condition or qualification) at the end of that period.

(3) Where:

- (a) an application has been made to the relevant planning authority for any consent, agreement or approval required by a requirement included in this Order; and
- (b) the relevant planning authority does not determine such application within the period set out in sub-paragraph (1); and
- (c) such application is accompanied by a report that considers it likely that the subject matter of such application will give rise to any materially new or materially different environmental effects in comparison with the authorised development as approved

then the application shall be taken to have been refused by the relevant planning authority at the end of that period.

Further information and consultation

2. (1) In relation to any application to which this Schedule applies, the relevant planning authority shall have the right to request such further information from the undertaker as is necessary to enable it to consider the application.

(2) In the event that the relevant planning authority considers such further information to be necessary and the provision governing or requiring the application does not specify that consultation with a requirement consultee is required the relevant planning authority shall, within fourteen (14) days of receipt of the application, notify the undertaker in writing specifying the further information required.

(3) If the provision governing or requiring the application specifies that consultation with a requirement consultee is required, the relevant planning authority shall issue the consultation to the requirement consultee within 2 business days of receipt of the application, and shall notify the undertaker in writing specifying any further information requested by the requirement consultee within 2 business days of receipt of such a request and in any event within 21 days of receipt of the application.

(4) In the event that the relevant planning authority does not give notification as specified in sub-paragraph (2) or (3) it shall be deemed to have sufficient information to consider the application and shall not thereafter be entitled to request further information without the prior agreement of the undertaker.

Fees

3. (1) Where an application is made to the relevant planning authority for written consent, agreement or approval in respect of a requirement, the fee contained in regulation 11D(1)(b) of the Town and Country

Planning (Fees for Applications and Deemed Applications) Regulations 1989 (as may be amended or replaced from time to time) shall apply and shall be paid to that authority for each application.

- (2) Any fee paid under this Schedule shall be refunded to the undertaker within eight (8) weeks of:
- (a) the application being rejected as invalidly made; or
 - (b) the relevant planning authority failing to determine the application within eight (8) weeks from the date on which it is received unless:
 - (i) within that period the undertaker agrees, in writing, that the fee shall be retained by the relevant planning authority and credited in respect of a future application; or
 - (ii) a longer period of time for determining the application has been agreed pursuant to sub-paragraph 1(1)(c) of this Schedule.

Appeals

4. (1) The undertaker may appeal in the event that:

- (a) the relevant planning authority refuses (including a deemed refusal pursuant to paragraph 1(3)) an application for any consent, agreement or approval required by a requirement included in this Order or grants it subject to conditions;
- (b) on receipt of a request for further information pursuant to paragraph 2 the undertaker considers that either the whole or part of the specified information requested by the relevant planning authority is not necessary for consideration of the application; or
- (c) on receipt of any further information requested, the relevant planning authority notifies the undertaker that the information provided is inadequate and requests additional information which the undertaker considers is not necessary for consideration of the application.

(2) The appeal process shall be as follows:

- (a) The undertaker shall submit the appeal documentation to the Secretary of State and shall on the same day provide copies of the appeal documentation to the relevant planning authority and the requirement consultee;
- (b) The Secretary of State shall appoint a person within ten (10) business days of receiving the appeal documentation and shall forthwith notify the appeal parties of the identity of the appointed person and the address to which all correspondence for his attention should be sent;
- (c) The relevant planning authority and the requirement consultee shall submit written representations to the appointed person in respect of the appeal within ten (10) business days of the start date and shall ensure that copies of their written representations are sent to each other and to the undertaker on the day on which they are submitted to the appointed person;
- (d) The appeal parties shall make any counter-submissions to the appointed person within ten (10) business days of receipt of written representations pursuant to sub-paragraph (c) above; and
- (e) The appointed person shall make his decision and notify it to the appeal parties, with reasons, as soon as reasonably practicable and in any event within fifteen (15) business days of the deadline for the receipt of counter-submissions pursuant to sub-paragraph (d).

The appointment of the person pursuant to paragraph sub-paragraph (b) may be undertaken by a person appointed by the Secretary of State for this purpose instead of by the Secretary of State.

(3) In the event that the appointed person considers that further information is necessary to enable him to consider the appeal he shall, within five (5) business days of his appointment, notify the appeal parties in writing specifying the further information required.

(4) Any further information required pursuant to sub-paragraph (3) shall be provided by the undertaker to the appointed person, the relevant planning authority and the requirement consultee on the date specified by the appointed person (the "specified date"), and the appointed person shall notify the appeal parties of the revised timetable for the appeal on or before that day. The revised timetable for the appeal shall require submission of written representations to the appointed person within ten (10)

business days of the specified date but shall otherwise be in accordance with the process and time limits set out in sub-paragraph (2)(c)-(e).

(5) On an appeal under this paragraph, the appointed person may-

- (a) allow or dismiss the appeal, or
- (b) reverse or vary any part of the decision of the relevant planning authority (whether the appeal relates to that part of it or not),

and may deal with the application as if it had been made to him in the first instance.

(6) The appointed person may proceed to a decision on an appeal taking into account only such written representations as have been sent within the relevant time limits.

(7) The appointed person may proceed to a decision even though no written representations have been made within the relevant time limits, if it appears to him that there is sufficient material to enable a decision to be made on the merits of the case.

(8) The decision of the appointed person on an appeal shall be final and binding on the parties, and a court may entertain proceedings for questioning the decision only if the proceedings are brought by a claim for judicial review.

(9) If an approval is given by the appointed person pursuant to this Schedule, it shall be deemed to be an approval for the purpose of Schedule 2 (Requirements) as if it had been given by the relevant planning authority. The relevant planning authority may confirm any determination given by the appointed person in identical form in writing but a failure to give such confirmation (or a failure to give it in identical form) shall not be taken to affect or invalidate the effect of the appointed person's determination.

(10) The appointed person may or may not be a member of the Planning Inspectorate but shall be a qualified town planner of at least ten (10) years' experience.

(11) Save where a direction is given pursuant to sub-paragraph 12 requiring the costs of the appointed person to be paid by the relevant planning authority, the reasonable costs of the appointed person shall be met by the undertaker.

(12) On application by the relevant planning authority or the undertaker, the appointed person may give directions as to the costs of the appeal parties and as to the parties by whom the costs of the appeal are to be paid. In considering whether to make any such direction and the terms on which it shall be made, the appointed person shall have regard to Communities and Local Government Circular 03/2009 or any circular or guidance which may from time to time replace it.

Interpretation of Schedule 15

5. In this Schedule 15:

"business day" means a day other than a Saturday or Sunday which is not Christmas Day, Good Friday or a bank holiday under section 1 of the Banking and Financial Dealings Act 1971;

"requirement consultee" means any body named in a requirement as a body to be consulted by the relevant planning authority in discharging that requirement.

EXPLANATORY NOTE

(This note is not part of the Order)

This Order authorises Norfolk County Council (referred to in this Order as the undertaker) to construct and operate a new predominantly dual carriageway road starting at Fakenham Road (A1067) and ending at the A47 Trunk Road and to carry out associated works. The Order would permit the undertaker to acquire, compulsorily or by agreement, land and rights in land and to use land for this purpose. The Order also makes provision in connection with the maintenance of the authorised development.

A copy of the Order plans and the book of reference mentioned in this Order and certified in accordance with article 42 (certification of plans etc.) may be inspected free of charge during working hours at [●].

INTRODUCTION

This document is submitted in relation to the application for a Development Consent Order by Norfolk County Council to the Secretary of State, under the Planning Act 2008.

The application is for the Norfolk County Council (Norwich Northern Distributor Road (A1067 to A47(T))) Order, to grant development consent for the construction of a new highway running west to east, to south, between the A1067 Fakenham Road and the A47 Trunk Road at Postwick, including improvements to the existing highway network, to the north and north east of Norwich.

This document is the Explanatory Memorandum, comprises part of the application documents and is provided as required under Regulation 5(2)(c) of the Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2009.

5	Glossary.....	28

1 Summary

- 1.1 This explanatory memorandum is prepared to explain the purpose and effect of each Article of, and the Schedules to, the draft Norfolk County Council (Norwich Northern Distributor Road (A1067 to A47(T))) Order ("the Order"), as required by Regulation 5(2)(c) of the Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2009 (SI 2264).
- 1.2 The Order is based on the model provisions (see paragraph 2 below for further information on these), but where necessary departs from them. Where there is a significant departure from the model provisions, an explanation of the departure is provided.

2 Introduction

- 2.1 This explanatory memorandum seeks to explain the purpose and effect of each Article of, and the Schedules to, the draft Norfolk County Council (Norwich Northern Distributor Road (A1067 to A47(T))) Order ("the Order"), as required by Regulation 5(2)(c) of the Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2009 (SI 2264). It also seeks to identify and explain departures from the Infrastructure Planning (Model Provisions) (England and Wales) Order 2009 ("the model provisions"). Whilst the power for the Secretary of State to designate, and the requirement to have regard to, model provisions have been removed by the Localism Act 2011, the applicant considers it is still relevant to note and explain variations made in the Order compared to the model provisions.

3 The Purpose of the Order

- 3.1 Norfolk County Council (NCC or the applicant) is making an application to the Secretary of State for a development consent order for the construction and operation of the Norwich Northern Distributor Road in the County of Norfolk ("the Scheme", or as referred to in the Order "the authorised development"). The Order refers to the person authorised to exercise the powers in the Order as "the undertaker", and defines the undertaker as Norfolk County Council.
- 3.2 The Secretary of State made a direction under section 35 Planning Act 2008 on 9 August 2013 that the Scheme is to be treated as development for which development consent is required under the Planning Act 2008 ("the Direction"). A copy of the Direction is at Appendix C to the Introduction to the Application (Document 1.1).
- 3.3 The applicant therefore requires development consent under the Planning Act 2008 in order to construct the Scheme. Development consent may only be granted by order, following an application to the Secretary of State (section 37 Planning Act 2008).
- 3.4 In addition to providing for the construction and operation of the authorised development, the Order will, in accordance with section 122 and section 120(3) / Schedule 5 of the Planning Act 2008, authorise the acquisition of land and rights over land, and the extinguishment of, or interference with, interests in or rights over land. The Book of Reference (Document 4.3) sets out what land is to be acquired and what other rights and interests will be affected. The Order and the Book of Reference should be read together with the Statement of Reasons (Document 4.1) which accompanies the Application and which sets out the justification for the acquisition or interference with the Order land. The plots of land listed in the Book of Reference are shown on the Land Plans (Document 2.2).
- 3.5 The matters for which development consent is sought are summarised briefly below – the formal description is provided in Schedule 1 to the draft DCO:
- 3.5.1 The main component of the Scheme is the Norwich Northern Distributor Road itself (known as "the NDR"). This is defined in the Order as the "NDR classified road", and Part 2 of Schedule 5 to the Order describes which parts of the Scheme will be formally part of the NDR classified road (which once operational will be classified as the A1270);

- 3.5.2 In addition, the authorised development also includes works which are proposed as well or which are required as a result of the NDR classified road, such as:
- a. new highways (other than the NDR classified road) and private accesses, and stopping up, diversion of and alterations to existing highways (including public rights of way) and accesses;
 - b. landscaping, habitats and other environmental or ecological mitigation measures;
 - c. drainage infrastructure;
 - d. demolition of two barns and construction of two bat barns;
 - e. closures of, alterations to and new private means of access;
 - f. various other works associated with the construction of the Scheme (as set out in Schedule 1 to the Order); and
 - g. various temporary works and sites required for the construction of the Scheme.
- 3.6 A description of the route of the NDR classified road is provided in paragraph 1 of the Introduction to the Application (Document 1.1) and a more detailed description of the various elements of the authorised development is provided in Chapter 2 of the Environmental Statement (Volume 1, Document 6.1).
- 3.7 The Order does not include any associated development pursuant to section 115(1)(b) of the Planning Act 2008, due to the terms of the Direction. The fifth paragraph of the Direction states "THE SECRETARY OF STATE DIRECTS that development, together with any matters associated with it, is to be treated as development for which development consent is required." The first reference to "development" is to the Norwich Northern Distributor Road, which therefore requires development consent. The Direction also specifies that "any matters associated with [the NDR]" are to be treated as development for which development consent is required.
- 3.8 Section 115(1) of the Planning Act 2008 provides that development consent may be granted for "(a) development for which development consent is required, or (b) associated development" (emphasis added). As the two limbs of section 115(1) are separated by "or", it is clear that any particular part of a project cannot be both development for which development consent is required (under section 115(1)(a)) and associated development (under section 115(1)(b)). As the Secretary of State has directed that the NDR "together with any matters associated with it" (emphasis added) is development for which

development consent is required, the whole Scheme is therefore within that category, and cannot be associated development.

4 The Provisions of the Order

- 4.1 The Order consists of 47 operative provisions, each referred to as Articles, and 16 Schedules. The Articles are considered below in numerical order, and Schedules are considered along with the corresponding Article.

Parts 1 (Preliminary) and 2 (Principal Powers)

- 4.2 Articles 1 and 2 are preliminary provisions. Article 1 provides for the way in which the Order should be cited and when it takes effect. Article 2 provides for the interpretation of the rest of the Order, including the Schedules. Article 2 makes alterations to the model provisions to accommodate the departures from the model provisions elsewhere in the Order, and to add required definitions, including:
- 4.2.1 As the Order relates to a highways development, various definitions have been added which are relevant to that type of development and which are used in the Order. These include "apparatus", "bridleway", "highway", "restricted byway" and "trunk road". Wherever possible terms are defined are by reference to existing legislation;
 - 4.2.2 Certain definitions have been added so that documents relating to the Application can be referred to, including "environmental impact assessment", "environmental statement", "the land plan(s)", "the landscaping plans", "the sections", "the street plans" and "the works plans";
 - 4.2.3 The Order provides a definition for "maintain" in order to provide clarity as to what the undertaker is permitted to do under the power of maintenance (see further below);
 - 4.2.4 The "limits of deviation" for the authorised development are defined so as to set out the extent to which the undertaker may deviate from the Scheme as shown on the works plans (Document 2.3) when it is constructing the Scheme;
 - 4.2.5 Two bodies – National Grid and Network Rail – are defined as their apparatus is crossed by the NDR and they are therefore referred to in the Order;
 - 4.2.6 The NDR is defined as "the NDR classified road"; and
 - 4.2.7 Norfolk County Council is defined as the "relevant planning authority", which is the body who will approve matters pursuant to the requirements

(in Schedule 2, see further below). Norfolk County Council acting in this role is standard for similar road schemes promoted under other legislation and has been agreed with the host local authorities.

- 4.3 Article 3 grants development consent for the authorised development. Schedule 1 describes the authorised development in detail, split into 'work numbers' each of which represents different sections or parts of the Scheme. This split of the Scheme between different work numbers enables the Order to refer to certain parts of the Scheme with clarity, by simply citing the relevant work number. The work numbers are delineated on the works plans (Document 2.3).
- 4.4 Article 3 also requires the works authorised by the Order to be constructed in the lines or situations shown on the works plans (Document 2.3), in accordance with the drawings specified in the requirements and only within the 'Order limits' (the boundary of the Scheme, as shown on the works plans). Article 3 also permits construction within limits of deviation which are specified in article 5 and are shown on the works plans. This approach, whilst going beyond the model provisions, reflects a standard approach used in orders made under the Transport and Works Act 1992 as well as a number of recent development consent orders for highways developments, and serves to precisely define the authorised development by reference to the plans. The Environmental Statement (Documents 6.1 – 6.3) has taken account of the limits of deviation.
- 4.5 Article 4 provides for the maintenance of the authorised development. Article 4(1) closely reflects the terms of the model provisions. Article 4(2) goes beyond the model provisions to reflect the particular maintenance needs of the authorised development itself. This includes the carrying out and maintenance of such works as may be necessary or expedient for the purposes of, or for purposes ancillary to, the construction of the authorised development including altering the position of apparatus. Article 4(2) is provided for the avoidance of doubt, and the list of matters falling within 'maintenance' is not exhaustive. Whilst this approach departs from the model provisions, it provides greater clarity and ensures the maintenance provisions meet the specific needs of the project. Article 4(3) is included to ensure that the power to carry out maintenance only arises within the Order limits.
- 4.6 Article 5 permits the construction of the authorised development to deviate laterally or vertically within limits set by reference to the parameters within the Article. The parameters in the tables in article 5(2) and 5(3) apply to the elements of the Scheme set out in the second column, within those work numbers listed in the first column. The table in article 5(2) applies to all the

work numbers in Schedule 1 (i.e. the whole Scheme), whereas the table in article 5(3) applies to the specified work numbers only. The undertaker requires the (lower) limits of deviation in article 5(2) generally across the Scheme, and has identified the need for certain areas of the Scheme to have slightly increased flexibility, which is provided for in article 5(3).

- 4.7 Article 6(1) overrides section 156(1) Planning Act 2008 (which is permitted by section 156(2)) and provides that the benefit of the Order is for the undertaker, rather than anyone with an interest in the land. It would be impracticable and inappropriate for a variety of landowners to implement parts of the Order, as might occur without this provision. The undertaker is defined in Article 2 as Norfolk County Council, as promoter of the Scheme.
- 4.8 Articles 6(2) and 7 provide for exceptions to Article 6(1). Article 6(2) provides that Article 6(1) does not apply to numbered works which are for the benefit of statutory undertakers. Article 7 makes detailed provision for the transfer of the benefit of the Order. The Article goes beyond the similar model provision in the interests of clarity.

Part 3 (Streets)

- 4.9 Article 8 allows the undertaker to alter the layout of and carry out works within certain streets, being both those identified in Parts 1 and 2 of Schedule 3 and those within the Order limits generally. Where works are carried out temporarily the street must be restored, and other than in situations where the undertaker is the street authority (i.e. where they are the same body, as at present), then the consent of the street authority is required before works can be carried out under Article 8(2). Article 8(5) provides for the consent of the street authority to be deemed to be given if it receives an application under article 8(4) and does not determine it within 28 days – this is provided to ensure that the undertaker is not held up in its implementation of the Scheme, although as noted above in relation to article 8(2), this would not apply whilst Norfolk County Council is the undertaker (as at present, and as proposed).
- 4.10 Article 9 allows the undertaker to carry out street works in accordance with the statutory rights under the New Roads and Street Works Act 1991. It is based on the model provision intended to permit the laying of utilities in streets for the purposes of the authorised project. Articles 9(3) and 9(4) have been added to the model provision – respectively they ensure that any streets which are temporarily altered are restored and require the consent of the street authority before the powers in Article 9(1) are exercised.

- 4.11 Article 10 provides for the maintenance of all streets to be constructed or altered as part of the authorised development. Those which are to be public highway (including the NDR itself) will be maintained by the highway authority. Those which are not intended to be highway (such as private accesses which the undertaker is altering or creating) will be maintained by the undertaker for 12 months from completion, and then by the street authority. Article 10(3) incorporates a defence from the Highways Act 1980 where the undertaker is subject to an action for damages and has taken such care as was reasonably required in the circumstances to secure that the street was not dangerous to traffic.
- 4.12 Article 10(4) is not a model provision – it provides for the undertaker to be responsible for maintaining three specific structures which will cross the NDR, and which will not be highways. This liability is placed on the undertaker for clarity for those that will rely on these structures to pass over the NDR for access.
- 4.13 Article 11 provides for the classification of roads that are to be constructed or altered as part of the authorised development. This is not a model provision but is integral to the implementation and use of the Scheme. The highway specified in Part 1 of Schedule 5 (at the Postwick end of the NDR at the A47(T)) will become trunk roads, with the Secretary of State as highway authority, through Article 11(1). The NDR classified road will become a principal road (the A1270) (Article 11(2) and Part 2 of Schedule 5). In addition, Article 11(3), 11(4), 11(5) and 11(6) provide either for the classification or where necessary for the de-classification and then re-classification of certain other highways affected by the Scheme. De-classification of existing highways must occur first, since a highway cannot have two classifications simultaneously.
- 4.14 Article 12 permits the stopping up of the streets and private accesses which are identified in Schedule 6. It is based on the model provision, with the addition of private accesses utilising the same power. In general the streets or accesses are required to be stopped up as their continued existence would be inconsistent with the Scheme. Where substitutes are to be provided (Parts 1 and 2 of Schedule 6), the existing street or access cannot be stopped up until either the permanent replacement or a temporary alternative has been provided (article 12(2)).
- 4.15 Paragraphs 12(3) and (4) permits the stopping up of the private accesses listed in Part 3 of Schedule 6 in certain circumstances, designed to ensure that third

parties who own land either side of the relevant street are not adversely affected.

- 4.16 Article 12(6) provides that anyone suffering loss due to the operation of Article 12 is entitled to compensation, and the whole Article is subject to the operation of Article 33 which therefore provides protection in respect of statutory undertakers' equipment which may be within roads or accesses being stopped up.
- 4.17 The principle of Article 13 is based on the model provision although the wording used has been heavily adapted. Article 13(1) provides for the three rights of way listed in paragraph (a) of each of Parts 1, 2 and 3 of Schedule 7 to be stopped up. Article 13(2) requires the provision of the alternative rights of way as set out in paragraph (b) of each of Parts 1, 2 and 3 of Schedule 7. The timing of the stopping up and re-provision in Article 13 is amended from the model provision. The rights of way are (legally) stopped up from the date of their being physically stopped up by the undertaker. In addition, the new rights of way cannot be provided from the date of the closure of the existing rights of way (i.e. around the start of construction), as the new rights of way are part of the Scheme. They are therefore to become public rights of way (restricted byways in all three cases) once they are constructed and open to the public.
- 4.18 Article 14 is a model provision which provides for the temporary stopping up of streets for the purposes of carrying out the authorised project. As per the model provision it applies generally, and also applies specifically to certain streets – those are set out in Schedule 8 to the Order. Paragraph (2) confers a power on the undertaker where the use of a street has been temporarily stopped up under the article 14 power to use it as a temporary working site. Any person suffering loss due to the stopping up of a private right of way under article 14 is entitled to compensation (article 14(6)). As for article 8, the provisions relating to consulting with and consent from the street authority (including deemed consent under article 14(7)) are not relevant whilst Norfolk County Council is the undertaker, but they are retained to provide for the possible future situation (although not anticipated) that that position changes.
- 4.19 Article 15 is an adaptation of a model provision which permits the undertaker to form new or to improve existing means of access in the locations specified in Schedule 9. Such means of access or works can also occur in other locations reasonably required for the authorised development with the approval of the relevant planning authority in consultation with the highway authority. The model provision relates this article to the authorised development generally,

whereas this article 15 relates only to construction of the Scheme – that is because accesses to the NDR (once built) are effectively part of the Scheme itself (i.e. the new side roads etc which will be adopted highway). Therefore Article 15 just provides for construction stage accesses – this is in any case largely 'confirmatory' as the Order land construction area can (and will) be accessed using the various public highways which intersect it, which would therefore be available even without Article 15.

- 4.20 Article 16 is a model provision which authorises street authorities and the undertaker to enter into agreements relating to the construction of a street or the carrying out of works in the street and the stopping up, alteration and diversion of the street. As above, this article is retained for the scenario in which the undertaker is no longer Norfolk County Council – whilst it is, this Article will not be needed.

Part 4 (Supplemental Powers)

- 4.21 Article 17 is a model provision which enables the undertaker to discharge water into any watercourse, public sewer or drain in connection with the construction and maintenance of the authorised development with the approval of the owner of the watercourse, public sewer or drain (such approval not to be unreasonably withheld) and subject to certain other conditions.
- 4.22 Article 18 is a model provision which allows the undertaker to carry out protective works to buildings within the Order limits, subject to a number of conditions including the service of 14 days' notice (except in the case of emergency) and the payment of compensation.
- 4.23 Article 19 is a model provision which allows the undertaker to survey and/or investigate land including bringing equipment onto the land and making trial holes. The power is subject to a number of conditions including a requirement for 14 days' notice to be given, and is subject to the payment of compensation.

Part 5 (Compulsory acquisition of land)

- 4.24 Article 20 provides for the compulsory acquisition of land as shown on the land plans and described in the book of reference so far as it is required for the authorised development (or to facilitate the authorised development or if incidental to the authorised development). Land can also be acquired

compulsorily if required as replacement land for special category land (see Article 32 below).

- 4.25 Article 20 makes consequential provision for the extinguishment of rights in the land in order to ensure that such rights cannot impact on implementation or use of the authorised development, and provides for the payment of compensation. Article 20 is also subject to two articles which provide for a lesser interference with land (Article 22, compulsory acquisition of rights and Article 28, temporary use of land for carrying out the authorised development). Those articles are explained below. Article 20 follows the model provision.
- 4.26 Article 21 follows the model provision and incorporates the minerals code into the Order. Article 21 has been included within the Order as mineral rights have been identified within the Order land, and the mineral code provides a statutory process for dealing with the purchase of and compensation for minerals within compulsory acquisition under the Order.
- 4.27 Article 22 is a power to override easements and other rights and reflects the terms of section 120(3) and (4), and paragraphs 2 and 3 of Part 1 of Schedule 5 Planning Act 2008. This Article is not a model provision but has a precedent in the Rookery South (Resource Recovery Facility) Order 2011. While the model provisions state that land vested in the undertaker would be discharged from all rights, trusts and incidents to which it was previously subject at the point of vesting it is not clear whether this covers the benefit of restrictive covenants and instances where land subject to third party rights is acquired by agreement rather than through compulsory acquisition. It also provides for the situation where access to the land for the purposes of the Scheme occurs before vesting.
- 4.28 Provision is made for the payment of compensation for any interests which are overridden by Article 22.
- 4.29 Article 23 is a model provision which imposes a time limit of 5 years for the exercise of powers of compulsory acquisition.
- 4.30 Article 24 is based on but departs from a model provision which entitles the undertaker to acquire rights over land which may be compulsorily acquired, including rights already in existence or by creating new ones. The revised Article 24(1) provides for such rights as may be required to be acquired by the undertaker over land which it is authorised to acquire under Article 20, instead of referring to specific rights to be acquired.

- 4.31 The public benefit of this is that it would allow the undertaker, if possible, to reduce the area of outright acquisition and rely on rights instead. A provision of this kind is usual in Transport and Works Act orders and Hybrid Bills, and without it this flexibility would not be possible. This is subject to new paragraph (2), which provides that for the land described in Schedule 10, the undertaker's powers of compulsory acquisition are limited to the acquisition of such rights, and the imposition of such restrictive covenants, as may be required for the purposes set out in that Schedule. Outright acquisition is not required for the Schedule 10 land, and a provision such as this was included in the Network Rail (Nuneaton North Chord) Order 2010 and the M1 Junction 10a (Grade Separation) Order 2013.
- 4.32 Article 24(5) and Schedule 11 impose modifications to the compulsory purchase and compensation provisions under general legislation. They do not affect the entitlement to compensation, but generally ensure that the compensation procedure applies to the additional categories of acquisition covered by the Order – the creation of new rights and the imposition of restrictive covenants in particular. This is a consequence of the extension of land acquisition powers to these categories (done to allow lesser land interests to be acquired), and is commonplace in Transport and Works Act orders. For the purpose of section 126(2) of the Planning Act 2008, the relevant compensation provisions are modified only to the extent necessary to ensure that they apply properly to the acquisition of rights, and not to affect the amount of compensation to which landowners would be entitled.
- 4.33 Article 25 is based on a model provision and has the effect of extinguishing private rights over land compulsorily acquired – it departs from the model provision in that it relates to all rights over land, not just rights of way, to ensure that any other rights that may exist cannot prevent the implementation or use of the Scheme. It provides for the extinguishment of private rights over Order land already owned by the undertaker, when any activity authorised by the Order interferes with or breaches those rights. It follows the approach in the Rookery South (Resource Recovery Facility) Order 2012 and the M1 Junction 10a (Grade Separation) Order 2013.
- 4.34 Article 26 applies the vesting procedures in the Compulsory Purchase (Vesting Declarations) Act 1981 to the exercise of powers of compulsory acquisition pursuant to the Order and is a model provision.

- 4.35 Article 27 permits the undertaker to acquire only the subsoil of land which is to be compulsorily acquired, and gives the undertaker the ability to minimise the extent of interests acquired from owners. This is a model provision.
- 4.36 Article 28 relates to situations where the undertaker is seeking to acquire part, rather than the whole, of properties compulsorily under the Order. It provides for a procedure whereby the owner whose land is being acquired in part may, subject to conditions, require the whole of his property to be taken. Express provision is made for the resolution of disputes in the Upper Tribunal (Lands Chamber). This is a model provision.
- 4.37 Article 29 is a model provision which allows the undertaker to enter on and appropriate interests within streets where required for the purposes of the authorised development without being required to acquire that land. Provision is made for the payment of compensation in certain circumstances.
- 4.38 Article 30 allows the land specified in Schedule 12 to be temporarily used for the carrying out of the authorised development. Article 30 is clarified by the addition of paragraph (11) (not a model provision) which confirms that the undertaker may take land temporarily more than once.
- 4.39 Article 31 is similar to article 30 but permits the temporary use of land for maintenance of the authorised project.
- 4.40 Both Articles 30 and 31 are model provisions and provide for the payment of compensation for that temporary use of the land.
- 4.41 Article 32 makes provision for the two types of 'special category land' applicable to the authorised development – open space and fuel allotment land. The open space (at Marriott's Way) is to be replaced as part of the Scheme by permanent provision in a similar location on a new bridge deck over the NDR. During construction of the Scheme a route between the two closure points on Marriott's Way is to be re-provided (subject to exceptions), but in a location to the side of the current area so that the bridge can be built. The provision of that route is secured by requirement 24 in Schedule 2 to the Order, and the closure of Marriott's Way open space is tied into that requirement in Article 32. The article departs from the model provision in relation to Marriott's Way open space in order to allow for the gap in time between the necessary closure of the existing open space and the opening of the new open space.
- 4.42 The fuel allotment land is also being replaced by land close to the land being compulsorily acquired. The replacement land is provided in two parts – the first

part is to be provided prior to the existing fuel allotment land being taken by the undertaker for use within the Scheme. The second part is required as a temporary construction compound for the Scheme and will then be provided as fuel allotment land at the end of the construction period. Further detail on the special category land is provided in Section 10 of the Statement of Reasons (Document 4.1).

- 4.43 Article 33 provides for the acquisition of land of statutory undertakers which is identified in the Book of Reference (Document 4.3). This article includes a power to move the apparatus of those statutory undertakers and to extinguish rights. It is a model provision, except it is made subject to the protective provisions in Schedule 13, which are to apply to certain statutory undertakers as set out in that Schedule.
- 4.44 Article 34 makes provision in respect of the apparatus and rights of statutory undertakers in streets which are stopped up, including provision as to the relocation of apparatus. It is a model provision.
- 4.45 Article 35 provides that persons who have to create a new connection following the removal of apparatus from stopped up streets may recover the costs of new connections from the undertaker. It is a model provision.

Part 6 (Operations)

- 4.46 Article 36 provides that the undertaker may fell or lop or cut back the roots of any tree or shrub to prevent it obstructing or interfering with the construction, maintenance or operation of the authorised development. Compensation is provided for if loss or damage is caused.
- 4.47 Article 37 is in similar terms to the previous Article, but applies to trees subject to tree preservation orders, which are listed in Schedule 16. The permission granted by the article constitutes deemed consent under a tree preservation order. The article follows the model provision. At present Schedule 16 does not contain any entries, as there are not currently any tree preservation orders which are affected by the Scheme. However, Norfolk County Council understands that the District local planning authorities for the Scheme area may implement tree preservation orders in certain places in due course - whilst it is expected from discussions that these will be in locations which can be protected by the undertaker and will not be affected by the Scheme, it has chosen to include the power in the draft DCO at this stage in case that is not

the case. The position will be reviewed during the examination of the Application.

Part 7 (Miscellaneous and General)

- 4.48 Article 38 is a model provision which would override landlord and tenant law so far as it would prejudice the operation of any agreement for leasing the whole of the authorised development or the right to operate the same or any agreement entered into by the undertaker for the construction, maintenance, use or operation of the authorised development.
- 4.49 Article 39 is a model provision which has the effect of ensuring that the land on which the authorised development is constructed is not excluded from being “operational land” under the Town and Country Planning Act 1990 by the effect of s 263 of that Act.
- 4.50 Article 40 provides that no one shall be able to bring statutory nuisance proceedings under the Environmental Protection Act 1990 in respect of noise, if the noise is created in the course of carrying out or maintenance of the authorised development and for which notice has been given under section 60 or consent obtained under section 61 or 65 of the Control of Pollution Act 1974 or which is an unavoidable consequence of the authorised development.
- 4.51 Article 41 provides for Schedule 13 – which protects the interests of certain statutory undertakers (as referred to in Article 33 above) – to have effect. Schedule 13 is currently blank – Norfolk County Council is continuing discussions with statutory undertakers affected by the Scheme and anticipates being able to provide agreed protective provisions for Schedule 13 in due course.
- 4.52 Article 42 is a model provision which provides for certification of the approved plans, etc, to which the Order relates.
- 4.53 Article 43 deals with the service of notices pursuant to the Order. These provisions are based on those appearing in the Transport and Works (Model Provisions for Railways and Tramways) Order 2006.
- 4.54 Article 44 provides the undertaker with powers to make traffic regulation orders in relation to roads for which it is not the highway authority. The undertaker can only do so within 12 months of the opening of the Scheme highways for public use, must consult with the police and traffic authority, and can only implement

measures with the latter's approval. As the undertaker is Norfolk County Council (the local highway authority), this Article presently applies in relation to the A47(T) only.

- 4.55 Article 45 provides for applicable traffic regulation measures and speed limits for the parts of the authorised development identified in Schedule 14. In addition, Schedule 14 also provides certain traffic regulation measures which are to come into effect as part of the Scheme, and for specified existing orders to be amended or revoked in the manner set out.
- 4.56 Article 46 provides a procedure in relation to consents and approvals required pursuant to the Order. It applies to all such consents etc, bar those under requirements in Schedule 2, where a separate more detailed procedure is provided for in Schedule 15.
- 4.57 Article 47 is a general arbitration provision which provides that differences under the Order should be settled by arbitration unless another means of resolving a dispute is provided for in the Order. It is a model provision.

Requirements

- 4.58 Schedule 2 sets out the requirements which are a method through which the implementation and operation of the Scheme is controlled. Norfolk County Council has consulted with other local authorities relevant to the Scheme on these requirements, and those authorities have confirmed that they are content for Norfolk County Council to be the 'relevant planning authority' (see the definition in Article 1) to whom applications under requirements are made, subject to the local authorities being consulted. Such consultation is provided for in appropriate requirements, and is included within the process set out in Schedule 15 (see further below).
- 4.59 The requirements are as follows:
- 4.59.1 Paragraph 1 contains certain definitions and preliminary matters which relate to the requirements. The definition of "the advance works" describes certain elements of the works – this definition is then used in certain requirements to allow NCC to carry out those works prior to discharging or complying with those requirements. This will allow NCC to make an 'early start' on the authorised development, where appropriate, whilst discharging the relevant requirements at the same time.

- 4.59.2 The definition of "relevant district authorities" is used to define those Councils which Norfolk County Council (as local planning authority) must consult in considering whether to approve something submitted pursuant to a requirement.
- 4.59.3 A number of the requirements include wording which allows NCC to discharge them in relation to parts of the authorised development (using the work numbers in Schedule 1 to the Order). Whilst NCC intends to discharge each requirement in one submission (i.e. not phased), this wording gives NCC flexibility in terms of how the authorised development comes forward in appropriate circumstances. It does this through allowing NCC to discharge a requirement in respect of a particular work number (or numbers) and start work on that part of the Scheme, if that was what the construction timetable required. The requirement must then be separately discharged in relation to the remainder of the Scheme before works can commence on those latter parts of it.
- 4.59.4 Requirement 2 requires the authorised development to commence within 5 years of the date the Order comes into force, and requirement 3 requires NCC to give notice of the commencement of the authorised development to the relevant planning authority.
- 4.59.5 Requirement 4 ties the implementation and construction of the authorised development to the approved plans.
- 4.59.6 Requirement 5 requires the approval and implementation of the detailed landscape proposals that will form part of the Scheme, as well as the replacement of trees and shrubs that require replacement following planting.
- 4.59.7 Requirement 6 requires any trees and shrubs that are to be retained within the Order land to be protected during construction, and to be replaced if any are removed or damaged. It also requires areas of soil to be kept free of noxious weeds during construction.
- 4.59.8 Requirement 7 requires the approval and implementation of the detailed ecological mitigation measures that form part of the Scheme.
- 4.59.9 Requirement 8 requires the approval and implementation of measures to ensure that any contamination found during construction is appropriately dealt with, and also includes a provision setting out a

process for dealing with any unexpected contamination that may be found during construction.

- 4.59.10 Requirement 9 requires the approval and implementation of measures to mitigate the noise impacts of the construction of the Scheme.
- 4.59.11 Requirement 10 requires the approval and implementation of a travel plan for the construction stage of the Scheme, and requirement 11 requires the details of the construction stage access points to be approved and then implemented. Construction traffic must then use the approved accesses.
- 4.59.12 Requirement 12 limits the hours during which NCC may carry out works to construct the Scheme (including deliveries) to 7am to 7pm Mondays to Fridays and 7am to 1pm Saturdays and public holidays. No works are permitted outside the days and hours.
- 4.59.13 Requirement 13 requires the approval and implementation of measures to ensure that vehicles' wheels are cleaned prior to them leaving the construction site, to limit the deposition of mud and dust on the public highway.
- 4.59.14 Requirement 14 requires the approval and implementation of measures to control dust or other material from being blown off the construction site, as well as requiring all vehicles carrying relevant materials to be sheeted for the same reason.
- 4.59.15 Requirement 15 requires the approval and implementation of pollution control measures to ensure that watercourses and drainage in the area of the works are protected from potential pollution sources arising from the works.
- 4.59.16 Requirement 16 requires the approval and implementation of a written scheme of archaeological investigation in relation to the route of the authorised development, as well as setting out a process to control what must happen in the event that 'unexpected' archaeological finds are made as construction progresses.
- 4.59.17 Requirement 17 requires the approval and implementation of a site waste management plan for the construction stage of the Scheme.

- 4.59.18 Requirement 18 requires the approval and implementation of a plan to control emissions during the construction stage of the Scheme.
- 4.59.19 Requirement 19 requires the approval and implementation of a construction environmental management plan (CEMP) for the construction stage of the Scheme.
- 4.59.20 Requirement 20 requires that relevant parts of the works (that relating to Trunk Roads) are constructed in accordance with the Design Manual for Roads and Bridges (DMRB), a document published by the Department for Transport.
- 4.59.21 Requirement 21 requires the approval and implementation of both temporary and permanent fencing or other means of enclosure (so far as proposed). The temporary fencing must remain in place for the construction stage and then must be removed, whilst the permanent fencing must be in place prior to the authorised development opening for public use.
- 4.59.22 Requirement 22 requires the approval and implementation of permanent noise attenuation measures required to be in place during the operation of the authorised development (i.e. once in use).
- 4.59.23 Requirement 23 requires the approval and implementation of all public rights of way closures or diversions proposed as part of the Scheme.
- 4.59.24 Requirement 24 relates to Marriott's Way and to the provisions of Article 32 (see above). Marriott's Way is considered likely to be open space, and is to be replaced with other open space on an overbridge over the route of the NDR – this will be open to the public once constructed. The requirement secures the approval and implementation of an alternative route so that users of Marriott's Way can safely and conveniently cross the construction site whilst the overbridge is being constructed. The requirement provides limited exceptions to the obligation to keep the alternative route open, and requires the undertaker to give public notice where closures are planned.
- 4.59.25 Requirement 25 requires the approval and implementation of a surface water management strategy relating to the Scheme.

- 4.59.26 Requirement 26 confirms that where undertaker has obtained approval of a matter pursuant to a requirement, it can also obtain a 'further' approval from the relevant planning authority which will supersede the earlier one. Any such further submission would be subject to the same process under Schedule 15.
- 4.60 Schedule 15 sets out a process for the discharge of the requirements in Schedule 2 as no process is provided by the Planning Act 2008 or secondary legislation (unlike the Town and Country Planning Act 1990 regime). The undertaker considers it is logical that a formal process is set out for clarity. Processes similar to this have precedents in many of the development consent orders made so far under the Planning Act 2008. Norfolk County Council has consulted with the relevant planning authority and relevant district authorities prior to submitting Schedule 15 as part of the Order, and they have confirmed they are content with its form.
- 4.61 Paragraph 1(1) requires the relevant planning authority to determine applications pursuant to requirements within 8 weeks. That period runs from the date the application is received, unless the relevant planning authority requests further information (see below) or unless the undertaker and relevant planning authority agree a longer period.
- 4.62 If the relevant planning authority does not determine an application within 8 weeks (or relevant extended period) then it is deemed to be granted (paragraph 1(2)), except in cases where there are potentially different environmental effects from those assessed in the Environmental Statement (Documents 6.1 to 6.3) in which case deemed approval is not appropriate and deemed refusal is provided for instead (paragraph 1(3)).
- 4.63 Paragraph 2 provides for the consultation and information part of the process. When it receives an application the relevant planning authority has 14 days in which to request further information from the undertaker in relation to requirements for which there are no consultees. Where there are consultees the relevant planning authority must send the application to the consultees within 2 days of receipt and then has 21 days to notify the undertaker of any further information required.
- 4.64 Paragraph 3 requires the undertaker to pay a fee to the relevant planning authority in relation to applications pursuant to requirement. The fees are determined by reference to the amount payable under the Town and Country

Planning Act 1990 regime in relation to discharge of conditions given the close analogy between these situations.

4.65 Paragraph 4 sets out the ability for the undertaker to appeal – it may do so if the relevant planning authority refuses an application or requests further information which the undertaker does not consider is necessary to determine the application. Paragraph 4(2) sets out the process that any appeal will follow, including that the Secretary of State has conduct of any appeal, a concept taken from the Town and Country Planning Act 1990 regime.

5 Glossary

Term	Meaning/Definition
the Application	The Application for the DCO for the Scheme
DCO	Development consent order, the type of consent that can be granted by the Secretary of State pursuant to the Planning Act 2008 and for which NCC has applied pursuant to the Application
the Order	The Norfolk County Council (Norwich Northern Distributor Road (A47 to A1067(T))) Order', being a draft development consent order and which is required for the Scheme
NCC	Norfolk County Council
NDR	Norwich Northern Distributor Road, part of the development for which consent is sought in the Order, and described in the Order as the "NDR classified road"
the Scheme	The development for which NCC is seeking consent within the Order, and described in the Order as the "authorised development"

The Norfolk County Council (Norwich Northern Distributor Road (A1067 to A47(T))) Order

1.0 Summary

1.1.1 This Statement of Reasons ('Statement') relates to an application made by Norfolk County Council ('NCC') to the Secretary of State for Transport under the Planning Act 2008 ('PA 2008'). The application is for the Norfolk County Council (Norwich Northern Distributor Road (A1067 to A47(T))) Order ('the DCO'). The Statement explains why it is necessary, proportionate and justifiable for the DCO to contain compulsory acquisition powers, and why there is a compelling case in the public interest for NCC to be granted these powers. The matters addressed in this Statement are summarised in this section. References to numbered sections or paragraphs are to sections or paragraphs of this Statement.

1.2 Scheme Details (Section 3.0)

1.2.1 The Northern Distributor Road (NDR) is a dual carriageway all-purpose strategic distributor road of approximately 20.4km linking the A1067 Fakenham Road to the A47(T) at Postwick.

1.2.2 In August 2013, the Secretary of State for Transport directed, under section 35 of the PA 2008, that the NDR Scheme is a project of national significance and is to be treated as development for which development consent is required on the basis that it:

- provides a direct connection to/from an international airport to the Trans European Network and the Strategic Road Network;
- supports national growth potential by directly supporting over 135ha of proposed employment growth; and
- improves connection to/from the Great Yarmouth Enterprise Zone which supports the offshore energy industry and supply chain.

1.3 The Need for the Scheme and Alternatives considered (Section 4.0)

1.3.1 One of the key issues affecting the City of Norwich and its surroundings relates to the transport network. Problems include congestion, high volumes of traffic using inappropriate routes and poor access to the strategic road network, Norwich International Airport and north and north-east Norfolk. These problems have adverse implications for businesses and services, for the growth and development of Norwich, for the effective operation of public transport, walking and cycling and for the environment and quality of life.

1.3.2 The overall strategy set out in the Norwich Area Transportation Strategy (NATS) is that a package of transport measures is required, including an NDR.

1.3.3 The NDR will:

- reduce traffic flows on the northern sections of the Outer Ring Road, on key northern radial routes and on unsuitable residential and rural roads;
- reduce City Centre through traffic;
- reduce congestion;
- significantly improve access for north Norwich and north and north east Norfolk to the strategic road network and to Norwich International Airport;
- provide the transport infrastructure needed to allow planned and proposed growth to come forward; and
- increase the opportunities for improving public transport and the provision for pedestrians and cyclists.

Consideration of other approaches leading to the development of the proposals

1.3.4 Following an initial assessment of possible transport interventions, the following six strategies were assessed:

- Option 1 – A ‘full length’ NDR linking the A47(T) on both east and west sides of the city and complementary measures;
- Option 2 – A ‘half length’ NDR between the A47(T) at Postwick and the A140 Cromer Road and complementary measures;
- Option 3 – A ‘three quarter length’ NDR from the A47(T) at Postwick to the A1067 Fakenham Road and complementary measures;
- Option 4 – A new orbital bus service around Norwich; major improvements to existing radial bus services; improvements to junctions on Inner and Outer Ring Roads, and a ‘Ring and Loop’ system to prevent car drivers making through trips within the Inner Ring Road.

- Option 5 – A Light Rapid Transit service; improvements to junctions on the Inner and Outer Ring Roads; road user charging or workplace parking charging within the Inner Ring Road; a Ring and Loop system plus additional physical restrictions on car access to the City Centre.
- Option 6 – Planning new development so as to reduce the distance between home, work and services; financial incentives to implement workplace travel plans; improvements to walking and cycling networks and the promotion of alternative modes of transport and fuels.

1.3.5 The assessment concluded that a northern distributor road was required in order to address the transport problems. The full NDR was considered to give rise to impacts that could not be mitigated however a ‘three-quarter length’ NDR would still achieve the objectives set by the NATS review. Public transport options would not have sufficient impact across the NATS area to be considered as strategic alternatives in their own right or in combination, but they could play an important role in complementing the NDR options.

1.3.6 Before deciding on the application proposals, the conclusions of previous analyses were reviewed.

Measures to enhance the existing highway network as an alternative to the NDR

1.3.7 Measures to enhance the existing network would only partially meet the traffic need at the expense of widespread impact on urban and residential environments. Traffic would continue to be drawn into the urban area and many cross-city journeys would not be facilitated or would be less well served, resulting in continued urban and rural rat-running. It would also be less effective in supporting urban expansion to the north east of the City and less effective in stimulating and serving economic growth generally.

Improvement to public transport provision as an alternative to the NDR

1.3.8 Public transport initiatives are an essential complement to the NDR but, even in combination, they do not constitute an alternative to it. By relieving the radial routes of traffic, the NDR would help to facilitate improvements in bus services. Freeing the internal road networks of new developments from the need to cater for extraneous through traffic would result in better residential environments, which would be more easily penetrated by local bus services, pedestrians and cyclists.

Alternatives to the application proposals

- 1.3.9 The alignment and form of the NDR are the result of iterative design, informed by the output of land-use/transportation modelling and the preliminary conclusions of the studies carried out for the environmental impact assessment.
- 1.3.10 To confirm that the preferred option (the subject of the Application) is the one that best meets the need, the application proposals have been compared with the following:
- Alternative 1 - Single carriageway on the same route as the preferred Scheme.
 - Alternative 2 - Dual carriageway from the A47(T) at Postwick on a route the same as that of the preferred Scheme but terminating at the A140.
 - Alternative 3 – As Alternative 2 but with the addition of a single carriageway from the A140 to the A1067.
 - Alternative 4 – The preferred Scheme except for a single carriageway stretch between Fir Covert Road and the A1067.
 - Alternative 5 – Developer-funded link roads between the north east radials (in the segment between the A47(T) at Postwick and the A140) in conjunction with the development of planned growth areas.
- 1.3.11 Alternative 1's fulfilment of the scheme objectives is limited by the traffic capacity and attractiveness of its single carriageway to traffic. It has therefore been assessed as not performing as well as the Scheme and has not been pursued.
- 1.3.12 Alternative 2 fails to address problems west of the A140, and this limits its fulfilment of Scheme objectives. It has therefore been assessed as not performing as well as the Scheme and has not been pursued.
- 1.3.13 Alternative 3's fulfilment of the Scheme objectives is limited by the capacity and attractiveness of its single carriageway west of the A140. It has therefore been assessed as not performing as well as the Scheme and has not been pursued.
- 1.3.14 Alternative 4 would not provide a consistent standard for the NDR, it would not provide continuity of road type with the A47(T) Norwich Southern Bypass for

the entire length of the NDR and would provide an inferior performance in terms of link accidents and user costs. Feedback from consultation indicated that among those that responded there was a majority support for the dual carriageway between Fir Covert Road and the A1067. Alternative 4 has therefore been assessed as not performing as well as the Scheme and has not been pursued.

1.3.15 Alternative 5's fulfilment of Scheme objectives is very limited as it would serve as a direct access to development, would cater for large traffic flows, and also would make no provision west of the A140. It has therefore been assessed as not performing as well as the Scheme and has not been pursued.

1.4 Scope of Acquisition (Section 5.0)

1.4.1 Regulation 5(2)(h) of the Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2009 (the 'APFP Regulations') requires a statement of reasons for seeking a Development Consent Order ('DCO') which authorises "*the compulsory acquisition of land or an interest in land or right over land*". In addition to authorising the compulsory acquisition of land or interests or rights over land (Part 5, Powers of Acquisition, in the DCO), the DCO contains further powers, including:

- Article 8 – Power to alter layout, etc., of streets and Article 9 – Street works.
- Article 12 – Stopping up of streets and private access and Article 14 – Temporary prohibition or restriction of use of streets.
- Article 18 – Protective works to buildings.
- Article 19 – Authority to survey and investigate land.
- Article 29 – Rights under or over streets
- Article 30 – Temporary use of land for carrying out the authorised development and Article 31 – Temporary use of land for maintaining authorised development.
- Article 33 – Statutory undertakers, Article 34 – Apparatus and rights of statutory undertakers in land acquired or used and Article 35 – Recovery of costs of new connections.

1.4.2 For the purposes of this Statement, the expression 'compulsory acquisition powers' includes these additional powers.

1.5 Description of Land subject to Compulsory Acquisition (Section 6.0)

1.5.1 The majority of the land required is currently in agricultural use. Other land required includes land which is already part of the highway network, land

within Norwich International Airport, part of the grounds of the Norwich Aviation Museum, Marriott's Way recreational path, woodland, paddocks, bridleways, private access tracks, a water course, parts of the grounds of individual properties, an industrial storage area, a sewage pumping station, part of the railway line, the forecourt of business premises and derelict farm buildings.

1.6 Purpose in seeking Acquisition Powers (Section 7.0)

- 1.6.1 In broad terms, the purpose of the acquisition powers being sought is to enable NCC to construct and operate the NDR within the Order limits. The specific purposes for which each parcel of land is required are set out in Appendix 1.
- 1.6.2 An explanation of the additional acquisition powers described in paragraph 1.4.1 of this summary is included in Section 7.0 of this Statement.

1.7 The Justification for seeking Powers of Compulsory Acquisition (Section 8.0)

- 1.7.1 Section 4.0 of this document and Chapter 3 of the Environmental Statement explain the need for the NDR. NCC believes there is a compelling case in the public interest which justifies the proposed compulsory acquisition of land and rights necessary to facilitate its delivery.
- 1.7.2 NCC will continue to liaise, discuss and negotiate with landowners to ensure that where the opportunity arises, it can purchase interests by agreement.
- 1.7.3 NCC has sought to mitigate the direct impacts of the acquisition of land interests through discussions with the affected landowners. Interference with private rights being sought is considered to be necessary, proportionate and legitimate.
- 1.7.4 The NDR will be jointly funded by the Department for Transport (DfT) and NCC.

1.8 National Policy: The view of the Government (Section 9.0)

- 1.8.1 The National Infrastructure Plan 2011 ('the NIP 2011') set out a strategy for meeting the infrastructure needs of the UK economy, recognising that infrastructure networks form the backbone of a modern economy and are a major determinant of growth and productivity. It identified 40 key areas of infrastructure investment. Local authority major transport schemes development pool projects are referred to in the NIP 2011 as 'priority infrastructure investment'. When the NIP was published in November 2011 the NDR was included as one of a number of 'development pool projects' but

its status as a funded project was announced by DfT in December 2011. In the National Infrastructure Plan 2013 ('the NIP 2013') (published on 4 December 2013) the NDR is identified as a 'key project' and one of the Government's Top 40 priority infrastructure investments.

- 1.8.2 Section 104 of the Planning Act 2008 highlights the importance of National Policy Statements (NPS) in the determination of applications for development consent. The consultation draft of a NPS for National Road and Rail Networks (the draft NPS) was published by the DfT on 4 December 2013. The draft NPS is not project specific. The underlying substance of the draft NPS has been addressed in the NDR Application documentation.

1.9 Special Considerations Affecting the Land (Section 10.0)

- 1.9.1 The draft DCO includes provision for the compulsory acquisition of the Marriott's Way public amenity path (plots 2/26, 2/27, 2/28 and 2/29) which is considered to be open space land and therefore special category land.
- 1.9.2 Acquisition powers are being sought for a new right upon plots 2/26, 2/28 and 2/29. The freehold ownership of these plots would remain with Broadland District Council and the open space status of these plots would remain.
- 1.9.3 Powers are being sought to acquire plot 2/27 and replacement land is proposed to be provided on either side of Marriott's Way on the approaches to the proposed Marriott's Way Overbridge of the NDR. The land carried upon the Overbridge deck level will also be provided as part of the replacement land, providing a continuous open space corridor of the Marriott's Way public amenity path across the NDR. This replacement land would vest in Broadland District Council. For the period of the bridge construction, NCC will provide an alternative route for use by the public.
- 1.9.4 The draft DCO includes provision for the compulsory acquisition of part of a fuel allotment (plot 10/45), which is also special category land. Replacement land is proposed to be provided.

1.10 Impacts on Statutory Undertakers (Section 11.0)

1.10.1 The draft DCO includes the provision for the compulsory acquisition of statutory undertakers' land, specifically Eastern Power Networks, Anglian Water Services Ltd, Network Rail Infrastructure Ltd, Norwich Airport Ltd and National Grid Gas plc. Details are provided in Section 11 of this Statement.

1.11 Obstacles and other Consents (Section 12.0)

1.11.1 NCC has obtained the consent of the Highways Agency to include Crown land in the DCO in respect of land at Postwick. NCC is currently seeking the consent of the Highways Agency to include Crown land in the DCO in respect of both land at Marriott's Way (where rights previously owned by the former BRB (Residuary) Ltd have recently been transferred to the Highways Agency Historical Railways Estate, for and on behalf of the Secretary of State for Transport) and further land at Postwick (plot 12/55, where there is the potential for the Crown to retain an interest following the de-trunking of the former A47 road).

1.11.2 Consent for discharge of water to the aquifer may be required. Any discharge consents required will be sought from the Environment Agency.

1.11.3 Protected Species Licences will be sought from Natural England. A draft application has been submitted already.

1.11.4 Consent to obstruct watercourses may be sought from the Broads Internal Drainage Board.

1.11.5 Prior consent for works on construction sites may be sought from the relevant local authority under section 61 of the Control of Pollution Act 1974.

1.11.6 Temporary road traffic regulation orders will be sought, as necessary.

1.12 Human Rights (Section 13.0)

1.12.1 The DCO has the potential to infringe the human rights of persons who own property or have rights in the land proposed to be acquired pursuant to the DCO.

1.12.2 NCC considers that there would be very significant public benefit arising from the grant of development consent for the NDR Scheme. That benefit can only be realised if the development consent is accompanied by the grant of powers of compulsory acquisition.

1.12.3 The significant public benefits of the NDR Scheme are considered to outweigh the effects of the Scheme upon persons with an interest in the land required for the Scheme. NCC believes that there would not be a disproportionate interference with the rights of such persons under Article 8 and Article 1 of the

First Protocol of the European Convention on Human Rights. In addition, those affected by compulsory acquisition powers will be entitled to compensation.

2.0 Introduction

- 2.1.1 This Statement of Reasons ('this Statement') relates to an application for development consent ('the Application') made by Norfolk County Council ('NCC') to the Secretary of State under the Planning Act 2008 ('PA 2008')¹. The Application is for 'The Norfolk County Council (Norwich Northern Distributor Road (A1067 to A47(T))) Order' ('the DCO'). The DCO would, amongst other things, grant powers to construct, operate and maintain a new highway around the east and north of Norwich (the Northern Distributor Road ('NDR')) together with consent for any matters associated with the NDR. (The NDR and those associated matters are collectively referred to in this Statement as either 'the NDR', 'the NDR Scheme' or 'the Scheme').
- 2.1.2 This Statement has been prepared to comply with the requirements of Regulation 5(2)(h) of the Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2009 (the 'APFP Regulations')². It has been prepared in accordance with the relevant parts of the Department for Communities and Local Government September 2013 guidance, 'Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land' (the 'Guidance')³.
- 2.1.3 This Statement is required as an Application document in accordance with Regulation 5(2)(h) of the APFP Regulations, because the proposed DCO would authorise the compulsory acquisition of land or an interest in land or right over land.
- 2.1.4 The Application consists of a suite of documents, and this Statement should be read alongside and is informed by those other documents. In particular, regard should be had to:
- i. The Land Plans (document reference 2.2) – plans which (in accordance with APFP Regulation 5(2)(i)) show –
 - the land over which it is proposed to exercise powers of compulsory acquisition or any right to use the land;
 - any land in relation to which it is proposed to extinguish easements, servitudes and other private rights;
 - the special category land which is to be compulsorily acquired, or over which a right to use the land is to be acquired, and the replacement land which is proposed to be given for the special category land which is to be acquired.

- ii. The Book of Reference (document reference 4.3) – a document which (in accordance with APFP Regulations 5(2)(d) and Regulation 7) contains the names and addresses of persons who have certain interests in the land to be acquired or directly affected; specifies the owner of any Crown interest in the land which is proposed to be used for the purposes of the DCO; and specifies such land included for compulsory acquisition which is special category land and replacement land;
- iii. The Statement of Funding (document reference 4.2) – a document which (in accordance with APFP Regulation 5(2)(h)) indicates how the works which would be authorised by the DCO, including any compulsory acquisition costs, are to be funded;
- iv. The draft proposed Order (document reference 3.1) and accompanying explanatory memorandum (document reference 3.2); and
- v. Chapter 3 of Volume 1 of the Environmental Statement (document reference 6.1).

2.1.5 The remainder of this Statement,

- i. provides details of the NDR Scheme that results in the need for compulsory acquisition powers to be sought (Section 3.0);
- ii. outlines the need for the NDR Scheme and alternatives considered (Section 4.0);
- iii. explains the scope of compulsory acquisition powers being applied for (Section 5.0);
- iv. describes the land over which compulsory acquisition powers are being sought (Section 6.0);
- v. sets out NCC's purpose in seeking compulsory acquisition powers (Section 7.0);
- vi. provides the justification for seeking the compulsory acquisition powers sought and explains the compelling case in the public interest for the exercise of such powers to acquire land and create new rights compulsorily (Section 8.0);
- vii. sets out any known views of Government about the NDR Scheme (Section 9.0);
- viii. explains the special considerations affecting the land to be compulsorily acquired (Section 10.0);

- ix. explains the position in respect of statutory undertakers' land and interests (Section 11.0);
- x. explains the position in respect of other obstacles or consents necessary to enable implementation of the NDR Scheme (Section 12.0);
- xi. considers the proposed compulsory acquisition powers in the context of the Human Rights Act 1998 (Section 13.0). and
- xii. explains further the purpose in seeking acquisition powers (Appendix 1), the details of negotiations with owners of interests in land and other information relating to land interests (Appendix 2), and details certain access and highway related matters (Appendix 3).

3.0 Scheme Details

3.1 The NDR Scheme

- 3.1.1 The Scheme (the Norwich Northern Distributor Road, known as the NDR) is a dual carriageway all-purpose strategic distributor road, which would run west to east around the north side of Norwich, linking the A1067 Fakenham Road, near Attlebridge to the A47 Trunk Road at Postwick. The NDR will be approximately 20.4km in length. A detailed description of the route is set out in Chapter 2 of Volume 1 of the Environmental Statement (document reference 6.1).
- 3.1.2 The route of the Scheme is, for the most part, within Broadland District. It does, however, for a short stretch close to Norwich International Airport, fall within the administrative area of Norwich City Council. A very small part of the works at Postwick falls within The Broads Authority.
- 3.1.3 In order for the new dual carriageway NDR mainline route to link into the existing highway network the Scheme includes the construction of a number of new highway features. These include six (6) overbridges, four (4) underbridges, two (2) grade separated junctions, eight (8) at-grade roundabout junctions, two (2) on-line access roundabouts, three (3) off-line roundabouts and one (1) major / minor priority junction. The works will necessitate the diversion of a number of utility pipelines and services, a series of road closures and the stopping up, diversion and closure of a number of tracks and public and private rights of way.
- 3.1.4 In addition to the construction of the NDR itself, the Scheme also includes the creation of approximately 25km of new links suitable for use by pedestrians, cyclists and equestrians, plus the provision of seven (7) bat gantries. A number of complementary works are also proposed, including the provision of a shared footway/cycleway, the relocation, closure and widening of a number of junctions and certain highway improvements to parts of the existing network.

3.2 Status of the Scheme under the Planning Act 2008

- 3.2.1 At the time NCC declared its intention to the Secretary of State for Transport that it proposed to make an application to him for the NDR Scheme in February 2013, the NDR was a Nationally Significant Infrastructure Project (NSIP).

- 3.2.2 As a result of changes to certain NSIP definitions made by the Highway and Railway (Nationally Significant Infrastructure Project) Order 2013⁴, from 25 July 2013 the NDR Scheme ceased to be an NSIP. As a result, a qualifying request was made by NCC in July 2013 to the Secretary of State for Transport, seeking that he direct under section 35 of the PA 2008 that the NDR Scheme be treated as development for which development consent is required.
- 3.2.3 On 9 August 2013, the Secretary of State for Transport directed, under section 35 of the PA 2008, that the NDR Scheme by itself is a project of national significance and is to be treated as development for which development consent is required. His reasons were given as –
- ‘it provides a direct connection to/from an international airport to the Trans European Network-Transport (TEN-T) and the Strategic Road Network. The TEN-T link is to the A47, one of only a limited number of Roads in the East of England which is recognised as such; and
 - in addition the scheme:
 - supports national growth potential by directly supporting over 135ha of proposed employment growth; and
 - improves connection to/from the Great Yarmouth Enterprise Zone which supports the offshore energy industry and supply chain.’
- 3.2.4 As the NDR Scheme is the subject of a Section 35 direction, a DCO is required.

3.3 The A47(T) Postwick Junction

- 3.3.1 At its eastern end, the NDR would link with the strategic road network via the A47(T) at Postwick. This link would require the closure of the existing eastbound merge and diverge A47(T) slip roads and the construction of new eastbound merge and diverge slip roads, forming part of an improved grade separated junction at Postwick.
- 3.3.2 Separately from the current proposals for the NDR to join the A47 at Postwick, which form part of NCC's application for development consent for the NDR under the Planning Act 2008, NCC has the benefit of extant planning permission granted by Broadland District Council in 2011 for works to improve the existing Postwick Junction. That planning permission is a hybrid permission consisting of outline consent for the development of a business park at Broadland Gate (the Broadland Gate Business Park, being promoted by a developer) and full consent for highway improvements to the Postwick Junction. The junction improvement works are designed to address capacity and congestion problems which are predicted to persist and worsen as a result of increasing traffic demand.

- 3.3.3 The planning permission (Reference: 20081773) includes all of the junction improvement works which relate to the highway within NCC's control, but excludes the parts of the Postwick junction which are part of the A47(T). This is because the Highways Agency, on behalf of the Secretary of State for Transport, has permitted development rights in relation to improvement works within the existing highway, and it is proposed that works on such land will be carried out by NCC pursuant to an agreement between NCC and the Highways Agency, on behalf of the Secretary of State for Transport, under section 6 of the Highways Act 1980⁵.
- 3.3.4 In addition, the implementation of parts of the junction improvement works is subject to the making, by the Secretary of State, of a Side Roads Order and a Slip Roads Order under the Highways Act 1980. These Orders were made in draft by the Highways Agency in 2009 and were the subject of a public inquiry in July 2013. The Secretary of State's decision as to whether or not the Orders shall be made is currently awaited. If the Secretary of State decides to make the Orders, NCC will have all the necessary statutory consents in place to enable implementation of the improvement works at the Postwick Junction and would commence those works as soon as practicable.
- 3.3.5 In developing the design of the proposed improvements to the existing Postwick Junction, NCC considered the linkage between the NDR and the A47(T) in physical and operational terms. Therefore, if the existing Postwick Junction is improved pursuant to the planning permission and approved Side Roads Order and Slip Roads Order, it would accommodate the linkage between the NDR and the A47(T).

4.0 The Need for the Scheme and Alternatives considered

4.1 Introduction

- 4.1.1 This section provides a summary of the need for the Scheme and the alternatives considered. A more detailed explanation is provided in Chapter 3 of Volume 1 the Environmental Statement (document reference 6.1).
- 4.1.2 The NDR is needed to improve connectivity and accessibility across both the northern part of the Norwich urban area and areas of the county in an arc from the north west to the east of this main urban area. It will also provide the basis of the transport infrastructure required to both address existing and future problems and achieve the growth objectives which have been identified for Norwich and its surrounding area.
- 4.1.3 The possibility that the need could be met in some other way, for example by a different standard NDR, by an NDR following a different route, or without road construction has been addressed in principle and in detail over a lengthy period. The studies undertaken confirm that the NDR is an essential component of the package of transport measures required. Analysis of other approaches has confirmed that it is not possible to meet the need without the NDR, and that the application proposals are the most appropriate response.

4.2 Context for the Need

- 4.2.1 Located within a largely rural county, Norwich has historically been a focal point on which the road network converges. The most significant transport legacy of the past is a road network which is structured around a series of routes which radiate out from the centre of the City. These routes provide links between the City and an extensive area that includes most of the county of Norfolk and substantial areas of north Suffolk.
- 4.2.2 Various measures have been taken historically in response to the issues associated with an increasing amount of traffic within the City. These have included the provision of an inner and outer ring road within the urban area, the provision of a strategic A47(T) Norwich Southern Bypass to the south of the City, the implementation of works and strategies to restrict the use of the private car within the City and the implementation of works and strategies to support alternatives to the use of the private car.
- 4.2.3 For obvious reasons of geography, Norfolk is on the periphery of the national road and rail networks. There are no motorways in the county and only three trunk roads providing access to other towns and cities and the wider strategic road network of the country. Norwich International Airport, which is not on the strategic road network, plays, amongst other things, a nationally significant role in the offshore energy industry, as a base for four of the leading offshore helicopter transport services and the location for offshore survival training.

- 4.2.4 The rail network that serves Norwich and the surrounding county is similarly at the periphery of the national system. It plays a much smaller role in providing local transport opportunities than the road network.
- 4.2.5 Norwich is one of the largest urban areas in the East of England, and a significant centre for employment, tourism and culture. The city exerts a powerful economic, social and cultural influence well beyond its administrative boundaries.
- 4.2.6 A number of objectives and aspirations which centre on substantial population growth and economic development have been identified and determined for the City of Norwich and its surrounding area. These objectives and aspirations, which have been identified by those charged with undertaking functions relating to the management and future development of the area, recognise and reflect:
- i. the overarching national growth agenda;
 - ii. the need, identified at national level, for every part of the UK (and not just London and the south-east) to fulfil its potential and thereby drive strong and lasting growth and create a balanced economy;
 - iii. the fact that Norwich is one of the largest and most important urban centres in the East of England and has the potential to contribute significantly to the country's growth and economic development needs; and
 - iv. the fact that Norwich and its surrounding area is a suitable location to provide for development that will contribute to growth and economic development needs.
- 4.2.7 The Joint Core Strategy⁶ (JCS) prepared by the Greater Norwich Development Partnership (GNDP) sets out an overall spatial vision for the future of the area. It highlights Norwich as a main focus for growth for new homes and jobs, leisure, cultural and educational development. A target of at least 27,000 additional jobs and at least 36,820 new homes are to be delivered within the period 2008 to 2026. A large proportion (33,000 dwellings) is to be focused within the 'Norwich Policy Area' (NPA), the 50 parishes within and around Norwich.
- 4.2.8 The North East Growth Triangle (NEGT) located within the NPA is considered by the GNDP to be a sustainable location for significant growth. The soon to be adopted parts of JCS Policy 9 seek to deliver a minimum of 7,000 dwellings by 2026 growing to around 10,000 dwellings in the NEGТ.

4.2.9 Within the JCS, new employment locations include a new business park of around 30ha associated with Norwich International Airport and focussed on uses benefiting from an Airport location and an extension to the Broadland Business Park of around 25ha. The soon to be adopted JCS Policy 9 proposes a further 25ha of employment land at Rackheath as part of the proposed NEGТ. These proposals form part of the 135ha of employment growth referred to in the Section 35 Direction earlier referred to.

4.2.10 Although set at the local or sub-regional level, the objectives and aspirations for Norwich and its surrounding area are supported by and consistent with objectives set at the national level.

4.3 The Identified Problems

4.3.1 One of the key issues affecting the City and its surroundings relates to the transport network. Fundamentally, the problems are caused by the limitations of the road network in and around the urban area, and its incapacity to deal with the demands placed on it. This issue will get worse as Norwich grows, which is what the growth objectives and aspirations outlined for the area seek to achieve.

4.3.2 In summary, the transport and related problems caused include:

- i. High volumes of traffic on routes such as the Outer Ring Road and the radial routes, which in combination with the physical characteristics of these routes leads to congestion and associated issues.
- ii. High volumes of traffic using inappropriate routes. This includes traffic travelling through the historic City Centre, traffic 'rat running' along urban residential streets and routes to move between the main radial routes and traffic using rural routes in an attempt to get around the north of Norwich.
- iii. Poor access to the strategic road network to and from areas and facilities located to the north of Norwich such as Norwich International Airport and areas of north and north-east Norfolk.
- iv. Adverse implications for existing businesses and services in terms of access to workplaces for staff, the importing and exporting of goods and the ability of customers to access businesses and services.
- v. Adverse implications for the growth and development of both Norwich and its surrounding area, and other locations further afield, which result from an effective restriction on the extent to which planned and proposed development can be brought forward and growth aspirations achieved.

- vi. Adverse implications on the effective operation and attractiveness of public transport within the City and its surroundings, and a limitation on the ability to provide further public transport, walking and cycling improvements.
- vii. Adverse environmental and quality of life implications.

4.4 Resolving the Identified Problems

- 4.4.1 Transport and related problems within and around the City of Norwich have been the subject of analysis, discussion and consultation over the course of many years. A cross-local authority boundary approach to planning for the future development of the transport system has been taken. This has taken the form of the Norwich Area Transportation Strategy (NATS).
- 4.4.2 The overall strategy set out in NATS is that a package of transport measures, interventions and improvements are required, including a Norwich Northern Distributor Road.
- 4.4.3 Taking account of the identified problems and having regard to the considerations and analysis undertaken, the specific objectives of the NDR are to:
 - i. reduce traffic levels and congestion on the existing road network both within the urban area and beyond to the north;
 - ii. facilitate journeys that are currently difficult and require traffic to use roads that are unsuitable for the type and volume of traffic that is currently accommodated;
 - iii. provide access to and help to deliver, planned and potential areas of growth, and enable those areas to be free of the need to incorporate provision for extraneous traffic;
 - iv. provide improved transport connectivity, including with the national strategic road network, for existing and future areas of residential and employment development, Norwich International Airport and the wider area of north and north-east Norfolk;
 - v. increase the opportunities for improving provision for public transport and other sustainable forms of transport and for improving traffic management within the City Centre, thereby encouraging modal shift, and
 - vi. improve traffic related environmental conditions for residents in the northern suburbs of Norwich and outlying villages, whilst minimising the adverse environmental impacts of the NDR.

- 4.4.4 Through the achievement of these objectives, the NDR will facilitate the step change in transport infrastructure that is required to address existing deficiencies and serve the full scale of population and economic expansion identified in the objectives and aspirations for the area.
- 4.4.5 The JCS notes that achieving the full economic potential of the area is dependent on improved connectivity (paragraph 5.38). JCS policy 6 highlights the need to implement NATS, including construction of the NDR, and Appendix 7 of the JCS identifies the NDR as a 'Priority 1 Infrastructure' requirement which is needed for the overall scale of growth identified.
- 4.4.6 The NDR is also identified in Norfolk County Council's Local Transport Plan⁷ as an element of the framework that will facilitate growth in the Greater Norwich area and provide strategic access to north-east Norfolk and Norwich International Airport. Norfolk County Council's economic growth strategy⁸ (at its section 5.2) highlights the NDR as being vital to the continued economic success of the Greater Norwich area, and also of benefit to north Norfolk and Great Yarmouth.
- 4.4.7 The Norfolk Infrastructure Plan was produced with the objective of delivering economic growth in Norfolk⁹. It identifies the NDR as a key infrastructure project. It notes that the NDR will address existing traffic issues to the north and east of Norwich and the City Centre and deliver economic benefits for Norwich and North Norfolk. The benefits of the NDR providing easy and reliable access to the national trunk road network and to Norwich International Airport are identified as considerable.
- 4.4.8 The Government in its National infrastructure Plan¹⁰ (2011) made it clear that to remain globally competitive the UK needs to address issues with its existing transport system and develop infrastructure capable of supporting a dynamic, modern economy. The NDR as a Local Authority Major Scheme is identified as one of the Government's key areas of infrastructure investment. The National Infrastructure Plan 2013¹¹ (published on 4 December 2013) identifies the NDR as a 'key project' and as one of the Government's Top 40 priority infrastructure investments.
- 4.4.9 The traffic impact of the NDR is detailed within the Transport Assessment (document reference 5.5) and associated documentation that supports the NDR DCO Application. The information provided in those documents demonstrates that, in summary, the NDR will:
- reduce traffic flows on the northern sections of the Outer Ring Road;
 - reduce traffic flows on key northern radial routes;
 - reduce City Centre through traffic;
 - reduce congestion;

- reduce traffic flows on unsuitable residential routes and on rural routes to the north of the urban area;
- significantly improve access for north Norwich and north and north east Norfolk to the strategic road network;
- provide direct dual carriageway access from all of the key northern radials to the national strategic road network;
- improve access to Norwich International Airport;
- provide the transport infrastructure needed to allow planned and proposed growth to come forward;
- increase the opportunities for improving the provision for pedestrians and cyclists; and
- increase the opportunities for improving public transport provision.

4.5 Consideration of other approaches leading to the development of the proposals

- 4.5.1 The need for a distributor road around the north of the City of Norwich emerged in 1992 as a conclusion of the review of the transport strategy for the Norwich area (NATS). The initial proposal was for a 'full length' NDR, i.e., one which would terminate in junctions with the A47(T) on both the western and the eastern flanks of the City.
- 4.5.2 The 1992 NATS review acknowledged that the construction of an NDR would inevitably have an impact on the environment of the area through which it passed. Studies showed that adverse effects were particularly likely on the most westerly section of the route, between the A1067 Fakenham Road and the A47(T)(west), where all possible alignments would have to cross the valley of the River Wensum, which is designated as a Special Area of Conservation (SAC).
- 4.5.3 Transport strategy for the Norwich area was next comprehensively reviewed over the period 2002 – 2005. A wide-ranging 'long list' of over 30 possible transportation interventions for inclusion in the review of possible strategies was identified. Possibilities included road-based and public transport interventions and the application of land use policies and other measures to reduce the demand for travel and encourage modal shift. Following a qualitative assessment of the performance of each intervention in addressing the problems and issues of the area, those possibilities that performed inadequately were not taken forward.

- 4.5.4 Possibilities not taken forward included a short NDR to the north-west of the City, between the A140 or the A1067 and the A47(T)(west). It would be much less effective than other versions of the NDR, the traffic benefits would be limited and it would not facilitate growth, which is largely planned to the north-east of the City. The section between the A1067 and the A47(T)(west) would also be likely give rise to significant adverse environmental effects, which studies showed and consultation at the time confirmed could not easily be mitigated.
- 4.5.5 Improvements to the Outer Ring Road were also considered. Even if they could be implemented acceptably within the urban environment, such improvements would be much less successful than the NDR options in improving accessibility and meeting the economic objectives. They would also fail to address the growth issues on the north-east edge of the city. Notwithstanding this conclusion, however, the principle of improvements to the existing road network as an alternative to the NDR was retained for re-examination.
- 4.5.6 The following range of public transport interventions were also considered:
- a light rapid transit (LRT) system;
 - a guided bus route along the Marriott's Way corridor;
 - orbital bus routes;
 - cross-city bus routes linking existing Park and Ride sites;
 - a new Park and Ride site at Taverham/Drayton;
 - interchange facilities at key nodes within Norwich;
 - additional rail stations to the east of Norwich, and
 - revenue support for additional bus services.
- 4.5.7 A qualitative assessment of the performance of these options in resolving the transport problems and issues and the NATS aims and objectives concluded that whilst neither individual public transport interventions or a combination of them would meet the need, public transport improvements were key elements of the solution.
- 4.5.8 Following the initial assessment outlined above, the following six possible strategies were assessed using an approach based on the Department for Transport's WebTAG methodology.

- Option 1 – A ‘full length’ NDR linking the northern radial routes with the A47(T) on both the east and west sides of the City; complementary measures to reduce the impact of traffic on minor roads and residential streets around the north of Norwich; improvements to junctions on the Inner and Outer Ring Roads; improvements to radial bus services, and measures to reduce through traffic in the City Centre.
- Option 2 – As Option 1 but a ‘half length’ NDR between the A47(T) at Postwick and the A140 Cromer Road, adjacent to Norwich International Airport.
- Option 3 – As Option 1, but a ‘three quarter length’ NDR from the A47(T) at Postwick, past Norwich International Airport to the A1067 Fakenham Road.
- Option 4 – A new orbital bus service around Norwich; major improvements to existing radial bus services; improvements to junctions on the Inner and Outer Ring Roads, and a ‘Ring and Loop’ system to prevent car drivers making through trips within the Inner Ring Road.
- Option 5 – A Light Rapid Transit service on a route linking Thickthorn Park and Ride, Norfolk & Norwich Hospital, the University of East Anglia (UEA), the City Centre and railway station, Postwick Park and Ride, Broadland Business Park and residential development in the north east fringe of Norwich; improvements to junctions on the Inner and Outer Ring Roads; road user charging or workplace parking charging within the Inner Ring Road; a Ring and Loop system to prevent car drivers making through trips within the Inner Ring Road, plus additional physical restrictions on car access to the City Centre as a consequence of LRT alignment through the City Centre.
- Option 6 – Planning new development so as to reduce the distance between home, work and services; financial incentives to implement workplace travel plans (including targets for reduced car use by existing businesses as well as those expanding or relocating); improvements to walking and cycling networks, including measures to support safer and healthier journeys to school; the promotion of alternative modes of transport and alternative fuels; and delivery of individualised marketing campaigns in support of travel plans.

4.5.9 The assessment in 2005 concluded that a northern distributor road was required in order to address the transport problems. The full NDR would have to cross the Wensum Special Area of Conservation (SAC) and pass through a landscape containing historic parkland and it was considered that this would give rise to impacts that could not be mitigated. The review concluded that even if the link between the A1067 and the A47(T) was not built, a ‘three-quarter length’ NDR would still achieve the objectives set by the NATS review.

- 4.5.10 In respect of the public transport options, the assessment concluded that cross-city bus routes linking existing Park and Ride sites, the development of interchange facilities at key nodes within Norwich and additional rail stations on the Cromer line to the east of Norwich would not have sufficient impact across the NATS area to be considered as strategic alternatives in their own right or in combination, but they could play an important role in complementing the NDR options.
- 4.5.11 In 2009, following the submission by NCC of a Major Scheme Business Case, the Department for Transport (DfT) granted funding for the NDR from the A140 to the A47(T) at Postwick, subject to progression by NCC of the NATS public transport measures which were complementary to the NDR.
- 4.5.12 A public transport model was developed to test public transport options in preparing the Major Scheme Business Case (MSBC) for the NDR. A combination of Bus Rapid Transit (BRT) with the best performing bus improvements was adopted as the preferred public transport option for modelling and a WebTAG appraisal for the MSBC. The option comprised improvements to the frequency of radial services on existing routes; a new bus service on a part of the Outer Ring Road, which would provide service to areas similar to that of the NDR; and a BRT corridor linking Sprowston, the City Centre, the University of East Anglia (UEA), Norfolk and Norwich Hospital and the Norwich Research Park.
- 4.5.13 Following the submission of the MSBC, the DfT asked NCC to investigate the sensitivity of the Benefit/Cost Ratio (BCR) for the Public Transport (PT) Option presented in the MSBC to higher levels of patronage on the new and enhanced services, thus generating additional revenue and reducing the level of subsidy required.
- 4.5.14 The results of these tests suggested that additional bus services included in the PT Option would have to operate without subsidy to achieve a BCR of 1.5 or above. In addition, patronage on the existing core bus routes enhanced under the PT Option (either through the introduction of a more frequent bus service or a new BRT service) would need to increase by 25% to achieve a BCR of circa 1.5 and by 32% to achieve a BCR of circa 2.0. These scenarios were considered to be implausible as they meant that the orbital bus service would have to generate sufficient patronage and revenue to operate without subsidy.

4.6 Overall review of options and alternatives 2013

- 4.6.1 Before deciding on the application proposals, the conclusion of previous analyses were reviewed in the light of traffic surveys undertaken in 2012, the results of the environmental studies, feedback from stakeholder and public consultation, and the progress of the Joint Core Strategy to adoption.

Measures to enhance the existing highway network as an alternative to the NDR

- 4.6.2 The 2002 - 2005 NATS review had considered whether forecast traffic growth in and around the north of Norwich could be accommodated on the existing network without an NDR. It concluded that this would require widespread major works to widen and reconfigure many carriageways and junctions, including several with frontage properties necessitating extensive property purchase and/or demolition.
- 4.6.3 The interconnected nature of the radial and orbital road system serving the City means that piecemeal improvements to sections where schemes might be feasible in isolation would not resolve the current traffic issues since other parts of the network, where improvement was impractical, would remain congested. This would leave overall route capacity and journey time reliability little changed and the propensity and opportunity for continued rat-running undiminished.
- 4.6.4 A comprehensive scheme of improvements to the existing road network between the A47(T) and the A1067 Fakenham Road would unavoidably have a direct and/or indirect impact on many residential and commercial properties, and would require demolition. It would be likely to face considerable opposition, especially from affected land owners and occupiers.
- 4.6.5 For the reasons summarised above, such a scheme would only partially meet the traffic need at the expense of widespread impacts on urban and residential environments. Traffic would continue to be drawn into the urban area and many cross-city journeys that would be facilitated by the NDR would not be facilitated or would be less well served by such a scheme, resulting in continued urban and rural rat-running. Such a scheme would also be less effective than an NDR in supporting urban expansion to the north east of the City and less effective in stimulating and serving economic growth generally.

Improvement to public transport provision as an alternative to the NDR

- 4.6.6 Extensive and detailed analyses of the potential for public transport improvements formed part of the reviews of NATS and supported the MSBC submission to the DfT. Each previous iteration of the analysis has reached the conclusion that public transport initiatives are an essential complement to the NDR but, even in combination, they do not constitute an alternative to it. By relieving the radials of traffic, the NDR would help to facilitate improvements in bus services. Freeing the internal road networks of new developments from the need to cater for extraneous through traffic would result in better residential environments, which would be more easily penetrated by local bus services, pedestrians and cyclists.

4.7 Alternatives to the application proposals

- 4.7.1 The analyses undertaken and summarised above conclude that the need can only be met by the construction of a NDR alongside the implementation of measures to improve public transport. The possibility of a 'full length' NDR having been discarded because of the likely significant impact on the environment of the Wensum Valley SAC, the remaining feasible alternatives were thus seen to be variations of the standard and alignment of the NDR between the A1067 and the A47(T) to the east of the City.
- 4.7.2 Environmental considerations figured largely in the judgements made about the most appropriate route. Once identified, these were matched against highway engineering considerations and likely effects on the human environment (advised by the results of public consultation) and a judgement reached as to the most appropriate alignment and design.
- 4.7.3 In summary, the alignment and form of the NDR are the result of iteration of options, informed by the output of land-use/transportation modelling and the preliminary conclusions of the studies carried out for the environmental impact assessment.
- 4.7.4 At the time of the 2002-2005 NATS review five possible route corridors were identified and considered between the A140 and the A1067, and three route corridor options were identified and considered east of the A140: an inner route immediately north of the then existing urban edge; an outer corridor to the south of Rackheath, Spixworth and Horsham St Faith and a central route between the two.
- 4.7.5 Between the A1067 and the A140, a direct route to the north of Taverham, Drayton and Thorpe Marriot was chosen in preference to an option which retained the use of the A1067 through those settlements. Such an option would do nothing to relieve those settlements or the built-up section of the A1067 which passes through them.
- 4.7.6 East of the A140 the outer corridor, although not free of impacts on the natural environment but having less impact than the other routes on the human environment and being best located to serve new development, was used as the basis for working up the application proposals.
- 4.7.7 Several variations within a corridor between the Airport and Horsham St Faith were investigated. The selected route passes as far as possible from dwellings in Horsham St Faith and Spixworth without interfering with the operation of the Airport. Between Thorpe End and the junction with the A47(T) at Postwick, the selected route was part of the arrangement of the junction with the A47(T) and the development of the Broadland Gate Business Park.

4.7.8 To confirm that the preferred option was the best option, the application proposals have been compared with five variations, which constitute the potential alternatives to the application proposals. The five variations are:

- Alternative 1 - Single carriageway on the same route as the preferred Scheme.
- Alternative 2 - Dual carriageway from the A47(T) at Postwick on a route the same as that of the preferred Scheme but terminating at the A140.
- Alternative 3 – As Alternative 2 but with the addition of a single carriageway from the A140 to the A1067.
- Alternative 4 – As the preferred Scheme except as a single carriageway between Fir Covert Road and the A1067.
- Alternative 5 – Developer-funded link roads between the north east radials (in the segment between the A47(T) at Postwick and the A140) in conjunction with the development of planned growth areas.

4.7.9 Alternative 1's fulfilment of the Scheme objectives is limited by the traffic capacity and attractiveness of its single carriageway to traffic. Its lower cost has resulted in a better assessment for effects on Public Accounts. However, this is outweighed by its assessments for other aspects. It has therefore been assessed as not performing as well as the Scheme, and has not been pursued.

4.7.10 Alternative 2 fails to address problems west of the A140, and this limits its fulfilment of Scheme objectives. Its lower cost has resulted in a better assessment for effects on Public Accounts. However, this is outweighed by its assessments for other aspects. It has therefore been assessed as not performing as well as the Scheme, and has not been pursued.

4.7.11 Alternative 3's fulfilment of the Scheme objectives is limited by the capacity and attractiveness of its single carriageway west of the A140. This is not outweighed by other aspects. It has therefore been assessed as not performing as well as the Scheme, and has not been pursued.

4.7.12 Alternative 4 would not provide a consistent standard for the NDR, it would not provide continuity of road type with the A47(T) Norwich Southern Bypass for the entire length of the NDR and would provide an inferior performance in terms of link accidents and user costs. Alternative 4 was included as an alternative to the Scheme within both the Section 47 and Section 42 statutory consultation under the Planning Act 2008. Feedback from the consultation indicated that of those that responded there was a majority support for the dual carriageway between Fir Covert Road and the A1067. It has therefore been assessed as not performing as well as the Scheme, and has not been pursued.

4.7.13 Alternative 5's fulfilment of Scheme objectives is very limited as it would serve as a direct access to development, would cater for large traffic flows and due to the lack of provision west of the A140. This is not outweighed by its significantly better assessment for its effects on Public Accounts due to its much lower cost. It has therefore been assessed as not performing as well as the Scheme, and has not been pursued.

5.0 Scope of Acquisition

- 5.1.1 Section 122 of the PA 2008 provides that “*An order granting development consent may include provision authorising the compulsory acquisition of land ...*”. Section 122 of the PA 2008 goes on to set out certain conditions, which must be met before powers of compulsory acquisition can be authorised by the Secretary of State - these are considered in section 8 of this Statement.
- 5.1.2 Regulation 5(2)(h) of the APFP Regulations requires a statement of reasons for seeking a DCO which authorises “*the compulsory acquisition of land or an interest in land or right over land*”.
- 5.1.3 The powers authorising the compulsory acquisition of land or interests in rights over land are contained in Articles 20, 22, 24 and 25 of the draft proposed DCO.
- 5.1.4 In addition, section 120 of the PA 2008 enables a DCO to contain provisions relating to, or to matters ancillary to, the development for which development consent is sought. The ancillary matters, which may be provided for in a DCO, include (but are not expressly limited to) those matters listed in Part 1 of Schedule 5 to the PA 2008, and in relation to the compulsory acquisition of land or interests in or rights over land include the following:
- i. the acquisition of land, compulsorily or by agreement (Schedule 5 paragraph 1);
 - ii. the creation, suspension or extinguishment of, or interference with, interests in or rights over land, compulsorily or by agreement (Schedule 5 paragraph 2);
 - iii. the abrogation or modification of agreements relating to land (Schedule 5 paragraph 3); and
 - iv. the payment of compensation (Schedule 5 paragraph 36).
- 5.1.5 The reference in Regulation 5(2)(h) to ‘acquisition’ of land or interests in or rights over land extends (by virtue of section 159 of the PA 2008) beyond merely the bare acquisition of land. It also includes the acquisition of an existing right over land or the creation of a new right over land. There are also various other powers sought in the draft proposed DCO which relate to land and which will, or may, interfere with property rights and interests.

5.1.6 The scope of the powers included in the draft proposed DCO, other than the 'main' compulsory acquisition powers, is briefly set out below. These powers are further outlined and explained in the DCO Explanatory Memorandum (document reference 3.2) that forms part of the Application, and in section 7 of this Statement.

- Article 8 – Power to alter layout, etc., of streets and Article 9 – Street works.
- Article 12 – Stopping up of streets and private access and Article 14 – Temporary prohibition or restriction of use of streets.
- Article 18 – Protective works to buildings.
- Article 19 – Authority to survey and investigate land.
- Article 29 – Rights under or over streets
- Article 30 – Temporary use of land for carrying out the authorised development and Article 31 – Temporary use of land for maintaining authorised development.
- Article 33 – Statutory undertakers, Article 34 – Apparatus and rights of statutory undertakers in land acquired or used and Article 35 – Recovery of costs of new connections.

5.1.7 All these additional powers relate to the ownership, occupation and use of land and will or may interfere with property rights and interests. As the justification for seeking these additional powers raises the same issues as apply to the acquisition of land and rights, this Statement also relates to them. Accordingly, the expression 'compulsory acquisition powers' includes these additional powers.

6.0 Description of Land subject to Compulsory Acquisition

6.1 Introduction

6.1.1 This section describes the land which is to be subject to the compulsory acquisition powers. The land is shown on the Land Plans (document reference 2.2) and the works proposed are represented on the Works Plans (document reference 2.3). In addition to the information in this Statement, descriptions of each numbered plot and details of ownership and other interests are provided in the Book of Reference (document reference 4.3). Land which is proposed to be acquired is shown in pink on the Land Plans, and land over which new rights are to be acquired is shown blue on the Land Plans. Land which is proposed to be temporarily used for or in connection with the carrying out of the authorised development is shown orange on the Land Plans, whilst replacement land ('exchange land') which is to be provided for special category land which is to be compulsorily acquired, is shown green on the Land Plans. Land which is shown striped pink and green on the Land Plans is land which is to be acquired and subsequently transferred as exchange land; and land which is shown striped orange and green on the Land Plans is land which is to be used temporarily and subsequently transferred as exchange land.

6.1.2 A full description of the land affected by the NDR Scheme, together with the key features and characteristics of its surroundings, is provided in Volume 1 of the Environmental Statement, Chapter 2 (document reference 6.1).

6.2 Location and Description of Works

6.2.1 The NDR would comprise a dual carriageway all-purpose strategic distributor road of approximately 20.4km running around the north side of Norwich. It would run from the A1067 Fakenham Road near Attlebridge in the west to the A47 Trunk Road at Postwick in the east.

Work Nos. 1 – 3

6.2.2 These works are located to the north-west and north of Taverham, which forms part of the north western urban fringe of Norwich. These works are located on or over existing parts of the public highway (the A1067 Fakenham Road, the C262 Fir Covert Road and the combined private access track and public highway known as Attlebridge Restricted Byway number 3), farmland, woodland, a private access track and small parts of the grounds of individual properties.

6.2.3 Land surrounding these works includes areas of woodland, farmland, and residential and business premises (including those located along Fir Covert Road).

Work Nos. 4 – 5

- 6.2.4 These works are located to the north of Taverham. They are located on or over existing parts of the public highway (the C261 Reepham Road, the U57168 Furze Lane / Breck Farm Lane and the combined private access track and public highway known as Drayton Restricted Byway number 6) farmland and a small part of the grounds of an individual property. These works are also located on or over parts of the recreational path known as Marriott's Way.
- 6.2.5 Land surrounding these works includes areas of farmland and individual properties located off Breck Farm Lane / Furze Lane and Reepham Road.

Work Nos. 6 – 8

- 6.2.6 Work numbers 6 to 8 are located to the north-east / north of Thorpe Marriott and to the south / south-east of Horsford. Thorpe Marriott is a settlement constructed from new in the 1990's as an extension to the urban area of Norwich. The village of Horsford has steadily expanded since the 1930's along the B1149 Holt Road and now encompasses several farm buildings and cottages of older date along its margins.
- 6.2.7 These works are located on or over existing parts of the public highway (the C261 Reepham Road, the C282 Drayton Lane, the B1149 Holt Road, the C253 Church Street, the combined private access track and public highway known as Drayton Restricted Byway number 6, the public highway known as Horsford Restricted Byway number 4/Dog Lane U57176, the combined private access track and public highway known as Horsford Restricted Byway number 5 and the Horsford Restricted Byway number 7), farmland, woodland, paddocks, private access tracks and small parts of the grounds of individual properties.
- 6.2.8 Land surrounding these works includes areas of farmland, woodland, individual properties and the settlements of Thorpe Marriott and Horsford.

Work No. 9

- 6.2.9 This work is located south-west of the settlement of Horsham St Faith in the vicinity of the existing junction of the B1149 Holt Road and the A140 Cromer Road. The work is located on or over existing parts of the public highway (the A140 Cromer Road/Holt Road, the B1149 Holt Road, the U57142 Holly Lane, the unnamed stretch of the U51625 public highway between the A140 Cromer Road and the B1149 Holt Road and a section of the unnamed stretch of the U57647 public highway running between the A140 Cromer Road and West Lane). The work is also located on or over farmland, woodland and land within Norwich International Airport.
- 6.2.10 Land surrounding this work includes farmland, woodland, residential properties, agricultural buildings, Manor Park Sports Club and Norwich International Airport.

Work Nos. 10 – 11

- 6.2.11 These works are located to the north of Norwich International Airport and to the south / south-east of the settlement of Horsham St Faith – a village with a historic core that has developed in a piecemeal fashion.
- 6.2.12 These works are located on or over parts of the existing public highway (the C251 Bullock Hill), land within Norwich International Airport, a private access track used for airport purposes, part of the grounds of the Norwich Aviation Museum, farmland, grassland and woodland.
- 6.2.13 Land surrounding these works includes Norwich International Airport, the City of Norwich Aviation Museum and the Petans Training Centre.

Work Nos. 12 – 13

- 6.2.14 These works are located to the north-east of Norwich International Airport and south of the settlement of Spixworth. This was originally a small village centred on the parish church, with Spixworth Hall and associated parkland lying adjacent to the west. Since the 1930's a large amount of residential development has occurred at the south eastern part of the settlement.
- 6.2.15 These works are located on or over parts of the existing public highway (the B1150 North Walsham Road, the C251 St Faiths Road, the C246 Buxton Road, the U57188 Quaker Lane, the U51200 Arthurton Road, the Horsham St Faith & Newton St Faith Bridleway number 6/Spixworth restricted byway number 1). These works are also located on or over farmland, woodland, a private access, grounds of an individual property and The Eastern Power Networks Spixworth Switching Station.
- 6.2.16 Surrounding land uses to the area covered by these works include Norwich International Airport, farmland, woodland, residential properties and agricultural buildings.

Work Nos. 14 – 15

- 6.2.17 These works are located to the south-east of Spixworth and to the west of Rackheath. Rackheath contains housing of different styles and ages and an industrial estate on land that was formerly used as a Second World War airfield. The route of these works runs through the northern part of Beeston Park.
- 6.2.18 These works are located on or over parts of the existing public highway (the A1151 Wroxham Road), farmland, woodland, a water course, private access tracks and grounds of individual properties.
- 6.2.19 Land surrounding these works includes farmland, a sewage works and residential properties.

Work Nos. 16 – 18

6.2.20 These works are generally located to the south-west of both Rackheath and west / south-west / south of New Rackheath.

6.2.21 These works are located on or over parts of the existing public highway (the C283 Salhouse Road, the C258 Broad Lane, the C874 Plumstead Road, a private access track with potential public highway rights known as Newman Road U57490 and an unnamed combined private access track with potential highway rights). These works are also located on or over farmland, farmland that forms part of a fuel allotment, woodland, private access tracks, disused private access tracks, an industrial storage area, a sewage pumping station, the forecourt of business premises, two properties (west of New Rackheath) known as 'The Barn' and 'Gazebo Farm' respectively, and the derelict Hall Farm buildings.

Work No. 19

6.2.22 This work is located to the south / south-west of New Rackheath at the point where the proposed NDR scheme crosses the Norwich to Cromer & Sheringham Railway. This work is located on or over parts of the railway line and farmland.

Work Nos. 20 – 21

6.2.23 These works are generally located to the east / south-east of Thorpe End and the Thorpe St Andrew area of Norwich. The small settlement of Great Plumstead is located further to the east of the works.

6.2.24 These works are located on or over parts of the existing public highway (A47 Trunk Road Norwich Southern Bypass, A47 Trunk Road Slip Roads, A1042 Yarmouth Road, C289 Broadland Way, C442 Middle Road, Low Road U59392, Smee Lane U59400, a combined private access track and the Great and Little Plumstead Footpath Number 5 and Postwick Footpath Number 2), farmland and a private access track.

6.2.25 Land surrounding these works includes farmland, Business Park, residential properties and agricultural buildings.

Work Nos. 22 – 24

6.2.26 These works are located to the north-west of Rackheath (work number 22), in Thorpe End (work number 23) and to the east of Spixworth (work number 24) respectively. These works are located on or over parts of the existing public highway (the A1151 Wroxham Road and the C258 Green Lane West in respect of work number 22, the C874 Plumstead Road in respect of work 23 and the B1150 North Walsham Road and the C249 Crostwick Lane / Rackheath Lane in respect of work number 24) and in respect of work number 22 an area of farmland.

7.0 Purpose in seeking Acquisition Powers

7.1 Introduction

- 7.1.1 The purpose of the acquisition powers being sought is to enable NCC to construct and operate the NDR within the limits of the land included in the DCO ('the Order limits'). The need for the NDR is explained in Chapter 3 of Volume 1 of the Environmental Statement (document reference 6.1) and summarised in section 4.0 of this Statement.
- 7.1.2 The purposes for which each parcel of land subject to compulsory acquisition powers is required are set out in Appendix 1 to this Statement. Appendix 2 to this Statement sets out further information relating to the ownership, the specific purposes for which land is required, other impacts on the land holding (such as severance and/or impacts on access) and the status of negotiations relating to the proposed acquisition of the land and / or new rights. The purposes for which the land is required are described having regard to the works as detailed in the description of the authorised development in Schedule 1 of the draft proposed DCO (document reference 3.1) and the plot / parcel numbers are as shown on the Land Plans (document reference 2.2) and as noted in the Book of Reference (document reference 4.3). Appendices 1 and 2 to this statement should be read in conjunction with and by reference to those documents.
- 7.1.3 Appendices 1 and 2 detail the land in which the freehold interest (and any other interests) are proposed to be acquired (i.e. outright acquisition of the land). This land is within the limits of deviation for the NDR works that are shown on the Works Plans (document reference 2.3). The purpose of acquiring outright the land detailed in Appendix 1 is to enable NCC to construct on that land the permanent works and to undertake the other specific activities detailed in Appendix 2 to this Statement.
- 7.1.4 Details of the land over which existing rights are to be acquired (i.e. extinguished) or over which new rights are to be created in favour of NCC are set out within Appendix 2. These rights are required in order to construct and carry out maintenance of the works.
- 7.1.5 Appendix 1 also contains details of the land of which NCC requires temporary possession. The purpose of using the land detailed as being required temporarily is to provide essential work sites and access, compounds, storage areas and working space to construct the NDR. These uses of the land are required temporarily as essential aspects of the construction process.
- 7.1.6 An explanation of the additional acquisition powers described in paragraph 5.1.6 is given below.

7.2 Article 8 - Power to alter layout, etc., of streets and Article 9 – Street works

7.2.1 The purpose of Article 8 is to allow the Applicant to alter the layout of and carry out works within certain streets, being both those identified in Parts 1 and 2 of Schedule 3 and those within the Order limits generally. The purpose of Article 9 is to allow the Applicant to carry out street works in accordance with the statutory rights under the New Roads and Street Works Act 1991. It is a model provision intended to permit the laying of utilities in streets for the purposes of the authorised project.

7.3 Article 12 – Stopping up of streets and private accesses and Article 14 – Temporary prohibition or restriction of use of streets.

7.3.1 The purpose of Article 12 is to give authority to the stopping up of the streets and private accesses which are identified in Schedule 6 of the draft DCO. It is based on the model provision, with the addition of private accesses utilising the same power. Schedule 6 sets out where a substitute street or access is to be provided, as an alternative for a street or access which is being stopped up, and identifies other streets and accesses which are to be provided as a consequence of the construction of the NDR. In general, the streets or accesses are required to be stopped up either where they are crossed by the NDR and will be replaced by a component of it, such as where a length of the C262 Fir Covert Road will be stopped up to be replaced by the NDR Fir Covert Road Roundabout, or because their continued existence would be incompatible with the Scheme. Appendix 3 of this Statement provides further explanation regarding the stopping up of streets and private means of access and of the provision of substitute, and other, streets, and of other alternative routes for stopped up streets, and accesses.

7.3.2 Article 14 is a model provision the purpose of which is to provide for the temporary prohibition or restriction of use of streets for the purposes of carrying out the authorised development. As per the model provision it applies generally, and also applies specifically to certain streets – those that are set out in Schedule 8 to the DCO. Paragraph (2) of Article 14 confers a power on the undertaker that where the use of a street has been temporarily prohibited or restricted it may use it as a temporary working site.

7.4 Article 18 - Protective works to buildings

7.4.1 Article 18 is a model provision, the purpose of which is to allow the Applicant to carry out protective works to buildings within the Order limits, subject to a number of conditions including the service of 14 days' notice (except in the case of emergency) and the payment of compensation.

7.5 Article 19 – Authority to survey and investigate land

7.5.1 Article 19 is a model provision, the purpose of which is to allow the Applicant to survey and/or investigate land including bringing equipment onto the land and making trial holes. The power is subject to a number of conditions including a requirement for 14 days' notice to be given, and is subject to the payment of compensation.

7.6 Article 29 – Rights under or over streets

7.6.1 Article 29 is a model provision, the purpose of which is to allow the undertaker to enter on and appropriate interests within streets where required for the purposes of the authorised development without being required to acquire that land. Provision is made for the payment of compensation in certain circumstances.

7.7 Article 30 – Temporary use of land for carrying out the authorised development and Article 31 – Temporary use of land for maintaining authorised development

7.7.1 The purpose of Article 30 is to allow the land specified in Schedule 11 to be temporarily used for the carrying out of the authorised development. Article 31 is similar to Article 30 but permits the temporary use of land for maintenance of the authorised project.

7.8 Article 33 – Statutory undertakers, Article 34 – Apparatus and rights of statutory undertakers in land acquired or used and Article 35 – Recovery of costs of new connection

7.8.1 The purpose of Article 33 is to provide for the acquisition of land of statutory undertakers which is identified in the Book of Reference (document reference 4.3). This Article includes a power to move the apparatus of those statutory undertakers and to extinguish rights. It is a model provision, except it is made subject to the protective provisions in Schedule 12, which are to apply to certain statutory undertakers as set out in that Schedule.

7.8.2 The purpose of Article 34 is to make provision in respect of the apparatus and rights of statutory undertakers in streets which are stopped up, including provision as to the relocation of apparatus. It is a model provision.

7.8.3 The purpose of Article 35 is to provide that persons who have to create a new connection following the removal of apparatus from stopped up streets may recover the costs of new connections from the Applicant. It is a model provision.

8.0 The Justification for seeking Powers of Compulsory Acquisition

8.1 Matters to which the decision maker must have regard

- 8.1.1 Section 122(1) of the PA 2008 provides that a DCO may only include compulsory acquisition powers if the conditions in section 122(2) and 122(3) are met. The conditions are:
- that the land is either: (a) required for the development to which the DCO relates, (b) required to facilitate or is incidental to that development, or (c) is replacement land which is to be given in exchange for the order land under section 131 or 132 of the PA 2008 (PA 2008 section 122(2)); and
 - that there is a compelling case in the public interest for the land to be acquired compulsorily (PA 2008 Section 122(3)).
- 8.1.2 The Guidance (at paragraph 11) provides advice in respect of the section 122(2) criteria.
- 8.1.3 In respect of criterion (a) of section 122(2), the Guidance highlights that the applicant should be able to demonstrate that the land in question is needed for the development for which consent is sought. It is further made clear that the Secretary of State will need to be satisfied that the land to be acquired is no more than is reasonably required for the purposes of the development.
- 8.1.4 In respect of criterion (b) of section 122(2), the Secretary of State must be satisfied that the land is required to facilitate, or is incidental to, the proposed development.
- 8.1.5 In respect of criterion (c) of section 122(2), the Guidance highlights that the Secretary of State will need to be satisfied that the compulsory acquisition is needed to provide replacement land to be given in exchange for certain types of special category land which are proposed to be acquired pursuant to the draft DCO, and that no more land is being taken than is reasonably necessary for that purpose, and than is proportionate. Issues relating to land to which sections 131 and 132 of the PA 2008 apply are considered further in section 10.0 of this Statement.
- 8.1.6 The Guidance also confirms (at paragraph 12) that in addition, section 122 requires the Secretary of State to be satisfied that there is a compelling case in the public interest for the land to be acquired compulsorily. Paragraph 13 of the Guidance goes on to make clear that for this condition to be met, the Secretary of State needs to be persuaded that the public benefits that would be derived from the compulsory acquisition (i.e. public benefits arising from the scheme facilitated by the compulsory acquisition) will outweigh the private loss that would be suffered by those affected by compulsory acquisition.

8.1.7 In addition to advice on the specific conditions and criteria within section 122, the Guidance (at paragraphs 8 to 10) sets out a number of general considerations that the promoter of a scheme requiring development consent under the PA 2008 should be able to demonstrate to the satisfaction of the Secretary of State, in respect of justifying an order authorising compulsory acquisition. These are:

- i. that all reasonable alternatives to compulsory acquisition (including modifications to the scheme) have been explored (paragraph 8);
- ii. that the proposed interference with the rights of those with an interest in the land is for a legitimate purpose and is necessary and proportionate (paragraph 8);
- iii. that the applicant has a clear idea of how it intends to use the land proposed to be acquired (paragraph 9);
- iv. that the applicant can demonstrate that there is a reasonable prospect of the requisite funds for acquisition becoming available (paragraph 9);
- v. that the purposes for which such powers are included in the draft DCO are legitimate and sufficiently justify interfering with the human rights of those with an interest in the land affected (paragraph 10).

8.1.8 The following sections of this Statement explain why NCC considers that the conditions in section 122 of the PA 2008 and the considerations set out in Guidance outlined in the preceding paragraphs are satisfied in respect of the NDR.

8.2 Section 122(2) – Requirement for the Order Land

8.2.1 Appendices 1 and 2 set out the details of the land required under the DCO and explain why the land is needed to enable both the construction and subsequent operation and maintenance of the NDR Scheme.

8.3 Section 122(3) – Compelling case in the public interest

8.3.1 NCC believes that there is a compelling case in the public interest which justifies the proposed compulsory acquisition of land and rights necessary to facilitate the delivery of the NDR Scheme. Chapter 3 of the Environmental Statement (document reference 6.1) and the summary of that which is provided in section 4.0 of this Statement explain the need for the NDR Scheme. To avoid repetition that detail is not repeated here. The NDR Scheme would:

- a. be in accordance with national and local planning and transport policy;

- b. meet the need which has been identified, as demonstrated in Chapter 3 of Volume 1 of the Environmental Statement and Section 4.0 of this Statement;
- c. contribute towards the achievement of the Government's objectives which underlie the reasons for which the Section 35 Direction was made;
- d. mitigate environmental impacts during the Scheme's construction, operation and maintenance phases;
- e. not be constructed without the exercise of powers of compulsory acquisition to acquire the land and rights necessary for the delivery of the Scheme.

8.3.2 NCC therefore considers that together, this Statement of Reasons and the related Application documentation demonstrate that there is a compelling case in the public interest for granting development consent, including authorisation of the use of powers of compulsory purchase for the NDR Scheme. NCC considers that the exercise of such powers would be necessary, justified and proportionate on the basis that the detrimental effects arising from any interference with private land and rights would be outweighed by the public benefits which would be brought about if the NDR Scheme were to be implemented pursuant to any grant of development consent.

8.4 Consideration of reasonable alternatives to compulsory acquisition

- 8.4.1 Appendix 2 of this Statement provides details of the position, at the time of the submission of the Application, on the state of negotiations and discussions with landowners affected by the NDR Scheme.
- 8.4.2 NCC will continue to liaise, discuss and negotiate with landowners to ensure that where the opportunity arises it can purchase interests by agreement. Continuing to negotiate with landowners to acquire land by agreement throughout the DCO process will help to ensure that parties at the examination are only dealing with the minimum number of compulsory acquisition issues.
- 8.4.3 Potential alternatives, including modifications to the Scheme, are discussed in Chapter 3 of Volume 1 of the Environmental Statement (document reference 6.1) and the summary provided in section 4.0 of this Statement.

8.5 Interference is necessary, proportionate and legitimate

- 8.5.1 Explanation is provided in Appendix 2 of this Statement as to why the identified land is required to be acquired compulsorily. This explanation demonstrates that the interference with private rights that would result from the acquisition of land in furtherance of the NDR Scheme is necessary, proportionate and legitimate.
- 8.5.2 NCC has sought to mitigate the direct impacts of the acquisition of land interests through a series of discussions with the affected landowners. Wherever possible the concerns of landowners have been taken on board and mitigation measures aimed at addressing those concerns have been incorporated into the Scheme design. Severance issues have been minimised by ensuring that access to retained land continues to be provided, and in order to address concerns about noise and visual impacts arising from the Scheme, earth bunds and areas of landscaping are being provided to screen properties.
- 8.5.3 The design of the Scheme has also been informed by a general approach which seeks to minimise the direct impact of land acquisition by, wherever possible, avoiding residential properties and ensuring that the Scheme is distanced from larger residential areas.

8.6 Fair compensation and certainty of funding

- 8.6.1 Compulsory acquisition powers and the related 'compensation code' (comprising a body of statutes and case law) serve an important function in ensuring that the compensation paid to landowners and others affected by compulsory acquisition represents a fair open market value. This benefits both those to whom compensation may be payable and NCC as the acquiring authority.
- 8.6.2 In the event of compensation not being agreed a judicial process applies. Compensation disputes will be decided, upon reference to it, by the Upper Tribunal (Lands Chamber). Decisions made by the Upper Tribunal may be appealed to the Court of Appeal.

8.6.3 The compulsory purchase procedure, therefore, provides certainty of outcome (the land and / or rights will be acquired), certainty of liability to compensation (fair open market price) and fairness of outcome (recourse to arbitrary / judicial process if necessary in case of a dispute on land value). The procedure, therefore, provides fair treatment for all parties involved in it.

8.6.4 As detailed in the separate Funding Statement application document (document reference 4.2) the NDR will be jointly funded by the Department for Transport (DfT) and NCC. The current total cost estimate for the NDR Scheme is £148.55 million, which includes an amount to cover the compulsory acquisition costs. DfT's funding grant is capped at £86.5m, meaning the remaining funding will be underwritten by NCC.

8.7 Human Rights

8.7.1 Issues relating to the consideration of the interference with Human Rights are addressed separately in section 13.0 of this Statement.

9.0 National Policy: The view of the Government

- 9.1.1 The section 35 Direction was given without prejudice to the Secretary of State's consideration of the Application, but the Government has expressed other views which are relevant to and support the proposed NDR.
- 9.1.2 The National Infrastructure Plan 2011 ('the NIP 2011') set out a strategy for meeting the infrastructure needs of the UK economy. It recognised that infrastructure networks form the backbone of a modern economy and are a major determinant of growth and productivity. The Government considers that historically, UK infrastructure has suffered from under-investment and a lack of coherent strategic forward planning. The Government makes it clear in the NIP that, *"To remain globally competitive, the UK needs to address these failures and develop an infrastructure capable of supporting a dynamic, modern economy"* (National Infrastructure Plan 2011 – Executive Summary).
- 9.1.3 As part of the Government's strategy for meeting the infrastructure needs of the UK economy, the NIP identified 40 key areas of infrastructure investment. Referred to as 'Priority infrastructure investment' these areas include "Local authority major transport schemes – development pool projects" (NIP 2011 Table 2.B). Local Authority schemes considered by the Government to fall within this priority infrastructure investment area were initially announced in stages in late 2011. The NDR was given programme entry status into the 'development pool project' investment area in December 2011 (Local Authority Major Transport Scheme – Development Pool Schemes – Scheme Decisions – December 2011). In the National Infrastructure Plan 2013 ('the NIP 2013') (published on 4 December 2013) the NDR is identified as a 'key project' and one of the Government's Top 40 priority infrastructure investments.
- 9.1.4 Section 104 of the Planning Act 2008 highlights the importance of National Policy Statements (NPS) in the determination of applications for development consent. The consultation draft of a NPS for National Road and Rail Networks (the draft NPS) was published by the Department for Transport on 4 December 2013. The draft NPS is not project specific. The underlying substance of the draft NPS has been addressed in the NDR Application documentation.

10.0 Special Considerations Affecting the Land

10.1 Special Category Land – Open Space

- 10.1.1 The draft DCO includes the provision for the compulsory acquisition of land (plots 2/26, 2/27, 2/28 and 2/29) which forms a length of the Marriott's Way recreational public amenity path, and which is considered to be open space land. This land comes within the definition of special category land as defined in the APFP Regulations (Regulation 2(1)).
- 10.1.2 Plots 2/26, 2/28 and 2/29 (which cover 1592, 4864 and 118 square metres, respectively) are required for the creation of a new right to enable construction of the Marriott's Way Overbridge. The freehold ownership of these plots would remain with Broadland District Council (the current freehold owner) and the open space status of these plots would be maintained. As such, NCC considers that the land in these plots (when burdened with the new right which NCC proposes to acquire pursuant to the DCO) would be no less advantageous to Broadland District Council, to any persons entitled to any rights of common, and to the public than it was before (in accordance with section 132(3) of the PA 2008, and being a matter upon which the Secretary of State is required to be satisfied). No replacement land is therefore to be provided for these plots.
- 10.1.3 Plot 2/27 (which covers some 1246 square metres) is required for the new NDR alignment. As indicated in the Appendices to this Statement, powers are being sought to acquire this plot of land.
- 10.1.4 Replacement land is proposed to be provided for plot 2/27. This replacement land consists of four land areas (plots 2/23, 2/25, 2/34 and 2/37) on either side of Marriott's Way on the approaches to the proposed Marriott's Way Overbridge of the NDR. Additionally, a further plot of land (plot 2/27a), comprising only the land carried upon the Overbridge deck level of the Marriott's Way Overbridge (once it is constructed), will also be provided as part of the replacement land, providing a continuous open space corridor of the Marriott's Way recreational public amenity path across the NDR. The land and air space below the Marriott's Way Overbridge would, if and when acquired under the DCO, remain in the ownership of NCC as land necessary for the construction, operation and maintenance of the NDR.

10.1.5 The overall area that is covered by the proposed replacement land amounts to 1987 square metres, consisting of:

Plot 2/23	588 square metres
Plot 2/25	429 square metres
Plot 2/34	369 square metres
Plot 2/37	127 square metres
Plot 2/27a	474 square metres

10.1.6 This replacement land would vest in Broadland District Council, under the terms of the DCO, and be subject to the same rights, trusts and incidents as are attached to the open space land which it replaces. In view of this, NCC is content that its proposals accord with section 131(4) of the PA 2008 (a matter upon which the Secretary of State is required to be satisfied).

10.1.7 The replacement land will not, however, be available for a period of time (envisaged to be nine months) whilst the Marriott's Way Overbridge is being constructed. Prior to the closure of Marriott's Way and for the period of the bridge construction, NCC will provide an alternative route for use by the public across the route of the NDR Scheme.

10.2 Special Category Land – Fuel Allotment

10.2.1 The draft DCO also includes provision for the compulsory acquisition of part of a fuel allotment, situated to the south west of the C258 Broad Lane and to the north west of the C874 Plumstead Road. The fuel allotment land also comes within the definition of special category land, as defined in the APFP Regulations (Regulation 2(1)).

10.2.2 Plot 10/45 (which covers some 3117 square metres) forms part of a fuel allotment and would be acquired to create a new Private Means of Access.

10.2.3 Replacement land is proposed to be provided for plot 10/45. This replacement land consists of two areas of land, plot 10/41, which covers some 3117 square metres, and plot 10/42, which covers some 9209 square metres. Plot 10/41 will be provided at the same time as plot 10/45 is acquired for the scheme. Plot 10/42 will be provided once its temporary use as a Bridge Compound has finished. This replacement land would vest in the Trustees of the Great Plumstead Fuel Allotment Charity and be subject to the same rights, trusts and incidents as attached to the fuel allotment land which it replaces. In view of this NCC is content that its proposals accord with section 131(4) of the PA 2008 (a matter upon which the Secretary of State is required to be satisfied).

11.0 Impacts on Statutory Undertakers

- 11.1.1 The draft DCO includes the provision for the compulsory acquisition of statutory undertakers' land as detailed in the following paragraphs.
- 11.1.2 Plot 7/7 is to be acquired from Eastern Power Networks plc. The land comprises an electricity substation. The substation does not need to be replaced and the existing cable network will be amended accordingly. The precise details of the works and how they will be undertaken will be agreed with the Statutory Undertaker.
- 11.1.3 Plot 9/28 is land owned by Anglian Water Services Limited. The land comprises a foul sewage pumping station. It is envisaged that the pumping station will be able to remain operational in its current location after the works. If this is the case, despite being shown to be acquired, then only temporary use of the land will be required to enable the works to be completed. However, permanent acquisition is currently shown to enable the Applicant to ensure that any required works can be completed. The precise details of the works, and level of acquisition requirement, will be agreed with the Statutory Undertaker.
- 11.1.4 Plot 10/40 is owned by Network Rail Infrastructure Limited. Rights for construction of the NDR Bridge (Over Railway Line) are required. Access to carry out the works over the railway line will be secured under a Basic Asset Protection Agreement and a Bridge Agreement with the Company. The precise details of the works will be agreed with the Statutory Undertaker.
- 11.1.5 Plot 6/4 is owned by Norwich Airport Limited. The land is required for the new NDR highway alignment. The Airport is also tenant of other Plots required for the Scheme, although these do not form part of their operational site. Negotiations have been ongoing with the Airport over the impact of the Scheme on its operational activities. Agreement has been reached over the re-provision of the Airport's radar.
- 11.1.6 At approximate chainage 1100 a National Grid Gas plc high pressure gas main crosses the new NDR highway alignment. The main will require re-routing so that it crosses the new highway at 90 degrees. Negotiations are ongoing with National Grid Gas plc to agree the precise new route for the main. The company's existing agreements with the affected landowners will be amended to reflect the final route. Temporary working areas are included within the DCO to facilitate the necessary diversion works.
- 11.1.7 A number of other existing pipes, cables, wires etc will be affected by the Scheme. Discussions are continuing with all relevant companies to ensure the appropriate diversion of such pipes, cables and wires etc, to ensure the continuation of the statutory undertakers' service delivery

12.0 Obstacles and other Consents

12.1 Consent under section 135 of the PA 2008

- 12.1.1 Part of the land on which the NDR Scheme is to be constructed is Crown land, by virtue of the fact that it comes within the definition of Crown land in section 135 of the PA 2008 in that it is held by a Government department – the Department for Transport.
- 12.1.2 Section 135(1) of the PA 2008 enables development consent orders to authorise the compulsory acquisition of an interest in Crown land where that interest is held by a party other than the Crown. If provisions to compulsorily acquire such interests are to be included in a development consent order, then the consent of the appropriate Crown authority is needed before the development consent order can be made by the Secretary of State.
- 12.1.3 The Crown land which is required to be included in the DCO for the NDR Scheme is held by the Department for Transport. The Highways Agency, as the executive agency of that Department, is authorised to grant consent to the inclusion of Crown land in the DCO on the basis prescribed by section 135 of the PA 2008.
- 12.1.4 The DCO includes Crown land at Postwick, where the NDR would link with the A47(T) (see paragraphs 12.1.5 to 12.1.6 below) and at Marriott's Way public recreational amenity path, on which a crossing for non-motorised users will be provided over the NDR (see paragraph 12.1.7 below). There is also the potential for a Crown interest in plot 12/55 (see paragraph 12.1.8 below). The Crown land is shown on the Crown Land Plan (document reference 2.12)
- 12.1.5 NCC has obtained the consent of the Highways Agency, on behalf of the Secretary of State for Transport, to include Crown land at Postwick in the DCO for the NDR, and the Highways Agency's letter of consent forms part of the Application documentation (document reference 10.4). The Highways Agency's consent acknowledges that the works which NCC proposes to carry out on Crown land pursuant to the DCO, if it is made, are to be carried out pursuant to an agreement between NCC and the Highways Agency, on behalf of the Secretary of State for Transport, under section 6 of the Highways Act 1980 ('the Section 6 Agreement').
- 12.1.6 The Section 6 Agreement will authorise:
- a. construction and maintenance of the proposed new Postwick bridge over the A47(T), such bridge to run from the proposed new Postwick North East Roundabout (on the north side of the A47(T)) to the existing Postwick Park and Ride Junction (which will be signalled as part of the works to which the DCO relates);

- b. proposed improvements to be made to the existing Postwick bridge which currently crosses the A47(T) (and which runs from the existing Postwick North West Roundabout on the north side of the A47(T) to the existing Park and Ride Junction on the south side of the A47(T)); and
- c. proposed signalisation and improvements to be made to the existing Postwick Park and Ride Junction on the south side of the A47(T);
- d. carrying out works to close the existing eastbound merge and diverge A47(T) slip roads and subsequently re-opening part of the eastbound diverge slip road to provide access for non-motorised users between the A47(T) and the A1042 Yarmouth Road where it joins the Postwick North West Roundabout; and
- e. proposed construction of new merge and diverge eastbound slip roads running from the proposed new Postwick North East Roundabout to the A47(T).

12.1.7 Marriott's Way is a recreational public amenity path, providing public open space in the form of a footpath, bridleway and cycle track along the routes of two disused railway lines running between Aylsham and Norwich. British Rail Board (Residuary) Ltd (BRBR) formerly owned rights over the land known as Marriott's Way. With effect from 30 September 2013, BRBR was abolished and its interests in the historical railways estate (formerly known as the Burdensome Estate, which includes legacy bridges, abutments, tunnels, cuttings, viaducts and similar properties associated with closed railway lines and sales) have been transferred to the Highways Agency Historical Railways Estate. As the Highways Agency is an executive agency of the Department for Transport, and as the definition of 'land' in sections 235 and 159 of the PA 2008 includes any existing interest in or right over land, the former BRBR rights over land at Marriott's Way have become Crown land, for the purposes of section 135 of the PA 2008. The Highways Agency is authorised to grant consent to the inclusion of Crown land in the DCO on the basis prescribed by section 135 of the PA 2008 and accordingly NCC is in the process of seeking the Highways Agency's consent to the inclusion in the DCO of the Crown's interests in the land at Marriott's Way.

12.1.8 Plot 12/55 is made up of part of the A1042 Yarmouth Road and its verge on the northern side. Norfolk County Council is the highway authority in respect of this section of highway – it was formerly part of a trunk road (the previous route of the A47(T)), for which the Secretary of State for Transport was the highway authority. NCC became the highway authority following the construction of the new (as is now in place) A47(T), and by virtue of The A47 Leicester-Great Yarmouth Trunk Road (Easton-Poswick), A11 London-Norwich Trunk Road (Cringleford-Mile End Road), A140 Ipswich-Norwich Trunk Road (South of Norwich Road-Daniels Road) (Norwich Southern

Bypass) Detrunking Order 1989 (SI 1989/2264). The registered owner of plot 12/55 is a non-Crown person, but the registered title includes reference to a Shortened Procedure Agreement (SPA) involving the (then) Minister of Transport. The Minister (part of the Crown) was the beneficiary of the dedication for highway purposes of the SPA land. The land remains used for that dedicated highway purpose, albeit the highway is of a different status through detrunking (with NCC as highway authority). NCC is continuing to investigate the complex historical title position in relation to plot 12/55 and to seek any necessary consent from the Highways Agency to the inclusion of the land in the DCO. Given the continuing investigation it has included it as land in which there is a Crown interest, and considers that such interest is currently most likely to be owned by NCC.

12.2 Discharge Consents

12.2.1 Consent for discharge of water to the aquifer may be required under the Environmental Permitting (England and Wales) Regulations 2010¹².

12.2.2 Piling work will take place at bridge locations and the piles may penetrate the water table. If so, some water may have to be pumped out and placed back in the aquifer. Before it is returned to the aquifer it would be treated in a settlement system.

12.2.3 Any discharge consents will be sought from the Environment Agency prior to any such works being carried out. The potential requirement to obtain discharge consents is a relatively standard implementation matter regularly addressed for schemes such as the NDR.

12.3 Protected Species Licences

12.3.1 Protected Species Licences will be required under The Conservation of Habitats and Species Regulations 2010¹³.

12.3.2 A breeding pond and an associated area of terrestrial habitat for great crested newts is being removed as part of the construction works. This pond is one of a series and the other ponds in the series are not being removed. Four new ponds are being created in the immediate vicinity and areas of remaining terrestrial habitat will be maintained along with the new ponds. Newt fencing will be erected before construction works begin and trapping and relocation of newts will be carried out.

12.3.3 The construction works will result in the removal of a number of bat roosts in buildings and in trees. The NDR will intersect flight paths and other features of bat activity. New roosts will be provided (two bat houses and a number of bat boxes). Severance of significant flight paths will be addressed by the installation of crossing points of various types, such as bat gantries, green bridges, underpasses and modified highway bridges to provide dark corridors.

12.3.4 Protected species licenses will be sought from Natural England following the making of the development consent order that is being sought. Mitigation measures have been discussed with the Natural England case officer during the consultation that has been on-going throughout the design and evolution of the Scheme. Draft licence applications were submitted to Natural England in November 2013, with a view to a letter of comfort being obtained confirming that Natural England consider that it is likely that it would be in a position to grant licences when formally sought.

12.4 Land Drainage Consent

12.4.1 Consent to obstruct watercourses may be sought from the relevant local drainage board under section 23 of the Land Drainage Act 1991¹⁴.

12.4.2 Any necessary consent will be sought from the Broads Internal Drainage Board. Discussions regarding this and other relevant matters have already taken place with the Environment Agency and the Internal Drainage Board.

12.5 Noise controls

12.5.1 Prior consent for works on construction sites may be sought from the relevant local authority under section 61 of the Control of Pollution Act 1974¹⁵.

12.5.2 Certain construction activities will be noisy and although measures will be put in place to reduce noise and its effects there may be some disturbance.

12.5.3 Any such consents will be sought from the relevant local authority by the contractor. The potential requirement to obtain such consents is a relatively standard implementation matter regularly addressed for schemes such as the NDR.

12.6 Traffic controls

12.6.1 The draft DCO provides powers for specific temporary restrictions as well as general powers for NCC to control traffic for the purposes of the construction of the NDR. In the event that any temporary or permanent traffic controls are required that are outside the scope of the DCO then they would be applied for by the contractor / NCC at the appropriate time.

13.0 Human Rights

13.1 The Human Rights Act 1998

13.1.1 The Human Rights Act 1998¹⁶ incorporated into UK law the European Convention on Human Rights ("the Convention"). The Convention includes provisions in the form of Articles, the aim of which is to protect the rights of the individual.

13.1.2 The following Articles of the Convention are relevant to the Secretary of State's decision as to whether the DCO should be made so as to include powers of compulsory acquisition:

- Article 6 entitles those affected by the powers sought in a DCO to a fair and public hearing by an independent and impartial tribunal.
- Article 8 protects the right of the individual to respect for his or her private and family life, home and correspondence. A public authority cannot interfere with these interests unless such interference is in accordance with the law and is necessary in the interests of, amongst other things, national security, public safety or the economic well-being of the country.
- Article 1 of the First Protocol protects the right of everyone to peaceful enjoyment of possessions. No one can be deprived of their possessions except in the public interest and subject to the relevant national and international laws. As with Article 8, any interference with possessions must be proportionate and, in determining whether a particular measure is proportionate, a fair balance must be struck between the public benefit sought and the interference with the rights in question.

13.1.3 The DCO has the potential to infringe the human rights of persons who own property or have rights in the land proposed to be acquired pursuant to the DCO. Such infringement can be authorised by law provided that:

- the statutory procedures for obtaining the DCO are followed and there is a compelling case in the public interest for the inclusion of powers of compulsory acquisition in the DCO; and
- any interference with the Convention right is proportionate to the legitimate aim served.

13.2 Compliance with the Convention and the Human Rights Act 1998

- 13.2.1 NCC has considered the potential infringement of Convention rights in consequence of the exercise of the compulsory acquisition powers included within the DCO. The land to be acquired for the NDR Scheme has been kept to the minimum necessary to enable proper delivery of the Scheme, and the NDR Scheme is designed to minimise interference with the peaceful enjoyment of a person's possessions under Article 1 of the First Protocol of the Convention.
- 13.2.2 NCC considers that there would be very significant public benefit arising from the grant of development consent for the NDR Scheme. That benefit can only be realised if the development consent is accompanied by the grant of powers of compulsory acquisition. The public interest can only be safeguarded by the acquisition of this land and such acquisition would not place a disproportionate burden on the affected land owners.
- 13.2.3 The significant public benefits of the NDR Scheme outweigh the effects of the DCO upon persons with property rights in the land and would not be a disproportionate interference with their rights under Article 8 and Article 1 of the First Protocol. In addition, those affected by compulsory acquisition powers will be entitled to compensation.
- 13.2.4 In relation to Article 6, there will have been an opportunity for members of the public to make representations on the Application. In accordance with Part 5 of the PA 2008, NCC consulted the persons prescribed in section 44 of the PA 2008. This included known owners and occupiers of the land to be acquired pursuant to the DCO, those with rights in the land to be acquired pursuant to the DCO and those who might make claims either under section 10 of the Compulsory Purchase Act 1965 in respect of injurious affection, or under Part 1 of the Land Compensation Act 1973. Those with the benefit of restrictive covenants, easements and other rights overridden by the exercise of powers in the DCO would be entitled to make claims under section 10 of the Compulsory Purchase Act 1965.
- 13.2.5 Furthermore, representations/objections to the Application can be made in response to any notice given under section 56 of the PA 2008, for consideration at the examination of the Application by the examining authority, and in any written representations procedure which the Examining Authority decides to hold, or at any compulsory acquisition hearing held under section 92 of the PA 2008.

- 13.2.6 Should the DCO be made, and be published as made, a 6 week period within which a claim for judicial review to the High Court, questioning the order or its decision or proceedings, will be afforded pursuant to section 118 of the PA 2008.
- 13.2.7 In relation to matters of compensation for land to be acquired, affected persons have the right to apply to the Upper Tribunal (Lands Chamber), an independent tribunal, in the case of any dispute on the value of land to be acquired pursuant to the DCO.
- 13.2.8 For the above reasons, any infringement of the Convention rights of those whose interests are affected by the inclusion in the DCO of powers of compulsory acquisition, is proportionate and legitimate and is in accordance with national and European law. For the reasons set out in Section 8.0 of this Statement, NCC believes that there is a compelling case in the public interest for the exercise of such powers of compulsory acquisition. NCC considers that it would, therefore, be appropriate and proportionate for the Secretary of State to make the DCO, including the grant of compulsory acquisition powers.

14.0 Glossary

Term	Meaning/Definition
The APFP Regulations	<i>The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2009 (SI 2009/2264)</i>
The Application	<i>The Application for the DCO for the NDR Scheme</i>
Compulsory acquisition powers	<i>Powers to authorise the compulsory acquisition of land and of new or existing rights over land (set out in the Planning Act 2008 sections 122-126 and other sections) and additional powers to create new rights over or in land, to extinguish private rights, to exercise rights in relation to streets, to make temporary use of land for construction and maintenance, and to permanently and temporarily alter the layout of streets or stop up streets and private accesses.</i>
The Convention	<i>The European Convention on Human Rights</i>
DCO	<i>'The Norfolk County Council (Norwich Northern Distributor Road (A1067 to A47(T))) Order', being a Development Consent Order required for the NDR Scheme (pursuant to the Planning Act 2008, Part 4)</i>
ES	<i>The Environmental Statement produced in connection with the NDR Scheme</i>
First Protocol	<i>The First Protocol of the Convention</i>

<i>The Guidance</i>	<i>The Department for Communities and Local Government guidance, 'Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land', September 2013</i>

Appendix 1

Details of the purpose in seeking acquisition powers

Appendix 1: Details of the purpose in seeking acquisition powers

1. The specific purposes for which each plot of land subject to compulsory purchase powers is required are set out in Tables 1, 2 and 3 below. The first column of these tables uses the plot numbers shown in the Book of Reference (Application Document Reference 4.3) and on the Land Plans (Application Document Reference 2.2). The second column of the tables refers to the works as described in Schedule 1 of the DCO (Application Document Reference 3.1) and as shown on the Works Plans (Application Document Reference 2.3). Tables 1, 1A, 2, 2A, 3 and 3A below should therefore be read in conjunction with and by reference to those documents.
2. Tables 1 and 1A detail the land that is to be acquired freehold by the Applicant. This land is within the DCO boundary shown on the Works Plans. The purpose of acquiring the land referred to in Table 1 is to enable the Applicant to construct on that land the permanent works, described in Schedule 1 of the DCO. The two tables list the same plot numbers: Table 1 lists them by Work Number and Table 1A by the use to which they will be put. The terms used in the second column of Table 1A are explained at the end of Table 1A.
3. Tables 2 and 2A list the land over which specific permanent new rights are to be acquired by the Applicant. These rights are necessary for the purpose of constructing the works, carrying out maintenance thereafter or to protect the works. The Applicant has decided that, for the Scheme, it is not necessary to acquire the land outright. The two tables list the same plot numbers: Table 2 lists them by Work Number and Table 2A by the use to which they will be put.
4. Tables 3 and 3A set out the land which the Applicant only requires temporary possession of for the purpose of constructing the Scheme. Uses include temporary areas for highway diversions, site compounds, storage areas and land for utility diversion works. The two tables list the same plot numbers: Table 3 lists them by Work Number and Table 3A by the use to which they will be put.

TABLE 1

Acquisition of Land	
No on Land Plans	Purpose for which land is required
1/1, 1/2, 1/3, 1/4, 1/5, 1/6, 1/7(part), 1/8(part) and 1/10(part)	Work No.1
1/7(part), 1/8(part), 1/9, 1/10(part), 1/12, 1/13, 1/14, 1/16, 1/17, 1/18, 1/20, 1/21, 1/22, 1/23, 1/24, 1/25, 2/1, 2/2, 2/5(part), 2/7, 2/9, 2/11 and 2/13(part)	Work No.2
2/5(part), 2/13(part), 2/14, 2/15, 2/16, 2/17, 2/18, 2/19(part), 2/20(part) and 2/21	Work No.3
2/19(part), 2/20(part), 2/22, 2/23, 2/24, 2/25, 2/27, 2/30, 2/31, 2/32, 2/33, 2/34, 2/36, 2/37, 2/38, 2/39, 2/40, 2/41, 2/42, 3/1(part) and 3/3	Work No.4
3/1(part), 3/5, 3/6, 3/7, 3/8, 3/9, 3/10(part), 3/12(part), 3/13(part), 3/14(part) and 3/15	Work No.5
3/10(part), 3/11, 3/12(part), 3/13(part), 3/14(part), 3/16, 3/17, 3/18, 3/19, 3/20, 3/21, 3/22, 3/23, 3/24, 3/25, 3/26, 3/27, 3/28, 3/29, 3/30, 3/31, 3/32, 3/34, 3/35, 4/1, 4/2, 4/3, 4/4 and 4/5(part)	Work No.6
4/5(part), 4/6, 4/7, 4/8, 4/10, 4/12, 4/13, 4/14, 4/15, 4/16, 4/17, 4/18, 4/19, 4/20, 4/21, 4/22, 4/23(part), 4/25, 4/26, 4/27, 4/28, 4/29, 4/30, 4/31, 4/32, 4/33, 4/34, 4/35 and 4/36	Work No.7
4/23(part), 4/37 and 4/38	Work No.8
5/1, 5/3, 5/4, 5/5, 5/6, 5/7, 5/8, 5/9, 5/10, 5/11, 5/12, 5/13, 5/14, 5/15, 5/16, 5/17, 5/18, 5/19, 5/20, 5/21, 5/22, 5/23, 5/24, 5/25, 5/26, 5/27, 5/28, 5/29, 5/30, 5/31, 5/32, 5/35, 5/36, 5/37, 5/38, 5/39, 5/40, 5/41, 5/42 and 5/44(part)	Work No.9

5/44(part), 5/45, 5/46, 5/47, 5/48, 5/49, 6/1, 6/2, 6/3, 6/4, 6/5, 6/6, 6/7, 6/8(part) and 6/11(part)	Work No.10
6/8(part), 6/9, 6/10, 6/11(part), 6/12, 6/13 and 6/15(part)	Work No.11
6/15(part), 6/17, 6/18, 6/19, 6/20, 6/21, 7/1, 7/2, 7/3, 7/4, 7/5, 7/6, 7/7, 7/8, 7/9, 7/10, 7/11, 7/12, 7/13, 7/14, 7/15, 7/16, 7/18, 7/19, 7/20, 7/21, 7/22, 7/23, 7/24, 7/25, 7/26, 7/27, 7/28, 7/29, 7/30, 7/31, 7/32 and 8/1(part)	Work No.12
8/1(part), 8/2, 8/3, 8/4, 8/5, 8/6, 8/8, 8/9 and 8/10(part)	Work No.13
8/10(part), 8/11, 8/12, 8/13, 8/14, 9/1, 9/2, 9/3, 9/4, 9/6(part), 9/7(part) and 9/8(part)	Work No.14
9/6(part), 9/7(part), 9/8(part), 9/9, 9/10, 9/11, 9/12, 9/13, 9/14, 9/15, 9/16, 9/17, 9/18, 9/19, 9/20, 9/21(part), 9/22(part), 9/23(part), 9/24 and 9/25	Work No.15
9/21(part), 9/22(part), 9/23(part), 9/26, 9/27, 9/28, 9/29, 9/30, 9/31, 9/32, 9/33, 9/34, 9/35, 9/36, 9/37, 9/39, 10/1, 10/2, 10/3, 10/4, 10/5, 10/6, 10/8, 10/9, 10/10, 10/11, 10/12, 10/13, 10/14, 10/15, 10/16, 10/17, 10/18, 10/19, 10/20, 10/21, 10/22, 10/23, 10/24 and 10/27(part)	Work No.16
10/27(part), 10/29, 10/30, 10/31, 10/32, 10/33, 10/34, 10/35(part) and 10/36(part)	Work No.17
10/35(part), 10/36(part), 10/37(part), 10/41, 10/42, 10/43(part), 10/44(part), 10/45, 10/46, 10/47, 10/48, 10/49, 10/50, 10/51, 10/53, 11/1, 11/2, 11/3, 11/4, 11/5, 11/6 and 11/8(part)	Work No.18

10/37(part), 10/43(part) and 10/44(part)	Work No.19
11/8(part), 11/9, 11/10, 11/11, 11/12, 11/14, 11/15, 11/16, 11/17, 11/18, 11/19, 11/20, 11/21, 11/22, 11/23, 12/1, 12/2, 12/3, 12/4, 12/5, 12/6, 12/7, 12/8(part) and 12/10	Work No.20
12/8(part), 12/11, 12/12, 12/13, 12/14, 12/15, 12/16, 12/17, 12/18, 12/19, 12/20, 12/21, 12/22, 12/23, 12/24, 12/25, 12/26, 12/27, 12/28, 12/29, 12/30, 12/31, 12/32, 12/33, 12/34, 12/35, 12/36, 12/37, 12/38, 12/39, 12/40, 12/43, 12/44, 12/45, 12/46, 12/47, 12/48, 12/49, 12/50, 12/51, 12/52, 12/53, 12/54, 12/55, 12/56, 12/57, 12/58, 12/59 and 12/60	Work No.21
9/40, 9/41 and 9/42	Work No.22
11/24, 11/25 and 11/26	Work No.23
8/15	Work No.24

TABLE 1A

Acquisition of Land	
No on Land Plans	Purpose for which land is required
1/13, 1/17, 1/23, 2/1, 2/9, 2/27, 2/36, 3/16, 3/19, 3/23, 5/11, 5/19, 5/42, 5/44, 5/46, 5/47, 6/20, 7/9, 9/30, 10/1, 10/4, 10/6 and 10/21	Required for NDR alignment
1/24, 1/25, 2/2, 2/22, 3/9, 3/13, 3/22, 3/26, 3/27, 3/28, 3/34, 4/1, 4/4, 4/23, 4/37, 4/38, 5/13, 5/16, 5/29, 5/40, 5/41, 5/48, 6/1, 6/3, 6/4, 6/5, 6/6, 6/11, 6/15, 7/3, 7/12, 7/16, 7/31, 8/1, 8/10, 9/6, 9/36, 9/37, 10/23, 10/37, 10/44, 11/18, 11/20, 11/22 and 12/1	Required for a) NDR alignment b) Mitigation / landscaping works
1/21	Required for

	<ul style="list-style-type: none"> a) NDR alignment b) Mitigation / landscaping works c) Provision of New Private Means of Access
5/7	Required for <ul style="list-style-type: none"> a) NDR alignment b) Drainage Lagoon
2/15, 3/6, 5/9, 6/19, 7/24, 8/5, 9/13 and 10/32	Required for re-use of existing public highway for NDR alignment
1/8, 2/20, 2/24, 2/41, 3/1, 3/8, 5/1, 9/10, 10/51, 11/19, 12/8 and 12/51	Required for: <ul style="list-style-type: none"> a) NDR alignment b) New highway (Non - NDR)
11/1 and 11/8	Required for <ul style="list-style-type: none"> a) NDR alignment b) New highway (Non - NDR) c) Mitigation / landscaping works d) Drainage Lagoon
2/5, 3/25, 3/32, 4/5, 9/23, 10/27, 10/35 and 11/11	Required for <ul style="list-style-type: none"> a) NDR alignment b) New highway (Non - NDR) c) Mitigation / landscaping works
6/12, 10/16 and 10/19	Required for <ul style="list-style-type: none"> a) NDR alignment b) New highway (Non - NDR) c) Mitigation / landscaping works d) Provision of New Private Means of Access
4/13, 5/6, 5/12, 5/14, 5/15, 6/8, 7/4, 7/28, 8/3, 8/8, 9/12, 10/47, 11/10, 11/15 and 12/5	Required for re-use of existing public highway for <ul style="list-style-type: none"> a) NDR alignment b) Non-NDR alignment
12/13 and 12/15	Required for A47(T) alignment
12/19, 12/20, 12/21, 12/22, 12/23, 12/24, 12/26, 12/27, 12/38, 12/39, 12/40, 12/44, 12/45, 12/46 and 12/47	Required for re-use of existing public highway for Trunk Road
1/3, 2/17, 2/18, 2/21, 2/33, 3/30, 4/7,	Required for new highway (Non – NDR)

4/10, 4/12, 4/15, 4/16, 4/18, 4/20, 4/21, 4/22, 4/27, 4/29, 4/31, 4/34, 4/35, 4/36, 5/4, 5/21, 5/23, 5/25, 5/27, 5/36, 7/11, 7/14, 7/18, 7/20, 7/22, 8/9, 9/15, 9/16, 9/20, 9/24, 9/25, 10/12, 10/13, 10/14, 10/15, 10/29, 10/34, 10/48, 10/49, 10/53, 11/2, 11/16, 12/3, 12/7, 12/32 and 12/54	
5/38, 9/7 and 12/34	Required for a) New highway (Non-NDR) b) Mitigation / landscaping works
3/14	Required for a) New highway (Non - NDR) b) Drainage Lagoon
1/1, 1/2, 1/4, 1/5, 1/6, 2/14, 2/16, 2/31, 2/32, 2/39, 2/40, 3/5, 3/7, 3/35, 4/6, 4/8, 4/14, 4/17, 4/30, 4/32, 4/33, 5/3, 5/8, 5/26, 5/28, 5/30, 5/32, 5/35, 5/37, 5/39, 6/7, 6/9, 7/5, 7/6, 7/19, 7/21, 7/23, 7/25, 7/27, 7/29, 8/2, 8/4, 8/6, 9/11, 9/14, 9/17, 9/18, 10/31, 10/33, 10/46, 11/14, 11/17, 12/4, 12/6, 12/31, 12/33, 12/36, 12/37, 12/43, 12/48, 12/49, 12/53, 12/55, 12/56, 12/57, 12/58, 12/59 and 12/60	Required for re-use of existing public highway for Non – NDR alignment
1/7, 1/20, 2/7, 2/11, 2/19, 2/38, 3/12, 3/17, 3/18, 3/21, 3/29, 4/25, 4/28, 5/31, 5/45, 5/49, 6/2, 6/18, 7/2, 7/7, 7/8, 7/13, 7/15, 8/11, 8/14, 9/2, 9/4, 9/8, 9/9, 9/19, 9/21, 9/31, 9/32, 9/33, 9/34, 9/35, 9/39, 10/2, 10/3, 10/8, 10/20, 10/22, 10/24, 10/43, 11/4, 11/6, 12/11, 12/25, 12/28, 12/29, 12/35 and 12/50	Required for mitigation / landscaping works
1/9, 1/10, 1/12, 1/14, 1/16, 1/18, 2/13, 3/3, 4/2, 4/3, 4/19, 4/26, 5/5, 5/10, 5/17, 5/18, 5/20, 5/22, 5/24, 6/10, 6/17, 6/21, 7/1, 7/10, 7/30, 7/32, 8/12, 8/13, 9/1, 9/3, 9/22, 9/28, 9/29, 10/36, 10/50, 11/3, 11/5, 11/12, 11/21, 11/23, 12/2, 12/10, 12/12, 12/14, 12/16 and 12/52	Required for new drainage lagoon
3/10, 3/11, 3/20, 3/24 and 3/31	Required for improvements to Restricted

	By-way surface
1/22, 2/30, 2/42, 3/15, 6/13, 7/26, 9/26, 9/27, 10/5, 10/9, 10/10, 10/11, 10/17, 10/18, 10/30, 10/45, 12/17, 12/18 and 12/30	Required for provision of new Private Means of Access
2/23, 2/25, 2/34, 2/37, 10/41 and 10/42	Required as replacement land
9/40, 9/41 and 9/42	Required for the Wroxham Road / Green Lane West Junction Improvement
11/24, 11/25 and 11/26	Required for the Thorpe End (Highway Improvement Measures)
8/15	Required for the Rackheath Lane Closure

In Table 1A above:

- **“NDR Alignment”** means the NDR Classified Road carriageway and integral embankments and cuttings.
- **“Mitigation / Landscaping”** means areas of earth bunds and areas of existing woodland or woodland, grassland and scrubland creation.
- **“New highway (Non - NDR)”** means areas of new carriageway that do not form part of either the NDR Alignment or A47(T) Alignment. For example this includes improvements to side roads connecting into the NDR Alignment such as Fir Covert Road and Drayton Lane. It also includes the lengths of the A140 Cromer Road and the A1067 Fakenham Road which are being improved. The areas also include proposed new bridleways, cycle tracks, footways/cycleways and turning heads.
- **“Drainage Lagoon”** means areas included within the proposed new lagoons.
- **“Provision of new Private Means of Access”** means lengths of track being provided to give access to third party land.
- **“Re-use of existing public highway for NDR alignment”** means areas of existing public highway land, which will remain as public highway, but which will become part of the NDR Alignment.
- **“Required for A47(T) Alignment”** means the areas of land required for the new A47 Trunk Road Postwick Junction Slip Roads.

- **“Required as replacement land”** means the areas identified as replacement for the Special Category Land.
- **“Re-use of existing public highway for Trunk Road”** means areas of existing public highway land, which will remain as public highway, but which will become part of the A47(T) Alignment.
- **“Re-use of existing public highway for Non – NDR Alignment”** means areas of existing public highway land, which will remain as public highway, but will not be part of either the NDR Alignment or the A47(T) Alignment.
- **“Required for improvements to Restricted By-way surface”** means the lengths of existing Restricted By-ways, which will remain as such, but upon which the Applicant intends to carry out improvement works.

TABLE 2

Acquisition of Rights	
No on Land Plans	Purpose for which land is required
2/26, 2/28 and 2/29	Work No.4
9/5	Work No.14
10/40	Work No.19
12/41 and 12/42	Work No.21

TABLE 2A

Acquisition of Rights	
No on Land Plans	Purpose for which land is required
2/26, 2/28 and 2/29	Required for the connection of Marriott's Way with Marriott's Way Overbridge
9/5	Required for drainage rights
10/40	Required for the NDR Bridge (Over Railway Line)
12/41 and 12/42	Required for the existing Postwick Bridge and the New Postwick Bridge across the Norwich Southern Bypass (A47 Trunk Road)

TABLE 3

Temporary Possession of Land – By Work Number	
1/11, 1/15 and 1/19	Work No.1
2/3, 2/4, 2/6, 2/8, 2/10 and 2/12	Work No.2
2/35 and 3/2	Work No.4
3/4	Work No.5
3/33, 4/9(part) and 4/11(part)	Work No.6
4/9(part), 4/11(part) and 4/24	Work No.7
4/39,5/2, 5/33, 5/34 and 5/43(part)	Work No.9
5/43(part)	Work No.10
6/14, 6/16, 7/17 and 7/33	Work No.12
8/7	Work No.13
9/38, 10/7, 10/25, 10/26(part) and 10/28(part)	Work No.16
10/26(part) and 10/28(part)	Work No.17
10/38, 10/39, 10/52 and 11/7	Work No.18
11/13 and 12/9	Work No.20
12/61	Work No.21

TABLE 3A

Temporary Possession of Land – By Use	
2/35, 7/33(part) and 11/13(part)	Required for bridge compound
9/38	Required for ecological mitigation measures
2/3, 2/4, 2/6, 2/8 and 2/10	Required for a working space area for the Gas Main diversion

6/16	Required for removal of existing hedgerow and Airport fencing
5/43(part)	Required for main site compound , temporary storage, plant yard, crushing plant and recycling plant
3/33	Required for site compound
4/9(part), 4/11 and 10/7	Required for site compound with temporary mitigation measures
10/38 and 10/39(part)	Required for site compound with batching plant, bridge access and access to railway bridge north abutment with temporary mitigation measures
12/61	Required for Postwick site compound with temporary mitigation measures
2/12, 3/2, 4/9(part), 4/39, 5/2, 5/43(part), 6/14, 7/17, 7/33(part), 10/25, 10/26, 10/28, 10/39(part), 10/52, 11/7, 11/13(part) and 12/9	Required for temporary topsoil storage
1/11, 1/15, 1/19, 3/4, 5/33, 5/34 and 8/7	Required for temporary traffic diversion to complete tie-in
4/24	Required for temporary traffic management

Appendix 2

Negotiations with owners of interests in land and other information relating to land interests

1. Part 1: Overview

- 1.1 This Appendix provides a summary of the current position in the Applicant's negotiations with each of the affected land owners.
- 1.2 Although negotiations are ongoing with all persons with an interest in land affected by the Scheme, the Applicant has concluded that acquisition by agreement will not occur in all cases or within the necessary timescales to ensure that the programme for the construction of the Scheme is met. There are also some areas of the Land where it will not be possible to acquire the interest except by way of compulsory acquisition powers, for example where, despite diligent enquiry, it has not been possible to identify the owner of an interest in land.
- 1.3 The properties already acquired by the Applicant, and referred to below in paragraph 21 of Part 2 of this Appendix, are included within the DCO and the other Application documents as being required for compulsory acquisition to ensure that no known or unknown rights exist over such land that could impede the proper implementation of the Scheme.
- 1.4 The plots listed in paragraph 1.5 below cover areas of existing public highway land occupied by the Applicant in its capacity as local highway authority. These plots are either owned by the Applicant, owned by named or unknown parties or are presumed half-width sub-soil ownership by adjoining owners. All these areas will remain as public highway and are included within the DCO Application documents to ensure that any third party interests are acquired. To reduce duplication of entries within this Appendix these plots have been excluded from the Landowner Interest details given in Part 2 of this Appendix.
- 1.5 The existing highway land plots are: 1/1, 1/2, 1/4, 1/5, 1/6, 1/22, 2/14, 2/15, 2/16, 2/31, 2/32, 2/39, 2/40, 3/5, 3/6, 3/7, 3/9, 3/10, 3/20, 3/31, 3/35, 4/6, 4/8, 4/13, 4/14, 4/17, 4/30, 4/32, 4/33, 5/3, 5/6, 5/8, 5/9, 5/10, 5/11, 5/12, 5/14, 5/15, 5/20, 5/26, 5/28, 5/29, 5/30, 5/31, 5/32, 5/34, 5/35, 5/37, 5/39, 6/7, 6/8, 6/9, 6/19, 7/4, 7/5, 7/6, 7/19, 7/21, 7/23, 7/24, 7/25, 7/27, 7/28, 7/29, 8/2, 8/3, 8/4, 8/5, 8/6, 8/8, 8/15, 9/11, 9/12, 9/13, 9/14, 9/17, 9/18, 9/40, 9/41, 10/31, 10/32, 10/33, 10/46, 10/47, 11/10, 11/14, 11/15, 11/17, 11/24, 11/25, 11/26, 12/4, 12/5, 12/6, 12/31, 12/32, 12/33, 12/35, 12/43, 12/48, 12/49, 12/53, 12/55, 12/56, 12/57, 12/58, 12/59 and 12/60.
- 1.6 In addition to the owners, lessees, tenants and occupiers mentioned in Part 2 below, other parties such as mortgage companies, statutory undertakers with apparatus such as pipelines across the land, and those with known rights, whilst included in the consultation, have not been detailed in this Appendix. They are, however, identified in the Book of Reference.

- 1.7 The Applicant remains open to acquiring the required interests in the land by agreement and negotiations with this objective are ongoing.

Part 2: Landowner Interest Details

1. Plot 1/3

- 1.1 Comprises agricultural land to the north of the A1067 Fakenham Road.
- 1.2 The land is owned by Mr G Black, Mrs I E Black and the Denton & Co Trustees Ltd. The land is leased and occupied by Ebony Holdings Limited.
- 1.3 The land is required for the Scheme to be developed as part of the A1067 Fakenham Road improvement.
- 1.4 The existing field access points will remain off the A1067 Fakenham Road.
- 1.5 The owners have appointed a surveyor to act on their behalf and negotiations have commenced regarding the acquisition of the required land.

2. Plot 1/7

- 2.1 Comprises agricultural land to the north of the A1067 Fakenham Road.
- 2.2 The land is owned by Mr C Bunn and Mrs J L Bunn. Mr M Copplestone and Mr I Copplestone have ownership responsibility in respect of the north-west boundary hedge. There are no known tenants.
- 2.3 The land is required for the Scheme for the provision of land for environmental mitigation measures. Part will also be used during the works for temporary topsoil storage.
- 2.4 Both owners have appointed surveyors to act on their behalf and negotiations have commenced regarding the acquisition of the required land.

3. Plots 1/8, 1/9, 1/10 and 1/11

- 3.1 Comprises agricultural land to the north of the A1067 Fakenham Road.
- 3.2 The land is owned by Mr C Bunn and Mrs J L Bunn. There are no known tenants.
- 3.3 The land is required for the Scheme to be developed as part of both the A1067 Fakenham Road improvement and the new NDR highway alignment. This will also include the provision of land for the construction of new drainage lagoons and environmental mitigation measures. Land is also required temporarily to facilitate construction activities.

3.4 The owners have appointed a surveyor to act on their behalf and negotiations have commenced regarding the acquisition of the required land.

4. Plots 1/12, 1/13, 1/14 and 1/15

4.1 Comprises part of a private access track leading north from the A1067 Fakenham Road.

4.2 The land is owned by Mr M Copplestone and Mr I Copplestone. It is subject to rights of access in favour of neighbouring owners and occupiers.

4.3 The land is required for the Scheme to be developed as part of the new NDR highway alignment and the construction of new drainage lagoons. This will also include provision of temporary land to facilitate construction activities

4.4 Both the owner and access right holders have appointed surveyors to act on their behalf and negotiations are ongoing with regard to acquiring their interests.

5. Plots 1/16, 1/17, 1/18, 1/19, 1/20 and 1/24

5.1 Comprises agricultural land north of the A1067 Fakenham Road and west of 'Peacehaven'.

5.2 The land is owned by Mr M A Savage and Mrs J A Savage. There are no known tenants.

5.3 The land is required for the Scheme to be developed as part of the new NDR highway alignment. This will also include the provision of land for the construction of new drainage lagoons and environmental mitigation measures. Land is also required temporarily to facilitate construction activities.

5.4 The owners have appointed a surveyor to act on their behalf and negotiations have commenced regarding the acquisition of the required land.

6. Plot 1/21

6.1 Comprises part of the combined private access track and public highway known as Attlebridge Restricted Byway No 3.

6.2 The land is owned by Mr M B Reynolds and Mrs L-J Reynolds. There are no known tenants. It is used as the access driveway to The Lodge and the Mid Norfolk Shooting School.

6.3 The land is required for the Scheme to be developed as part of the new NDR highway alignment.

- 6.4 Access to the owner's retained land to the north, The Lodge and Mid - Norfolk Shooting School, will be re-provided by a new Private Means of Access.
- 6.5 The owners have not appointed a surveyor but discussions have been held with the landowners regarding the acquisition of their interests.
- 7. Plots 1/23 and 2/1**
- 7.1 Comprises part of the combined private access track and public highway known as Attlebridge Restricted Byway No 3 and part of the grounds to the residential property known as Deighton Hills.
- 7.2 The land is owned by Mr D G Lord and Mrs P A Lord. There are no known tenants.
- 7.3 The land is required for the Scheme to be developed as part of the new NDR highway alignment. This will also include provision of land for environmental mitigation measures.
- 7.4 Access to the owner's retained land to the north, Deighton Hills, will be re-provided by a new Private Means of Access.
- 7.5 The owners have appointed a surveyor to act on their behalf and negotiations have commenced regarding the acquisition of the required land.
- 8. Plots 1/25, 2/2, 2/3 and 2/4**
- 8.1 Comprises agricultural land north of the A1067 Fakenham Road.
- 8.2 The land is owned by Mr J P Ketteringham. It is occupied by Paul Gunther Contracting Limited.
- 8.3 The land is required for the Scheme to be developed as part of the new NDR highway alignment. This will also include provision of land for environmental mitigation measures and the provision of temporary land to facilitate construction activities related to the diversion of the National Grid gas transmission pipeline.
- 8.4 Access to the landowner's retained land to the north, after its temporary use, will be provided by a new Private Means of Access.
- 8.5 Both the owner and occupier have appointed surveyors to act on their behalf. Negotiations are ongoing with regard to acquiring their respective interests.
- 9. Plots 2/5, 2/6, 2/7, 2/10, 2/11, 2/12 and 2/13**
- 9.1 Comprises agricultural land to the west of Fir Covert Road, forming part of Spring Farm.

-
- 9.2 The land is owned and occupied by Mr O W Arnold and Mrs H R Arnold.
- 9.3 The land is required for the Scheme to be developed as part of the new NDR highway alignment, extension of bridleway facilities on the C262 Fir Covert Road and construction of a new drainage lagoon. It will also include provision of land for environmental mitigation measures and the provision of temporary land to facilitate construction activities related to the diversion of the National Grid gas transmission pipeline.
- 9.4 Access to the owners' severed land to the south of the road will be provided by a new Private Means of Access.
- 9.5 The owners have appointed a surveyor to act on their behalf and negotiations are ongoing regarding the acquisition of the required land.
- 10. Plots 2/8 and 2/9**
- 10.1 Comprises part of the grounds to the residential property known as Heathwood.
- 10.2 The land is owned and occupied by Mr N H Brummage.
- 10.3 The land is required for the Scheme to be developed as part of the new NDR highway alignment. This will also include the provision of temporary land to facilitate construction activities related to the diversion of the National Grid gas transmission pipeline.
- 10.4 The owner has appointed a surveyor to act on his behalf and negotiations are ongoing regarding the acquisition of the required land.
- 11. Plot 2/17**
- 11.1 Comprises amenity land adjoining the C262 Fir Covert Road
- 11.2 Ownership is uncertain despite diligent enquiry but potential owners are believed to be Mr P Gunther and Mrs L Gunther.
- 11.3 The land is required for the Scheme to be developed as part of the extension of bridleway facilities on the C262 Fir Covert Road.
- 11.4 With uncertainty over ownership investigations are ongoing to resolve matters before negotiations commence.
- 12. Plot 2/18**
- 12.1 Comprises part of the grounds to the residential property known as Chestnut House, located on the C262 Fir Covert Road.
- 12.2 The land is owned and occupied by Mr S Robertson and Mrs E Robertson.

-
- 12.3 The land is required for the Scheme to be developed as part of the extension of bridleway facilities on the C262 Fir Covert Road.
- 12.4 A meeting has been held with the owners to discuss the implications of the Scheme on their property. They have now appointed a surveyor to act on their behalf.
- 13. Plots 2/19, 2/20, 2/30, 2/41, 2/42, 3/1, 3/2, 3/3 and 3/4**
- 13.1 Comprises two areas of agricultural land situated between C262 Fir Covert Road and C261 Reepham Road, separated by Breck Farm Lane and Furze Lane (U57168) and the Marriott's Way.
- 13.2 The land is owned by Mr D Acloque and Mr W D Barr, as Trustees of the Gurloque Settlement, who also occupy the land.
- 13.3 The land is required for the Scheme to be developed as part of the new NDR highway alignment. This will also include land for improvements to the C262 Fir Covert Road and C261 Reepham Road, the construction of a new drainage lagoon and the provision of land for environmental mitigation measures. Temporary land is also needed to facilitate construction activities.
- 13.4 Access to the owners' retained land either side of the new road will be re-provided by new Private Means of Accesses.
- 13.5 The owners have appointed a surveyor to act on their behalf and negotiations have been ongoing for many years regarding the land requirements.
- 14. Plot 2/21**
- 14.1 Comprises part of the grounds to the residential property known as High Breck Farm Bungalow, situated on the C262 Fir Covert Road.
- 14.2 The land is owned and occupied by Ms K M Bowhill and Mr M J Williamson.
- 14.3 The land is required for the Scheme to be developed as part of the improvements to the C262 Fir Covert Road.
- 14.4 The owners have not appointed a surveyor but discussions have been held with the landowners over the land requirements.
- 15. Plots 2/22, 2/23, 2/24 and 2/25**
- 15.1 Comprises agricultural land situated to the east of the C262 Fir Covert Road and extending as far as the Marriott's Way.
- 15.2 The land is owned by Mr P Gunther and Mrs D L Gunther and occupied by their company, PLG Farm Supplies.

-
- 15.3 The land is required for the Scheme to be developed as part of the new NDR highway alignment and a new bridleway. This will also include provision of land for environmental mitigation measures. Land is also being acquired to provide replacement land for Special Category Land.
- 15.4 The owners have appointed a surveyor to act on their behalf and negotiations are ongoing regarding the acquisition of the required land.
- 16. Plots 2/26, 2/27, 2/28, 2/29 and 10/12**
- 16.1 Comprises part of the public recreational path known as Marriott's Way in Taverham and an area of woodland off Newman Road in Rackheath.
- 16.2 These plots are owned by Broadland District Council. The plots at Marriott's Way are Special Category Land.
- 16.3 The land is required for the Scheme to be developed as part of the new NDR highway alignment at Taverham and for the realigned Newman Road track in Rackheath. Rights are required over lengths of the Marriott's Way to facilitate construction of the Marriott's Way Overbridge. The District Council will receive areas of replacement land, including the Overbridge Deck level, to compensate for the acquisition of the Special Category Land.
- 16.4 The Council have not appointed a surveyor but their officers have been made aware of the proposals and land requirements over a number of years.
- 17. Plot 2/33**
- 17.1 Comprises part of the grounds to the property known as Breck Farm Bungalow located on Breck Farm Lane (U57168).
- 17.2 The plot is owned by Mr D Q Gurney, Mrs J M Gurney and Mr D Acloque and Mr W D Barr, as Trustees of the Gurloque Settlement.
- 17.3 The land is required for the Scheme to provide a new turning head on Breck Farm Lane (U57168).
- 17.4 The owners have appointed a surveyor to act on their behalf and negotiations are ongoing regarding the acquisition of the required land.
- 18. Plots 2/34, 2/35, 2/36, 2/37 and 2/38**
- 18.1 Comprises agricultural land situated between the Marriott's Way and Furze Lane (U57168) to the east.
- 18.2 The land is owned by H G Blake (Holdings) Limited. There are no known tenants.

- 18.3 The land is required for the Scheme to be developed as part of the new NDR highway alignment. This will also include provision of land for environmental mitigation measures and the provision of temporary land to facilitate construction activities. Land is also being acquired to provide replacement land for Special Category Land.
- 18.4 The owners have appointed a surveyor to act on their behalf and negotiations are ongoing into acquiring the required land.
- 19. Plot 3/8**
- 19.1 Comprises agricultural land north of the C261 Reepham Road.
- 19.2 This plot is owned by Ms B Barrett. There are no known tenants.
- 19.3 The land is required for the Scheme to be developed as part of the new NDR highway alignment and improvements to the C261 Reepham Road.
- 19.4 The owner has been made aware of the proposals. She has appointed a surveyor to act on her behalf and negotiations are to commence regarding the acquisition of the required land.
- 20. Plots 3/11, 3/16 and 3/18**
- 20.1 Comprises an area of woodland north of the C261 Reepham Road, known as Drayton Drewary.
- 20.2 These plots are owned by Mr S J Baker and Mr J B Mayhew as Trustees of the Thorpe & Felthorpe Trust. There are no known tenants.
- 20.3 The land is required for the Scheme to be developed as part of the new NDR highway alignment. This will also include provision of land for environmental mitigation measures.
- 20.4 The owners are in the process of appointing a surveyor. They have met with the Applicant previously to discuss the impact of the Scheme on their property.
- 21. Plots 3/12, 3/13, 3/14, 3/15, 3/17, 5/24, 5/25, 9/16, 10/4, 10/13, 10/20, 10/21, 10/22, 10/26 and 10/29**
- 21.1 Comprises agricultural land north of the C261 Reepham Road, woodland adjacent to the A140 Cromer Road, land adjoining the A1151 Wroxham Road, land forming part of the grounds of Gazebo Barn, Rackheath and Hall Farm, Rackheath.
- 21.2 These areas of land are owned by the Applicant in its capacity as landowner, rather than Highway Authority.

-
- 21.3 The areas of land adjacent to the A140 Cromer Road and A1151 Wroxham Road were acquired as a result of historic highway improvements schemes but are not subject to existing highway rights.
- 21.4 The plots at Reepham and Rackheath are owned by the Applicant having been acquired either under a Blight Notice or by agreement in advance of the Scheme.
- 21.5 The land at Reepham is let on Farm Business Tenancies to Mr A Lloyd and R.M. Keeler & Sons. These agreements will be terminated before construction works commence. The areas at Rackheath are not occupied by third parties.
- 21.6 The land is to be used for the Scheme to be developed as part of the new NDR highway alignment, improvements to the C261 Reepham Road, Newman Track and improvements to the C283 Salhouse Road. This will also include provision of land for environmental mitigation measures and the construction of new drainage lagoons.
- 22. Plots 3/19 and 3/23**
- 22.1 Comprises agricultural land north of the C261 Reepham Road.
- 22.2 These plots are owned by Mrs S A Bransom. There are no known tenants.
- 22.3 The land is required for the Scheme to be developed as part of the new NDR highway alignment.
- 22.4 The landowner's existing private track between the C261 Reepham Road and Dog Lane (U57176) is severed by the Scheme. An alternative route is provided along Bell Farm Track and Overbridge.
- 22.5 The owner has been made aware of the proposals and land requirements over a number of years. She has appointed a surveyor to act on her behalf and negotiations are to commence regarding the acquisition of the required land.
- 23. Plots 3/21 and 3/22**
- 23.1 Comprises agricultural land north of the C261 Reepham Road and used by the owners as part of their free range chicken farm.
- 23.2 The land is owned and occupied by Mr F Ampofo and Mrs E Ampofo.
- 23.3 The land is required for the Scheme to be developed as part of the new NDR highway alignment. This will also include provision of land for environmental mitigation measures.

- 23.4 The owners have appointed a surveyor to act on their behalf and negotiations are ongoing regarding the acquisition of the required land. Discussions have included the possibility of providing alternative adjoining land to replace that required for the Scheme.
- 24. Plots 3/24 and 3/29**
- 24.1 Comprises agricultural land north of the C261 Reepham Road and west of Bell Farm Track.
- 24.2 These plots are owned by Mr B Bransom. There are no known tenants.
- 24.3 The land is required for the Scheme to be developed as part of the improved Bell Farm Track alignment and for environmental mitigation measures.
- 24.4 The owner has been made aware of the proposals and land requirements over a number of years. He has appointed a surveyor to act on his behalf and negotiations are to commence regarding the acquisition of the required land.
- 25. Plots 3/25, 3/26 and 3/27**

- 50. Plots: 6/13, 6/14, 6/15, 6/16, 6/17, 6/18, 6/20, 6/21, 7/1, 7/2, 7/3, 7/8, 7/9, 7/10, 7/11, 7/12, 7/13, 7/14, 7/15, 7/20 and 7/22**
- 50.1 Comprises various parcels of agricultural land. north-east and east of Norwich International Airport.
- 50.2 These plots are owned and occupied by Mr P D Cook and Mr A P Cook. Part of the land is leased to Lafarge Aggregates Limited.
- 50.3 The land is required for the Scheme to be developed as part of the new NDR highway alignment, C251 St Faiths Road turning head, Quaker Lane (U57188) turning head and new C246 Buxton Road / Quaker Lane (U57188) junction alignment . This will also include construction of new drainage lagoons, provision of land for environmental mitigation measures and private access to the Aeropark. Temporary use of land will also be made for topsoil storage and removal of the current Airport Security fence.
- 50.4 Access to the landowners' retained land is being provided by the creation of new Private Means of Access.
- 50.5 The owners have appointed a surveyor to act on their behalf and negotiations are ongoing.
- 51. Plot 7/7**
- 51.1 Comprises an electricity sub station.
- 51.2 This plot is owned by Eastern Power Networks Ltd.

-
- 51.3 The land is required for the Scheme to be developed for the provision of environmental mitigation measures.
- 51.4 The substation structure itself does not need to be replaced and the existing cable network will be amended accordingly. The precise details of the works will be agreed with the Statutory Undertaker as part of the detailed design.
- 52. Plots 7/16, 7/17, 7/18 and 7/26**
- 52.1 Comprises agricultural land to the west of the C246 Buxton Road, south of Quaker Lane (U57188)..
- 52.2 These plots are owned by Mr M A Dewing and Mr R T Bramley. They are occupied by Mr M A Dewing.
- 52.3 The land is required for the Scheme to be developed as part of the new NDR highway alignment, the new C246 Buxton Road / Quaker Lane (U57188) junction alignment and for a new Private Means of Access. This will also include provision of land for environmental mitigation measures and temporary land to facilitate construction activities.
- 52.4 Access to the retained land is being provided by the new Private Means of Access.
- 52.5 The owners have appointed a surveyor to act on their behalf and negotiations are ongoing regarding the acquisition of the required land.
- 53. Plots 7/30, 7/31, 7/32, 7/33, 8/1, 8/7, 8/9, 8/10, 8/11, 8/12, 8/13, 8/14, 9/1, 9/2, 9/3 and 9/5**
- 53.1 Comprises agricultural land extending from the east of the C246 Buxton Road to the B1150 North Walsham Road and then further eastwards to north of Beeston Lane (U57186), all forming part of the Beeston Estate.
- 53.2 These plots are owned by Mr M A Dewing and Ms H A Barrett as Trustees of the Beeston Estate. They are occupied by Mr M A Dewing. Land to the south comprises land within the proposed Beyond Green development. The developers have Restrictions on the Title.
- 53.3 The land is required for the Scheme to be developed as part of the new NDR highway alignment, improvements to the B1150 North Walsham Road and the construction of four new drainage lagoons. This will also include provision of land for environmental mitigation measures, the acquisition of drainage rights and the temporary use of land to facilitate construction activities.
- 53.4 Access to retained land is being provided by new Private Means of Access.

- 53.5 The owners have appointed a surveyor to act on their behalf and negotiations are ongoing regarding the acquisition of the required land. Contact has also been made with the developers.
- 54. Plots 9/4, 9/6 and 9/7**
- 54.1 Comprises agricultural land to the north of the A1151 Wroxham Road.
- 54.2 These plots are owned by Mrs J R Brooks and are tenanted by Mr C Durrant.
- 54.3 The land is required for the Scheme to be developed as part of the new NDR highway alignment, improvements to the B1151 Wroxham Road and a new bridleway. This will also include provision of land for environmental mitigation measures.
- 54.4 The owner has appointed a surveyor to act on her behalf and negotiations are ongoing regarding the acquisition of the required land. The Applicant has been informed that the tenancy is due to expire before works commence.
- 55. Plots 9/8 and 9/9**
- 55.1 Comprises agricultural land to the north of the A1151 Wroxham Road.
- 55.2 The ownership of these plots is uncertain as Land Registry plans do not abut and the conveyance history has some anomalies. The adjoining landowners have been assumed to be potential owners of these plots. Mr C Durrant is assumed to be the tenant.
- 55.3 The land is required for environmental mitigation measures.
- 55.4 The various potential landowners have been consulted about the Scheme and investigations to try and resolve the ownership issues will continue.
- 56. Plot 9/10**
- 56.1 Comprises woodland and part watercourse, known as The Springs, north of the A1151 Wroxham Road.
- 56.2 This plot is owned by Mr M F Trafford.
- 56.3 The land is required for the Scheme to be developed as part of the new NDR highway alignment, improvements to the B1151 Wroxham Road and to provide a new alignment for the access serving, amongst others, the Sewage Works.
- 56.4 The owners have appointed a surveyor to act on their behalf and negotiations are ongoing regarding the acquisition of the required land.

57. Plot 9/15

57.1 Comprises part of the private access to Hill Farm House, Wroxham Road and is also used as access to Hill Farm Lodge, Wroxham Road.

57.2 This plot is owned by Mr G Taylor and Mr P R Taylor.

57.3 The land is required for the Scheme to be developed as part of the improvements to the B1151 Wroxham Road.

57.4 The owners have been consulted about the Scheme and further contact is being made to open negotiations.

58. Plots 9/19, 9/22, 9/23, 9/27, 9/31, 9/32, 9/42, 10/35, 10/36 and 11/8

58.1 Comprises three separate areas of agricultural land. One is located immediately south of the A1151 Wroxham Road, another south of the C283 Salhouse Road, both in Rackheath, and the other north of the C442 Middle Road in Great Plumstead.

58.2 These plots are owned jointly by Mr P R Key and Mr G B Nicholls and Mr R G Nicholls as Executors of Moira Irene Nicholls dec'd. They are occupied by Mr P R Key.

58.3 The land south of the A1151 Wroxham Road is required for the Scheme to be developed as part of the new NDR highway alignment, improvements to the B1151 Wroxham Road, the construction of three new drainage lagoons, for provision of a new Private Means of Access and for environmental mitigation measures. Land is also to be acquired for the new A1151 Wroxham Road / C258 Green Lane West junction alignment.

58.4 The land south of the C283 Salhouse Road is required for the Scheme to be developed as part of the new NDR highway alignment, improvements to the C283 Salhouse Road, the construction of three new drainage lagoons, and for environmental mitigation measures.

58.5 The land north of the C442 Middle Road is required for the Scheme to be developed as part of the new NDR highway alignment, the Plumstead Road Roundabouts link road, improvements to the C442 Middle Road, the construction of a new drainage lagoon, and for environmental mitigation measures.

58.6 A combination of continued usage of existing field access points and new Private Means of Access will ensure access to the owners' retained land.

58.7 Separate agents have been appointed by the parties. Negotiations regarding the acquisition of this plot are ongoing with all of them.

59. Plots 9/20 and 9/21

59.1 These plots were previously understood to be owned by Mr A.Thornton. However further investigations have recently proved this not to be the case, rather that he worked for a company promoting the land through a planning process.

59.2 The land is required for the Scheme to be developed as improvements to the B1151 Wroxham Road and for the provision of land for environmental mitigation measures.

59.3 Given the ownership issues no discussions have taken place with the owner but investigations into its ownership are continuing.

60. Plots 9/24 and 9/25

60.1 Comprises land within the grounds of the residential property known as Oakwood, to the east of the A1151 Wroxham Road.

60.2 These plots are owned and occupied by Mr K A Basey.

60.3 The land is required for the Scheme to be developed as part of the improvements to the B1151 Wroxham Road and to extend bridleway facilities on the A1151 Wroxham Road.

60.4 The owner has not appointed a surveyor but discussions have been held with him regarding the acquisition of his interests.

61. Plot 9/26

61.1 Comprises parts of a private access track leading from the C258 Green Lane West

61.2 The owner is unknown despite diligent enquiry by the Applicant. Ownership had been assumed to rest with adjoining landowners although all is unregistered.

61.3 The land is required for the Scheme to be developed for a new Private Means of Access.

61.4 All adjoining owners and known users of the track have been consulted about the proposals. Investigations to try and resolve the ownership issues are continuing.

62. Plot 9/28

62.1 Comprises a sewage pumping station east of the A1151 Wroxham Road.

62.2 This plot is owned by Anglian Water Services Ltd.

62.3 The land is identified within the area of environmental mitigation measures. It is envisaged that the pumping station will be able to remain operational in its current location after the works.

62.4 The precise details of the works, and eventual level of acquisition requirement, will be agreed with the owner as part of the detailed design of the Scheme.

63. Plots 9/29, 9/30 and 9/37

63.1 Comprises two areas of agricultural land west of the C258 Green Lane West.

63.2 These plots are owned by SCR Limited, whose directors are Mr S E Cowell and Ms L S Ying. Part is occupied by Mr C P Cole and the rest by Mr I Curl.

63.3 The land is required for the Scheme to be developed as part of the new NDR highway alignment. This will also include provision of land for environmental mitigation measures.

63.4 In addition to the land acquired from the company they also own land to the west of Gazebo Farm, which is not directly affected by the Scheme. The existing access route to the land, from the C258 Green Lane West, is severed by the Scheme so new rights of access are to be provided over the Newman Track Overbridge and along the Private Means of Access.

63.5 The owner has appointed a surveyor to act on its behalf and negotiations are ongoing regarding the acquisition of the required land. No negotiations have been had with the occupiers as the owner has indicated that it will have terminated their agreements before the land is required for the Scheme.

64. Plot 9/33

64.1 Comprises parts of a private access track leading from the C258 Green Lane West

64.2 The owner is unknown despite diligent enquiry by the Applicant. Ownership had been assumed to rest with adjoining landowners although all is unregistered.

64.3 The land is required for the Scheme to be developed for the provision of environmental mitigation measures.

64.4 All adjoining owners and known users of the track have been consulted about the proposals. Investigations to try and resolve the ownership issues are continuing.

65. Plots 9/34, 9/35, 9/36, 9/38, 9/39, 10/1, 10/2, 10/3, 10/5 and 10/16

- 65.1 Comprises grassland areas to the west of the C258 Green Lane West, north of Gazebo Farm.
- 65.2 These plots are owned and occupied by Blanmar1 LLP. Blanmar2 LLP is the owner of the Mines and Minerals in the land.
- 65.3 The land is required for the Scheme to be developed as part of the new NDR highway alignment and provision of a new Private Means of Access. This will also include provision of land for environmental mitigation measures.
- 65.4 The owner has appointed a surveyor to act on its behalf and negotiations are ongoing regarding the acquisition of the required land.

66. Plots 10/6, 10/7 and 10/8

- 66.1 Comprises woodland, amenity land and garden land forming part of the property known as Gazebo Farm, Rackheath.
- 66.2 These plots are owned by Birse Civils Limited, who are the contractors for the Scheme and are using Gazebo Farm as a pre-Scheme site office. Norfolk County Council has an option to acquire those parts required for the Scheme.
- 66.3 The land is required for the Scheme to be developed as part of the new NDR highway alignment. This will also include provision of land for environmental mitigation measures. It will continue to be used as a site compound during the works.
- 66.4 Discussions are ongoing with the owner over the timing and mechanism for the transfer of the areas required for the Scheme.

67. Plots 10/9, 10/11, 10/17 and 10/18

- 67.1 Comprises parts of a private access track leading from Newman Road (U57490) which is to be re-routed over the Newman Track Overbridge.
- 67.2 Ownership had been assumed to rest with adjoining landowners although all is unregistered. Some adjoining owners do claim ownership of various stretches of the track.
- 67.3 The land is required for the Scheme to be developed as part of the new NDR highway alignment and provision of a new Private Means of Access. This will also include provision of land for environmental mitigation measures.
- 67.4 All adjoining owners and known users of the track have been consulted about the proposals. Investigations to try and resolve the ownership issues are continuing.

68. Plot 10/10

- 68.1 Comprises an area of woodland and disused access track west of the C258 Green Lane West.
- 68.2 This plot is owned and occupied by Mr C V Ondhia.
- 68.3 The land is required for the Scheme to provide a new access to land east of the NDR from the new Newman Track alignment.
- 68.4 The owners have been contacted but to date there have been no negotiations with the owner.

69. Plot 10/14

- 69.1 Comprises part of the forecourt to business premises north of the existing Newman Track west of the C258 Green Lane West.
- 69.2 This plot is owned Mr C.T. Brown but is currently unoccupied.
- 69.3 The land is required for the realigned Newman Track.
- 69.4 The owner has been made aware of the proposals but to date there have been no negotiations and no agent has yet been appointed.

70. Plot 10/15

- 70.1 Comprises part of the forecourt to business premises north of the existing Newman Track west of the C258 Green Lane West.
- 70.2 The owner is unknown despite diligent enquiry by the Applicant. The plot is occupied by Classic Car Restorations.
- 70.3 The land is required for the realigned Newman Track.
- 70.4 The investigations into ownership are continuing. The occupier has been made aware of the proposals.

71. Plot 10/19

- 71.1 Comprises woodland west of the C258 Green Lane West and south of the existing Newman Track.
- 71.2 This plot is owned by the Warren House Woodland Syndicate.
- 71.3 The land is required for the Scheme to be developed as part of the new NDR highway alignment, the new Newman Track Overbridge, provision of a new Private Means of Access and land for environmental mitigation measures.
- 71.4 The representative for the Syndicate is aware of the proposals and discussions regarding the Scheme have been taking place over a number of years.

72. Plots 10/23, 10/24 and 10/25

72.1 Comprises land west of the C258 Green Lane West used as a paddock.

72.2 These plots are owned and occupied by Mrs C E Humphrey.

72.3 The land is required for the Scheme to be developed as part of the new NDR highway alignment. This will also include provision of land for environmental mitigation measures and as a temporary topsoil storage area.

72.4 The owner is aware of the proposals and discussions regarding the Scheme have taken place over a number of years. No agent has yet been appointed.

73. Plots 10/27 and 10/28

73.1 Comprises agricultural land north of the C283 Salhouse Road and west of the C258 Green Lane West.

73.2 These plots are owned by Frontbench Limited and occupied by Place UK Ltd.

73.3 The land is required for the Scheme to be developed as part of the new NDR highway alignment, improvements to the C283 Salhouse Road and for environmental mitigation measures. It also includes an area for the provision of land for temporary topsoil storage purposes.

73.4 The owner and occupier (who are linked companies) have appointed a surveyor to act on their behalf and negotiations are ongoing regarding the acquisition of the required land.

74. Plot 10/30

74.1 Comprises an area of woodland north of the C283 Salhouse Road known as March Covert.

74.2 This plot is owned by Ms P F Dewing, Ms A F Guyton, Ms A S Purling and Ms S M Purling.

74.3 The land is required for the Scheme to provide a new Private Means of Access to land west of the NDR off the C283 Salhouse Road.

74.4 The owners are aware of the proposals and discussions have been held with them. No agent has been appointed to act on their behalf.

75. Plot 10/34

75.1 Comprises a strip of agricultural land to the south of the C283 Salhouse Road and west of the C258 Green Lane West.

- 75.2 This plot is owned by the successors to Robert Charles Caston. His two children have registered cautions against the title as it is understood that there are no title deeds.
- 75.3 The land is required for the Scheme to be developed as part of the improvements to the C283 Salhouse Road.
- 75.4 The two Proprietors of Registered Cautions are aware of the proposals and discussions have been held with one of them. No agent has been appointed to act on their behalf.
- 76. Plots 10/37, 10/38, 10/39, 10/41, 10/42, 10/43, 10/44, 10/48, 10/51, 10/52, 11/1, 11/5, 11/6 and 11/7**
- 76.1 Comprises parcels of agricultural land both north and south of the C874 Plumstead Road.
- 76.2 These plots are owned by Mr A H Barker. Part is occupied by MA Roper & Sons and part is occupied by Mr Barker himself.
- 76.3 The land is required for the Scheme to be developed as part of the new NDR highway alignment, including the NDR Bridge (Over Railway Line), the Plumstead Road Roundabouts link road and for improvements to the C874 Plumstead Road. This will also include provision of land for environmental mitigation measures and temporary land to facilitate construction activities. Land is also being acquired to provide replacement land for Special Category Land.
- 76.4 The owner and occupier have appointed a surveyor to act on their behalf and negotiations are ongoing regarding the acquisition of the required land.
- 77. Plot 10/40**
- 77.1 Comprises land above the Norwich to Cromer & Sheringham Railway Line, north of the C874 Plumstead Road.
- 77.2 This plot is owned by Network Rail Infrastructure Ltd.
- 77.3 The rights are required for the Scheme to enable construction of the NDR Railway Overbridge.
- 77.4 There has been no contact with the owner specifically regarding land compensation issues as all discussions have been as part of the Bridge Agreement and Basic Asset Protection Agreement negotiations.
- 78. Plot 10/45**
- 78.1 Comprises agricultural land north of the C874 Plumstead Road and west of the C258 Broad Lane.

78.2 This plot is owned by Mr I N Forder, Rev C Garrod, Mrs S Jacobs and Ms A M Fox as Trustees of the Great Plumstead Fuel Allotment Charity. It is occupied by Mr R Baines.

78.3 The land is required to provide a new Private Means of Access. As the land comprises Special Category Land replacement land is being provided immediately to the west.

78.4 The Trustees and occupier have appointed a surveyor to act on their behalf and negotiations are ongoing regarding the acquisition of the required land.

79. Plots 10/49, 10/50, 11/2, 11/3 and 11/4

79.1 Comprises agricultural land south of the C874 Plumstead Road and west of the C258 Broad Lane.

79.2 The owner is unknown despite diligent enquiry by the Applicant.

79.3 The land is required for the Scheme to be developed as part of the improvements to the C874 Plumstead Road and the construction of a new drainage lagoon. This will also include provision of land for environmental mitigation measures.

79.4 Recent investigations have identified a possible tenant and these are being explored further to try and establish ownership details.

80. Plot 10/53

80.1 Comprises part of access driveway to the residential property known as The Railway Crossing, Plumstead Road, Thorpe End.

80.2 This plot is owned and occupied by Mr C R Scott and Mrs L R Scott.

80.3 The land is required for the Scheme to be developed as part of the C874 Plumstead Road realignment works arising from the new NDR Bridge (Over Plumstead Road).

80.4 The owners have appointed a surveyor to act on their behalf. Discussions with the owner have indicated that a Blight Notice may be served on the Applicant given the proximity of the Scheme to their property. The Applicant has indicated that, in principle, it would be agreeable to the acquisition of the property.

81. Plot 11/9

81.1 Comprises part of the grounds and private access track to the property known as Oaks Farm, Middle Road, Great Plumstead.

81.2 This plot is owned by Mr G.B Nicholls and Mr R.G Nicholls as Executors of Moira Irene Nicholls dec'd.

81.3 The land is required for the Scheme to be developed as part improvements to the C442 Middle Road highway alignment. This will also include provision of land for environmental mitigation measures.

81.4 The Executors have appointed a surveyor to act on their behalf and negotiations are ongoing regarding the acquisition of the required land.

82. Plots 11/11, 11/12, 11/13, 11/16 and 11/18

82.1 Comprises two parcels of agricultural land. One is south of the C442 Middle Road and the other south of Low Road (U59392).

82.2 These plots are owned and occupied by Mr P R Key.

82.3 The land is required for the Scheme to be developed as part of the new NDR highway alignment, improvements to the C442 Middle Road and provision of a turning head on Low Road (U59392). This will also include land for the construction of a new drainage lagoon, provision of land for environmental mitigation measures, a compound and temporary topsoil storage area.

82.4 The owner has appointed a surveyor to act on his behalf and negotiations are ongoing regarding the acquisition of the required land.

83. Plots 11/19, 11/20, 11/21 and 12/3

83.1 Comprises agricultural land east of Green Lane (U59278) and south of Low Road (U59392).

83.2 These plots are owned by Mr D W Jacobs and Mrs S A Jacobs. They are occupied by R Jones & Son.

83.3 The land is required for the Scheme to be developed as part of the new NDR highway alignment and a new bridleway. This will also include land for the construction of a new drainage lagoon and provision of land for environmental mitigation measures.

83.4 Both the owner and occupier have appointed surveyors to act on their behalf and negotiations are ongoing regarding the acquisition of the required land.

84. Plots 11/22, 11/23, 12/1 and 12/2

84.1 Comprises agricultural land east of Green Lane (U59278) and north of Smeeth Lane (U59400).

84.2 These plots are owned by Mr F D Feilden and Mrs J M Feilden and occupied by R Jones & Son.

- 84.3 The land is required for the Scheme to be developed as part of the new NDR highway alignment. This will also include land for the construction of a new drainage lagoon and provision of land for environmental mitigation measures.
- 84.4 Both the owner and occupier have appointed surveyors to act on their behalf and negotiations are ongoing regarding the acquisition of the required land.
- 85. Plots 12/7, 12/8, 12/9, 12/10, 12/11, 12/12, 12/13, 12/14, 12/15, 12/16, 12/30, 12/50, 12/51, 12/52 and 12/54**
- 85.1 Comprises two blocks of agricultural land. The first is east of the C830 Broadland Way, south of Smea Lane (U59400) and north of the A47(T) Norwich Southern Bypass. The second is the area enclosed south of the A47(T) Norwich Southern Bypass and north of its Westbound Diverge Slip Road (the A1042 Yarmouth Road), north east of the Postwick Park & Ride Site.
- 85.2 These plots are owned and occupied by WR & PJ Tann Ltd. Ifield Estates Ltd have options on the land and a consented planning permission for the development of a new business park - the Broadland Gate Development.
- 85.3 The land is required for the Scheme to be developed as part of the new NDR highway alignment, the Broadland Gate Link Road (leading from the Peachman Way Roundabout to the Business Park Roundabout), the new A47(T) Trunk Road Eastbound Diverge and Merge Slip Roads and the construction of 3 new drainage lagoons. This will also include provision of land for environmental mitigation measures and temporary land to facilitate construction activities.
- 85.4 The Applicant has an existing Conditional Contract with the owner and option holder in respect of the acquisition of the highway land required for the Broadland Gate Development. The owner has appointed a surveyor to act on his behalf and negotiations are ongoing with regard to the acquisition of any land falling outside of the Conditional Contract.
- 86. Plots 12/17**
- 86.1 Comprises agricultural land north of the A47(T) Norwich Southern Bypass, south of The Grange.
- 86.2 The plot is owned and occupied by Mr P P Walker.
- 86.3 The land is required for the Scheme to be developed as part of the new Private Means of Access to The Grange.

- 86.4 The Applicant has an existing Conditional Contract with the Landowner in respect of the acquisition of the land required for the new Private Means of Access. The owner has appointed a surveyor to act on his behalf.
- 87. Plot 12/18**
- 87.1 Comprises part of the existing private driveway to the property known as The Grange, Yarmouth Road, Postwick.
- 87.2 The plot is owned by Mrs E J M Cuppens-Ebus.
- 87.3 The land is required for the Scheme to be developed to enable the new Private Means of Access to The Grange to be tied in to the existing driveway.
- 87.4 The Applicant has an existing Conditional Contract with the owner covering the development and transfer of the new Private Means of Access.
- 88. Plots 12/19, 12/20, 12/21, 12/22, 12/23, 12/24, 12/25, 12/26, 12/27, 12/28, 12/29, 12/34, 12/37, 12/38, 12/39, 12/41, 12/42, 12/44, 12/46 and 12/47**
- 88.1 Comprises existing A47(T) Norwich Southern Bypass highway land.
- 88.2 These plots are owned and occupied by the Secretary of State for Transport, in his capacity as Highway Authority.
- 88.3 The land is required for the Scheme to be developed as part of the new A47 Trunk Road highway alignment. This will also include the provision of land for environmental mitigation measures.
- 88.4 The Applicant and the Highways Agency, on behalf of the Secretary of State for Transport, have agreed that the works on these areas of land will be carried out pursuant to the terms of an Agreement under Section 6 of the Highways Act 1980.
- 89. Plots 12/36, 12/40 and 12/45**
- 89.1 Comprises existing A47(T) Norwich Southern Bypass highway land.
- 89.2 These ownership of these plots are unknown but they are occupied by the Secretary of State for Transport, in his capacity as Highway Authority.
- 89.3 The land is required for the Scheme to be developed as part of the new A47 Trunk Road highway alignment.

89.4 The Applicant and the Highways Agency, on behalf of the Secretary of State for Transport, have agreed that the works on these areas of land will be carried out pursuant to the terms of an Agreement under Section 6 of the Highways Act 1980.

90. Plot 12/61

90.1 Comprises land south of the A1042 Yarmouth Road (A47(T) Westbound Diverge Slip Road).

90.2 The plot is owned by Mr H M Coghill and Mr J P Heal. The Applicant has an option on the land in connection with the Postwick Park & Ride extension scheme.

90.3 The land is required temporarily for the Scheme to be used as a Site Compound.

90.4 The Applicant has an existing Conditional Contract with the owners covering the land.

Appendix 3

Explanations relating to alternative routes for Stopped Up Streets, Streets subject to prohibition of use through Traffic Regulation Measures and Private Accesses to be stopped up

Introduction: Schedule 6 to the DCO – Streets and private access to be stopped up for which a substitute is to be provided and other new streets and access to be provided; and private access to be stopped up for which no substitute is to be provided.

Streets to be stopped up and new streets to be substituted and other new streets to be provided

1. Part 1 of Schedule 6 to the DCO sets out the streets which are to be stopped up and for which a substitute is to be provided, and details other new streets which are to be provided as a consequence of the NDR. Column (5) of Part 1 of the Schedule gives the reference letter of the substitute, or other new, street which is being provided and that street will be an all-purpose street, i.e. a street subject to motorised vehicular use, other than where another status, e.g. 'bridleway', appears in brackets beneath its reference letter. The reference letter which appears in column (5), for substitute and other streets, appears on the Street Plans against the particular new street concerned. Where the substitute street is the NDR, or a component of it, then that description for the substitute street appears in column (5).
2. In all cases of where a street is being stopped up, a substitute street, or streets, is being provided for *some*, or *all*, types of user of the original street. In a small number of cases, a length of all-purpose street is being stopped up and its remaining part(s) will not connect with, or cross over or under, the NDR, but a substitute street for those of its pedestrian, equestrian and/or cyclist users is still to be provided, by way of a new bridleway, or cycle track, to connect with and/or cross over/under the NDR, as an alternative route for those particular users.

Private access to be stopped up for which a substitute is to be provided and other new means of access to be provided; and private access to be stopped up for which no substitute is to be provided

3. Part 2 of Schedule 6 to the DCO sets out the private access which are to be stopped up and for which a substitute is to be provided, and details other new means of access which are to be provided as a consequence of the NDR. Column (3) of Part 2 of the Schedule gives the reference of the access to be stopped up and which is identified on the Street Plans by that same reference, and column (5) of that part gives the reference number of the substitute, or other, new means of access and which is also identified on the Street Plans with that same reference number. Part 3 of Schedule 6 describes the private access to be stopped up and for which no substitute is to be provided, and identifies those access on the Street Plans by the reference given to them in column (3) of that part of Schedule 6.

General description of the street and private access stopping ups and of substitute and other streets and new means of access

4. The general affect of the NDR upon streets and private access, and of substitute proposals, working from the westerly commencement point of the NDR on the A1067 Fakenham Road eastwards, then southwards, to the A47 Trunk Road at Postwick, is set out below, by reference to the Street Plans, with an explanation and reasons given where no substitute street, or access, is being provided for a one which is to be stopped up.

5. Street Plans (Sheet 1 of 12) Fakenham Road

- Attlebridge Restricted Byway No.3 will be diverted, for its south easterly length, from its current connection with the A1067 Fakenham Road, to connect with the northern arc of the A1067 Fakenham Road Roundabout, proposed under the NDR Scheme. This will result in a shorter route for users travelling to and from the north west along the A1067 Fakenham Road, from and to the diverted restricted byway route, and add some 250 metres to the journey of those travelling to and from the south east along the A1067 Fakenham Road, who otherwise choose not to travel along the NDR from junction connections to the east.

- Private access tracks to be stopped up in this vicinity, to the north of the NDR, will be substituted by a new means of access track, to be co-existent with diverted Attlebridge Restricted Byway No.3, to access premises to the north of the NDR. Other field access stopped up to agricultural land on the north of the A1067 Fakenham Road, will be substituted with a new means of access (X0 on the Street Plans), set back at the same point on the new northern boundary of the A1067 Fakenham Road. The south easterly access on the private service road to Old Hall Farm to be stopped up (PMA 1 on the Street Plans) will not be substituted, as alternative means of access exists via the main access track to Old Hall Farm.

6. Street Plans (Sheet 2 of 12) Fir Covert Road to Breck Farm Lane and Marriott's Way

- A length of the C262 Fir Covert Road will be stopped up, where crossed by the NDR Fir Covert Road Roundabout. Remaining C262 Fir Covert Road will be connected from the north and south with the NDR Fir Covert Road Roundabout, providing an all-movement entry/exit roundabout junction with the NDR and maintaining cross-NDR community connections.
- A length of Breck Farm Lane/Furze Lane (U57168) will be stopped up, from just north east of Breck Farm Bungalow to a point on the north side of the NDR. Pedestrian, equestrian and cyclist crossing of the NDR will be provided by new bridleway routes to be provided along the south and north sides of the NDR (C, D, E, F and H on the Street Plans) leading to crossing points to the west, at the NDR Fir Covert Roundabout, and to the east, at the NDR Reepham Road Roundabout, as well as in the new Marriott's Way (recreational public amenity path) overbridge crossing of the NDR. Alternative vehicular traffic routes, for the length of remaining Breck Farm Lane (U57168) south of the NDR, are provided by way of use of the A1067 Fakenham Road to the south and access across and to connect with the NDR at the Fir Covert Road Roundabout to the west, as well as by means of the private means of access track to be provided along stopped up Breck Farm Lane (U57168) (X8 on the Street Plans) and running along the south side of the NDR to junction with the C261 Reepham Road. For the length of remaining Furze Lane (U57168) to the north of the NDR, alternative vehicular routes are provided by way of use of the C261 Reepham Road to the north and access across and to connect with the NDR at the Fir Covert Road Roundabout.
- Private access stopped up to premises south and north of the NDR will be substituted in all cases.

7. Street Plans (Sheet 3 of 12) Reepham Road to Bell Farm Track

- A length of the C261 Reepham Road will be stopped up, where crossed, and will be substituted by, the NDR Reepham Road Roundabout. Remaining C261 Reepham Road will be connected from the south east and north west with the NDR Reepham Road Roundabout, providing all-movement access to and from the NDR and maintaining local community connections.
- Drayton Restricted Byway No.6 will be diverted, for its south westerly length, from its current connection with the C261 Reepham Road, to connect with the north side of the NDR Reepham Road Roundabout (J on the Street Plans), resulting in a slightly shortened route and journey distance for users of the diverted restricted byway. The diverted route for the restricted byway will be co-existent with a new means of access (X11 and X12 on the Street Plans), which will substitute the private access to be stopped up which currently co-exists along the length of the restricted byway which will be diverted.
- Other private access stopped up to premises will be substituted with new private access, with the exception of the westerly access track to Bell Farm (PMA 16 on the Street Plans), which is severed by the NDR, and which premises benefits from another access over the NDR, by means of the realigned Bell Farm Track access (X15 on the Street Plans).
- Horsford Restricted Byway No.5 and private access track Bell Farm Track will be maintained over the NDR, on a slightly diverted and similar length route (K and X15 on the Street Plans), but returning to their same connection points with Dog Lane (U57176) and the C261 Reepham Road.

8. Street Plans (Sheet 4 of 12) East of Bell Farm Track to Drayton Lane

- C262 Drayton Lane (North) will be stopped up between its junction with the C261 Reepham Road and, in the north east, at the southern curtilage of the property 'Rookery North'. New Link Roads (N and P on the Street Plans) will be provided between the B1149 Holt Road and the NDR Drayton Lane Roundabout, and between that roundabout and the C261 Reepham Road, providing access to and from the NDR and maintaining local community connections.
- A length of Horsford Restricted Byway No.7 will be stopped up from its connection with the existing C282 Drayton Lane, but will maintain a connection with the new Drayton Lane Link Road, north of the NDR Drayton Lane Roundabout, which will provide continuity for that restricted byway, together with other new bridleways and cycle tracks on both the north and south sides of the NDR for those particular types of user.

- The C262 Drayton Lane (South) will be stopped up at its junction with the C261 Reepham Road, with the remaining lane providing use for agricultural access to land either side of, and which are the only premises along its remaining length. A new cycle track (S on the Street Plans) will maintain a route for cyclists and pedestrians to connect remaining C262 Drayton Lane (South) with the C261 Reepham Road.
- Private access stopped up to premises will be replaced with new private access, other than for a field access (PMA 23 on the Street Plans) and a length of access track (PMA 26 on the Street Plans), both being accesses to land of Glebe Farm, and which farm holding retains other access to its severed parts north and south of the NDR and which will be connected via the new Drayton Lane Link Roads and the NDR Drayton Lane Roundabout.

9. Street Plans (Sheet 5 of 12) Cromer Road Interchange to Old Norwich Road

- Lengths of the A140 Cromer Road and the B1149 Holt Road will be stopped up at the NDR Cromer Road grade separated interchange. The A140 Cromer Road will maintain its connection north to south across the NDR via a new length of street (new street W on the Street Plans) which will provide its connection with northerly and southerly roundabouts which will have slip road connections to the eastbound and westbound carriageways of the NDR and which, together, will form the grade separated junction at that location. The B1149 Holt Road will terminate on the north side of the NDR at New Holme Farm, with the alternative route for vehicular traffic being provided via the NDR Drayton Lane Link Roads and Roundabout to the west, providing access to and from the NDR and maintaining local community connections.
- Holly Lane (U57142) will be stopped up south west of the NDR in the vicinity of Manor Farm, with the remaining lane providing use for access to agricultural land either side of its remaining length. For the length of remaining Holly Lane (U57142) to the south of the NDR, alternative vehicular routes are provided by way of use of the C261 Reepham Road to the south west and which will provide connections with the new Drayton Lane Link Roads and NDR Drayton Lane Roundabout to the west, and with the A140 Holt Road and its connection with the NDR Cromer Road grade separated junction to the east, both of which junctions will provide access to and from the NDR and maintain local community connections across it.
- Private access to be stopped up are to be substituted with new means of access, other than where the fields which they serve (PMA 28, PMA 29 and PMA 30 on the Street Plans) are to be acquired for the NDR, or where (PMA 28 and PMA 33 on the Street Plans) other means of access already exist to the land concerned.

10. Street Plans (Sheet 6 of 12) Access to Norwich International Airport and St. Faiths Road, and (Sheet 7 of 12) Buxton Road

- The south easterly length of the C251 Bullock Hill will be stopped up on the north side of the NDR. New streets (Y and Z on the Street Plans) will be provided from the south side of the NDR Airport Roundabout, leading to Petans the Training Centre and to the Airport Mast and curtilage road of Norwich International Airport, providing the alternative route and continuing access to those facilities, previously served by the C251 Bullock Hill.
- Horsham St. Faith and Newton St. Faith Bridleway No.6 and Spixworth Bridleway No.1, which lead north westwards off the corner of the C251 St. Faiths Road and Quaker Lane(U57188), will be stopped up. A new cycle track (AA on the Street Plans), on the south side of the NDR, and a new bridleway (X on the Street Plans), on the north side of the NDR, leading to and from the NDR Airport Roundabout to the north west, and a new bridleway (BB on the Street Plans), on the south side of the NDR, leading to the C246 Buxton Road to the east, will provide alternative route connections for equestrian, pedestrian, and cyclist, users of the former bridleways.
- A length of the C246 Buxton Road, where to be crossed by the NDR corridor, will be stopped up. A new length of street (DD on the Street Plans), to the east of its present location, will be provided, together with the realignment eastwards of lengths of the C246 Buxton Road, which will provide continuity of the C246 Buxton Road over the NDR on a new overbridge, retaining the same route connections as it had before.
- A length of Quaker Lane (U57188) will be stopped up at its junction with the C246 Buxton Road and will be substituted by a new length of street (CC on the Street Plans), just to the south of the stopped up length, which will provide its new substitute connection with the C246 Buxton Road.
- Private access to be stopped up will be substituted by new means of access, with the exception of the access to be stopped up to Red Hall Farm (PMA 38 on the Street Plans) and which benefits from existing access to its lands south of the NDR.

11. Street Plans (Sheet 8 of 12) North Walsham Road to Beeston Lane and North Walsham Road/Rackheath Lane/Crostwick Lane Junction Improvement

- A length of the B1150 North Walsham Road will be stopped up, where crossed by the NDR North Walsham Roundabout. Remaining B1150 North Walsham Road will be connected from the north and south with the NDR North Walsham Road Roundabout, providing an all-movement entry/exit roundabout junction with the NDR and maintaining cross-NDR community connections.

- The C249 Rackheath Lane will be closed (by traffic regulation) at its junction with B1150 North Walsham Road. The remaining length of lane largely serves the agricultural community in the area. Alternative routes to connect with the NDR, and to connect with the local street network, exist to the east.
- Private access stopped up to premises south and north of the NDR will be substituted with new means of access, other than for the access track to Red Hall Farm (PMA 39 on the Street Plans), to the north side of the NDR, and which farm holding benefits from existing access to the north side of the NDR, off the B1150 North Walsham Road.

12 Street Plans (Sheet 9 of 12) Wroxham Road and Wroxham Road/Green Lane West Junction Improvement

- A length of the A1151 Wroxham Road will be stopped up, where crossed by the NDR Wroxham Roundabout. Remaining A1151 Wroxham Road will be connected from the north and south with the NDR Wroxham Road Roundabout, providing an all-movement entry/exit roundabout junction with the NDR and maintaining cross-NDR community connections.
- Private access stopped up to premises north and east and west of the NDR will be substituted in all cases.
- The C258 Green Lane West will be closed, by traffic regulation, at its junction with the A1151 Wroxham Road. A new Link Road (GG on the Street Plans) will provide the new connection of the C258 Green Lane West with the A1151 Wroxham Road.

13 Street Plans (Sheet 10 of 12) Newman Road, Salhouse Road and Railway Crossing

- Newman Road (U57490) will be stopped up south westwards from its junction with Long's Crescent, both as a street and as a private access track. A substitute bridleway (II on the Street Plans), and new private access track (X47, X47a – X47i series on the Street Plans), will be provided along that route, to cross over the NDR on a new Newman Track overbridge, providing access to premises on both the east and west side of the NDR and, for equestrian, pedestrian and cyclist users, to connect with the new bridleway leading north westwards (HH on the Street Plans) and the new cycle track leading south eastwards (JJ on the Street Plans), alongside the west side of the NDR from the west side of the overbridge.
- A length of the C283 Salhouse Road will be stopped up, where crossed by the NDR Salhouse Road Roundabout. Remaining C283 Salhouse Road will be connected from the south west and north east with the NDR Salhouse Road Roundabout, providing an all-movement entry/exit roundabout junction with the NDR and maintaining cross-NDR community connections.

- The C258 Broad Lane is to be subject of closure, by traffic regulation, at its north westerly junction with the C874 Plumstead Road. Local connections to the NDR to the south of the closed junction will be via the Plumstead Road connections with the NDR and, to the north of the junction, via the Salhouse Road Roundabout connection with the NDR.
- Private accesses to be stopped up are to be substituted with new means of access, other than where existing means of access to the relevant land exists.

14 Street Plans (Sheet 11 of 12) Plumstead Road, Middle Road and Low Road and Thorpe End Highway Improvement Measures

- Low Road (U59392) will be stopped up from just east of Green Lane (U59278), just to the west of the Laurel Farm group of properties, to a point on the east side of the NDR. Remaining Low Road (U59392) to the east of the NDR will continue to serve residential properties and agricultural land off that street, to the east of the NDR, whilst the Laurel Farm group of properties and agricultural land to the west of the NDR will be served by a new private means of access to be provided along stopped up Low Road (U59393). The substitute vehicular route for cross-NDR community connections, will be to the north, via the new C442 Middle Road overbridge of the NDR. For connections with the NDR, vehicular traffic from Low Road (U59392) will proceed via the C874 Plumstead Road Roundabout North and the proposed Link Road to the NDR Plumstead Road Roundabout South, to join or leave the NDR and for traffic from the Laurel Farm group of properties on the west of the NDR, will have the opportunity to proceed via Green Lane (U59278) and the C830 Broadland Way, to join the Broadland Gate Link Road and the NDR at the Business Park Roundabout.
- Cross-NDR connections for non-vehicular traffic will be provided, by means of a new bridleway (PP on the Street Plans), along stopped up Low Road (U59392) on the west side of the NDR, connecting with a new bridleway running along the west side of the NDR (OO on the Street Plans), northwards to the C442 Middle Road overbridge crossing of the NDR, to return southwards via a new bridleway (NN on the Street Plans) on the east side of the NDR, to rejoin Low Road (U59392) on the east side of the NDR.

15 Street Plans (Sheet 12 of 12) Smea Lane and Postwick Interchange

- A length of Great and Little Plumstead Footpath No.5 will be stopped up (part shown on Street Plans (Sheet 11 of 12)) from the east side of the NDR to its junction with Smee Lane (U59400). A new bridleway route (OO on the Street Plans), along the west side of the NDR between the C442 Middle Road overbridge in the north and Smee Lane (U59400) in the south; and a new bridleway route (NN on the Street Plans), along the east side of the NDR between the C442 Middle Road overbridge in the north and Smee Lane (U59400), together with a new cycle track (RR on the Street Plans) from that point down to the NDR Business Park Roundabout, and beyond, will provide for cross-NDR connections via that overbridge crossing and roundabout, for pedestrian users of the former footpath, as well as equestrians and cyclists.
- A length of Smee Lane (U59400) will be stopped up from just east of the Nursery on the north side of the lane, to a point on the east side of the NDR. Remaining Smee Lane (U59400) to the east of the NDR will continue to serve a small number of residential and agricultural properties and land along its length, whilst its remaining length on the west of the NDR will continue to serve the Nursery and 'Fairview House' and agricultural land lying off its length. Vehicular alternative routes to connect with the NDR will be, to the north, at the Plumstead Road junctions and, to the south, with the NDR Business Park Roundabout, from that length of remaining Smee Lane (U59400) on the west side of the NDR.
- A length of Postwick Footpath No.2, from its junction with the NDR Business Park Roundabout, southwards to its junction with the A1042 Yarmouth Road on the south side of the NDR will be stopped up. The remaining length of the footpath will be connected to the new cycle track (RR on the Street Plans) running along the east side of the NDR, at the NDR Business Park Roundabout, and which will provide a continuous route for pedestrian users of the former footpath, as well as cyclists, down to and across the new NDR bridge crossing of the A47 Trunk Road, to join the new footway/cycleway within the northern side of the A1042 Yarmouth Road to its junction with the C440 Church Road, thereby providing a grade-separated route crossing of the A47 Trunk Road, as opposed to the former at-grade crossing of the A47 Trunk Road of the former footpath.
- The A47(T) eastbound diverge slip road, leading from the eastbound carriageway of the A47(T) to the Postwick North West Roundabout on the A1042 Yarmouth Road, will be stopped up. A new A47(T) eastbound diverge slip road, to the NDR Postwick North East Roundabout, will provide the substitute route. A new cycle track (TT on the Street Plans) will be provided along the stopped up A47(T) eastbound diverge slip road, providing a segregated cyclist facility to join the existing footway/cycleways at the Postwick North West Roundabout and with a new footway/cycleway which is to be provided across the south west arc of that roundabout across the junction of the former stopped up slip road.

- The A47(T) eastbound merge slip road, from the Postwick North West Roundabout on the A1042 Yarmouth Road to the eastbound carriageway of the A47(T), will be stopped up. A new A47(T) eastbound merge slip road, from the NDR Postwick North East Roundabout to the eastbound carriageway of the A47(T), will provide the substitute route.

INTRODUCTION

This document is submitted in relation to the application for a proposed Development Consent Order by Norfolk County Council to the Planning Inspectorate Secretary of State, under the Planning Act 2008.

The application is for the Norfolk County Council (Norwich Northern Distributor Road (A1067 to A47(T))) Order, to grant development consent for the construction of a new highway running west to east, to south, between the A1067 Fakenham Road and the A47 Trunk Road at Postwick, including improvements to the existing highway network to the north and north east of Norwich.

This document comprises part of the application documents and relates to Regulation 5(2)(h) of the Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2009.

1 Introduction

1.1 Summary

- 1.1.1 This Funding Statement (this Statement) relates to an application (the Application) by Norfolk County Council (NCC or Applicant) to the Secretary of State under the Planning Act 2008 (PA2008) for development consent for the Norwich Northern Distributor Road (the Scheme), which would grant powers to NCC to construct and operate the Scheme.
- 1.1.2 This Statement has been prepared in compliance with the requirements of Regulation 5(2)(h) of the Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2009 and in accordance with the Department for Communities and Local Government guidance, 'Planning Act 2008: Application form Guidance' (June 2013) and 'Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land' (September 2013) .
- 1.1.3 It is required because the development consent order (DCO) for the Scheme would authorise the compulsory acquisition of land or interests in land. Regulation 5(2)(h) therefore requires the Applicant to provide a statement indicating how the implementation of the powers conferred by the DCO would be funded.
- 1.1.4 This Statement forms part of a suite of Application documents. It should be read alongside and is informed by those documents. In particular, this Statement supplements the Statement of Reasons for Compulsory Acquisition (4.1 Statement of Reasons).

2 Capital funding

2.1 Scheme Cost

2.1.1 The current cost estimate for the Scheme that is the subject of the Application is £148.55 million. This cost estimate includes construction costs, preparation costs since 2012/13, supervision costs and land acquisition costs. This is an estimate of the anticipated outturn cost and therefore includes an allowance for inflation.

2.2 Scheme Funding

2.2.1 The capital costs of the Scheme will be jointly funded by the Department of Transport (DfT) and NCC.

2.2.2 In September 2011, NCC submitted a Development Pool bid for Government funding for Local Authority major transport schemes in respect of the Scheme (Appendix A).

2.2.3 This bid was approved by DfT in December 2011, with the Scheme being given "Programme Entry " status and an award of provisional funding (with a fixed maximum DfT contribution) (Appendix B)

2.2.4 DfT's funding grant is capped at £86.5m and is subject to satisfactory completion of all remaining statutory processes, and is made on condition that before 'Full Approval' will be granted, NCC is required to commit to a funded and programmed package of sustainable transport measures in Norwich city centre, as proposed in the Norwich Area Transportation Strategy (NATS).

2.2.5 NATS has evolved and delivered improvements over a number of years. NATS4, the latest version of the Strategy, was adopted in 2004 and its Implementation Plan (NATSIP) was adopted in March 2010 with the most recent update in November 2013 which identified progress on delivery, sets out the current and emerging programme, and highlights the relationship between NATS' schemes and the wider growth and development agenda. NATSIP takes account of the implications of emerging funding opportunities including the Community Infrastructure Levy.

2.2.6 The key features of NATSIP are;

City centre improvements

A bus rapid transit (BRT) network

A core bus network

A package of cycling and walking improvements

Specific rail service improvements

Smarter choices initiatives, like travel planning

Highway network improvements

The Northern Distributor Road

- 2.2.7 As part of the funding conditions from DfT, there is a requirement to continue to deliver the NATS package of measures. NATS IP sets out the overall basis for scheme delivery across the Norwich Policy Area over the next 10-15 years. A detailed, two-year programme of schemes for delivery is rolled-forward each year, which Members are asked to agree annually as part of the annual Local Transport Plan capital programme.
- 2.2.8 As part of this requirement, a progress tracker was developed to clearly show the schemes delivered in the past, what NCC is delivering presently and what NCC propose to implement with potential funding sources in the next ten to fifteen years.
- 2.2.9 Given NCC's commitment to fund and programme a package of sustainable transport measures as required by the DfT condition and as explained above, if DCO is granted for the Scheme, NCC will immediately submit an application for Full Approval to the DfT. Whilst the DfT Programme Entry funding decision related to a road from the junction with the A47(T) at Postwick to the A140 (Cromer Road) near Norwich International Airport to the north of the City, NCC's Cabinet considered a report on 2 April 2012 which included details for the section from the A140 to the A1067. The Cabinet resolved to submit the Application for the Scheme (to the A1067) and underwrite the additional costs (Appendix C).
- 2.2.10 NCC's Cabinet considered further reports in December 2012 and September 2013 which discussed possible design changes following public consultation and the additional cost implications. A further report to NCC's Cabinet on 4 November 2013 consolidated all the additional costs into a revised cost profile (Appendix D). On 4 November 2013 the Cabinet resolved to underwrite

£60.34m towards the scheme in accordance with the funding profile set out in Appendix D.

3 Land acquisition

- 3.1.1 The current cost estimate (see paragraph 2.1.1) includes an amount to cover the total cost of the payment of compensation for the compulsory acquisition of land, interests in land and rights over land.
- 3.1.2 To date, four pieces of land have been purchased relating to the Scheme, as they would have been affected by blight. Should any future claims for blight arise, the costs of meeting any valid claims will be met by NCC.

4 Appendices

4.1 Appendix A – Development Pool Bid

**LOCAL AUTHORITY MAJOR SCHEMES
BEST AND FINAL FUNDING BID
SEPTEMBER 2011**

Scheme Name	Norwich Area Transportation Strategy - Norwich Northern Distributor Route (NDR)
Local Authority	Norfolk County Council (NCC)

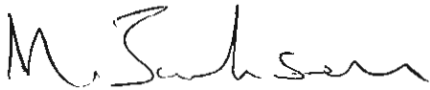

SCHEME COST SUMMARY (£m)		
	Scheme As Previously Configured (from section 1.4)	Revised Scheme (from section 4.4)
LA contribution *	£18.8*	£22.0*
Third Party Contribution		
- Growth Point	£4.5	£4.0
- CIF (CLG)	£21.9	£19.0
DfT Funding Contribution	£70.4	£67.5
Total	£115.6	£112.5
<p>* NOTE: The LA Contribution figures do not include Part 1 claims. Both sets of figures include inflation increases assuming a scheme opening in 2017</p>

NOTE: Bids should be received by the Department by Noon on 9th September 2011.

SENIOR RESPONSIBLE OWNER DECLARATION

As Senior Responsible Owner for the Norwich Northern Distributor Route (NDR) I hereby submit this Best and Final Funding Bid to DfT on behalf of Norfolk County Council and confirm that I have the necessary authority to do so.

Name: Mike Jackson	Signed: 
Position: Director of Environment, Transport and Development	

SECTION 151 OFFICER DECLARATION

As Section 151 Officer for Norfolk County Council I declare that the scheme cost estimates quoted in this bid are accurate to the best of my knowledge and that Norfolk County Council has the intention and the means to deliver this scheme on the basis of its proposed funding contribution at section 4.3 (a) above, as well as meeting any ongoing revenue requirements on the understanding that no further increase in DfT funding will be considered beyond the maximum contribution requested at 4.3 (c) (including if third party contributions should no longer be available).

Name: Paul Brittain	Signed:

SECTION 1: THE SCHEME AS PREVIOUSLY CONFIGURED

i.e. BEFORE 10 JUNE 2010

This section should EITHER describe the scheme as approved at Programme Entry OR as submitted in a business case bid for Programme Entry OR on the latest design on which the last QMR submitted to the Department was based.

Note: this information should be consistent with what was included in previous EoI with any differences explained.

Date of Programme Entry or PE Bid or last QMR Submission (where applicable)	PE 16 December 2009 (letter confirmation from DfT 8 Feb 2010)
Estimated total scheme cost (inclusive of eligible preparatory costs)	£106.3m
DfT contribution	£67.5m
Local Authority Contribution (excluding the costs of any Part 1 Claims that you may have included at this time) (NOTE: Total reduced due to Part 1 Claims)	£16.8m
Third party contribution (Includes £1m Growth Point and £21m CIF allocation)	£22.0m

1.1 Brief description of the scheme as previously configured *This should clearly state the scope of the scheme and describe all of its key components.*

The Norwich Northern Distributor Road (NDR), as part of the Norwich Area Transportation Strategy (NATS), is crucial to delivering housing and jobs growth in Norwich. It is the key piece of infrastructure necessary to enable the overall delivery of the 37,000 houses and 27,000 jobs identified in the Joint Core Strategy (JCS). It forms part of a package to deliver sustainable transport measures including bus rapid transit, walking and cycling measures, and a comprehensive transport plan aimed to boost and sustain the city centre economy.

The NDR scheme is a dual carriageway distributor road from the A47 at Postwick to the A140 junction near Norwich International Airport to the north of the city. It is 14km in length and includes at-grade roundabout junctions at intersections with existing radial routes (see attached plan Ref 04). The NDR scheme has an excellent overall value for money **BCR of 7.42** (refer Section 3.2) which categorises it as **Very High** value for money.

The government funding being sought for the scheme, totalling £86.49m (£67.49 DfT and £19.00m CLG), will provide the potential to unlock growth that as a conservative estimate amounts to **£1.3bn** of additional investment in the Norfolk economy.

At Postwick the NDR will link with the A47 and wider Trunk Road network via a significant junction upgrade (called Postwick Hub). This includes dual carriageway roads linking to the existing highway network and facilitating access to a new business park development and the extension of an existing business park. This junction upgrade has been awarded CIF growth point funding, which is currently held by DfT pending resolution of the Development Pool process.

In addition to the distributor road, the following elements will be delivered, which are also part of NATS and immediately lock-in the benefits of the NDR and Postwick Hub:

- A range of city centre measures to provide immediate benefits for walkers, cyclists and bus users/operators
- Other linked highway improvements to improve access
- Traffic speed reduction measures in the northern suburbs to ensure appropriate use of the highway network and improve local communities
- A £2m contribution towards Postwick Park and Ride expansion

As well as the economic cost of the congestion in northern Norwich, the NDR also delivers local environmental benefits to those suburbs and communities that it relieves.

The NDR is key to future economic growth in the Norwich area and protecting the historic city centre environment. It opens up strategic employment sites at Norwich International Airport, Rackheath and Broadland Business Park – facilitating the land to provide for over 12,000 jobs and enables the delivery of up to 10,000 new homes (as set out in the JCS). It will also provide greatly improved access for north east Norfolk to the strategic road network, taking full advantage of the forthcoming dualling of the A11.

In doing so, the NDR will provide improved accessibility from North Norfolk to employment opportunities at Norwich Research Park and the Norfolk and Norwich University Hospital as well as those in Broadland.

1.2 What are/were the primary objectives of the scheme?

Please limit this to the primary objectives (ideally no more than 3) the problems to which this scheme is the solution. If the primary objectives have changed please explain why. Do not include secondary objectives i.e. things to which the scheme will contribute.

The strategic case for the NDR scheme has been set out in an updated document (see attached Ref 01) which clearly defines the objectives of the NDR. These can be grouped under the following three primary objectives, which reflect the Governments recently published white paper 'Creating Growth, Cutting Carbon' published in January 2011:

1. **To deliver economic growth.** 10,000 new homes and 12,000 new jobs are directly dependent on the implementation of Postwick Hub and the NDR. The NDR will directly link strategic employment sites, Norwich International Airport and major housing growth areas to the trunk road. The new road will provide strategic access to large parts of north and north-east Norfolk, including its essential tourism centres directly facilitating access to employment as well as improving employers' access to labour markets.
2. **To provide sustainable transport benefits.** The NDR is vital to enable the delivery of the full package of NATS measures including bus rapid transit, walking and cycling measures and improvements within the city centre. Without the NDR and this package of measures the transport system in Norwich does not have the capacity to allow the housing and jobs growth and would become a barrier to delivering the JCS.

3. **To improve the quality of life for communities.** Traffic is known to be using inappropriate routes through housing areas and villages in northern areas of Norwich to avoid traffic delays on radial roads and the inner and outer ring roads. This is diminishing the quality of life for residents by increasing the potential for accidents, noise and pollution, reducing their likelihood of walking or cycling and creating severance within their communities. The NDR improves the quality of the environment for those living, working and visiting Norwich city centre, by removing cross-city traffic and directly enabling the significant walking, cycling and bus transport enhancements promoted in NATS.

The strategic case for the NDR concludes that the scheme is an essential piece of infrastructure to facilitate the Joint Core Strategy (JCS) for the Norwich area which has been examined in a public forum and found to be a sound planning strategy. Implementation of the JCS will deliver 27,000 new jobs and 37,000 new homes up to 2026.

The identified problems that the road and the overall NATS strategy address are:

- Traffic congestion causing delay to public transport services
- Constraints on allocated employment development sites
- Transport issues inhibiting business growth
- Providing headroom to accommodate planned growth

1.3 Please describe the process by which this scheme came to be the preferred option for meeting those objectives including reasons why alternatives were not progressed.

This may simply be an extract from what has already been described in previous Major Scheme Business Cases. However please take the opportunity to expand on that previous material as necessary.

An extract from the Major Scheme Business Case (originally submitted in July 2008) provides a summary of the process completed to develop the preferred option. Details from the MSBC Executive Summary are:

“Proposals for an NDR first came to prominence as an issue for the Norwich area in the 1991 NATS. The preferred strategy produced by consultants after a 2 year study recommended inclusion of an NDR scheme but the scheme was not included as part of the adopted strategy pending further investigation into its impact. Reviews of the NATS strategy in 1994 and 1997 maintained this position until NATS 4 strategy was reviewed and adopted in 2004. The NDR scheme was included in NATS 4 as a means of achieving other elements of the strategy, which had not been successfully achieved under NATS 3.

The inclusion of the NDR scheme took place after a rigorous process of review, following webTAG guidance, which involved the appraisal of six strategic options including a number based around public transport. The preferred strategy option including the NDR scheme was deemed to best meet the aims and objectives of the NATS strategy, and following extensive public consultation, was adopted by the County Council in October 2004.

The public consultation for the NATS Review invited consultees to comment on whether an NDR scheme should be part of the strategy. To help consultees

come to a view, a number of route corridors were included in the consultation document – 3 to the east and 4 to the west. Whilst there was strong support for an NDR scheme (78% of respondents) there was no strong preference on which route should be preferred and a large number of variations were proposed.

Having adopted the preferred NATS strategy, the County Council then undertook a Stage 2 Assessment of the route alternatives prior to carrying out an extensive public consultation on a number of possible routes. That consultation resulted in strong environmental concerns being expressed about the impact of a new road across the River Wensum Special Area of Conservation (SAC) to which the County Council responded by carrying out further assessment beyond a Stage 2 level to ascertain whether the impact on the SAC could be mitigated. The conclusion was that it could not be demonstrated that the new road would not affect the integrity of the SAC.

Alongside this, traffic modelling indicated that a road starting at the A1067 in the west rather than the A47 gave significant benefits and delivered most of the objectives of the NDR scheme and these were key factors in the decision to choose the preferred route as now proposed.

Removing motorised through traffic from the city centre is an essential element of NATS in support of policies within the City of Norwich Local Plan and City Centre Spatial Strategy to make the city centre a more liveable space. The construction of the NDR scheme will enable measures to be implemented to deter through traffic from travelling via the city centre, creating a safer and more environmentally attractive environment for residents, pedestrians and cyclists.”

Between the submission of the major scheme business case (MSBC) for the NDR in July 2008 and confirmation of Programme Entry in December 2009, there was significant dialogue with DfT and a considerable number of further sensitivity tests were completed to demonstrate the robustness of the assessment work. In summary this work included:

- Core Scenario (updating MSBC data and Traffic Forecast information)
- Dependent Development
- Part NDR from A140 to A47
- Further Tests 2 to 6 (varying growth rates and other assumptions)

The options considered in the original MSBC and the additional assessment work completed prior to the confirmation of Programme Entry, have confirmed that the preferred option provides the best solution to meet the objectives.

The updated strategic case also concludes that the preferred dual carriageway option for the NDR scheme best meets the Councils’ and wider stakeholder objectives.

During 2009 and 2010 the NDR was included as part of a detailed development of the NATS Implementation Plan to deliver the significant changes needed to improve transport in and around Norwich. The consultation, level of support and adoption of the Plan is discussed in more detail in section 5 of this bid.

The NDR was also included as part of an Examination in Public for the Joint Core Strategy for the Norwich Policy Area towards the end of 2010. It is worth noting the JCS Inspectors' found the proposals to be 'sound' and specifically commented that they are not convinced that a non-NDR package of transport interventions would be a realistic solution in terms of the necessary infrastructure to support the planned growth in the Norwich area.

1.4 What was the last total estimated cost of the scheme as previously configured including where changed since the award of Programme Entry?

Please provide the latest cost of the scheme with a summary and where, appropriate, an explanation of the key changes from the previous cost breakdown. Please use this section to identify any cost savings that you have already made since the award of Programme Entry. Figures should be outturn costs. Please adjust to exclude the costs of any Part 1 Claims that you may have included at this time.

£m	Pre 2011/12	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17	2017/18	2018/19	Total	%
LA contribution	7.3		0.956	1.486	3.610	3.079	2.369			18.8	16.3
Third Party contribution	1.6	0.7	1.1	1.1						4.5	3.9
CIF funding allocation			11.471	10.428						21.9	18.9
DfT funding requested					14.810	30.872	24.718			70.4	60.9
Annual Totals	8.9	0.7	13.527	13.014	18.420	33.951	27.087			115.6	100.0

Key changes to the cost breakdown since the original Programme Entry (December 2009) compared with the figures set out in the table above are:

- The scheme includes the Postwick Park and Ride extension access improvements (which form an essential part of the Postwick Hub). It also includes funding for City Centre and Traffic Speed reduction measures which were not included in the original scheme approved for Programme Entry.
- The scheme has effectively been delayed by 2 years. The original intention was to commence with the construction of Postwick Hub during 2010, however this has not been possible due to the spending review and the instruction that Public Inquiries would not be commenced by the Secretary of State. The intention now is to commence Postwick in 2012.
- This 2 year delay has therefore generated additional inflationary pressures which have been factored into the figures above. This assumes an inflation increase of approximately £5m for the two years, reflecting a range of construction sector increases, but also considering the financial climate from 2010 to 2012.

1.5 Please describe any developments (such as housing) linked with the scheme as described above and explain any changes impacting on these developments (eg policy changes such as housing allocations, changes to redevelopment plans)?

This should explain any links that the planned scheme had to major developments and provide details of changes to these plans such as through changes in policy relating to housing, changes to developer plans etc

The Joint Core Strategy (adopted March 2011)

The Joint Core Strategy for Broadland, Norwich and South Norfolk has been developed by Broadland District Council, Norwich City Council and South Norfolk Council, working together with Norfolk County Council as the Greater Norwich Development Partnership.

The JCS sets out the required levels of growth and its location in terms of both housing (37,000 properties) and employment (27,000 jobs) in and around Norwich. The Inspectors for the JCS provided their findings in a final report published in mid-February 2011 and considered the JCS to be sound (see Inspectors Report February 2011 – Ref 08).

Paragraph 9 of the Inspectors' Report says, "The authorities have seized the initiative, risen to the challenges presented by the demographic forecasts for the area and made a proactive response which recognises the scale of the issues. The JCS sets out a sound long-term strategy for this growth and the GNDP position on this issue is worthy of support."

The largest concentration of growth in the JCS is within the Old Catton, Sprowston, Rackheath and Thorpe St Andrew Growth Triangle. The NDR is integral and essential to the growth area. Development within the growth area will include 7,000 dwellings (with an additional 3,000 after 2026) and expansion at strategic employment areas as set out in the table below. The Growth Triangle is also adjacent to Norwich International Airport and associated employment growth. Paragraph 72 of the Inspectors Report concludes that "there are strong reasons to support the selection of this area as a location for a major urban extension Concentrating the development at this major growth location is the most effective way of maximising its contribution to the [Norwich Policy Areas] sustainability and providing infrastructure economically".

Throughout the process there has been ongoing dialogue with developers who are keen to ensure that the housing and employment growth is delivered. Whilst the current economic climate is very challenging, the JCS spans a period of 15 years (ie to 2026) and sets out possible further growth beyond that period (to 2031). The need for the NDR as a key part of NATS must therefore be seen in the context of a much longer timescale that will extend beyond the immediate financial difficulties.

The JCS identifies the NDR and Postwick Hub as essential elements of transport infrastructure. Without them there are limited levels of housing and employment growth that are possible in the north and east of Norwich, but with them up to 10,000 homes and significant employment can be delivered. The following table sets out the interim scales of development identified in the JCS that are released by Postwick Hub and completion of the NDR.

Planned and Committed Development Dependencies

	Housing	Employment Land	Estimated jobs
Do Nothing	200 exemplar at Rackheath Existing commitments of 1400 houses	New and existing allocations constrained	
Postwick Hub	At least 1600 dwellings	Release development of 15Ha including allocation at Broadland Business Park	1800
		New allocation of 25ha including approximately 50,000m ² B1 adjacent to Broadland Business Park	3200
NDR	A further 8,200 dwellings	New employment allocation of 25Ha at Rackheath	3300
		New employment allocation 30Ha at Norwich International Airport	3900
Totals	11,400	95Ha	12,200

The above does not include additional jobs that can be expected from intensification on existing sites, or in existing businesses throughout the northern suburbs and fringes as a result of enhanced access.

In addition to the longer term jobs created from new business development areas, there are additional jobs associated with the construction of Postwick Hub and the NDR. These have been set out by the already appointed contractor, Birse Civils Ltd, as up to 400 jobs for residents and businesses within the locality of the scheme. This represents 80% of the total staff employed on the scheme.

There will also be significant job creation in the construction of housing, commercial development, services and infrastructure such as transport and utilities necessary for supporting growth.

Alongside the county's then economic partnership, Shaping Norfolk's Future, and following widespread consultation with business, the GNDP authorities adopted the Greater Norwich Economic Strategy (GNES) in 2009. The GNES supporting action plan includes delivery of the NDR as a critical element.

Postwick Hub

Postwick Hub (promoted by the County Council) and the associated Broadland Gate Business Park Development (promoted by a private sector developer partner) has planning consent and is effectively ready to start construction. This releases 25 hectares of employment land.

Linked to this, another Planning Application, 'Brook Farm', also has a resolution to grant permission for 600 houses and Broadland Business Park Phase 2 (a further 15 hectares). Both of these are within the Growth Triangle and dependent, by planning condition, on the Postwick Hub trunk road junction improvement.

The overall scale of development that is released by the Postwick Hub improvements are to be explored in more detail through the Area Action Plan for the Growth Triangle being prepared by Broadland District Council. The GNDP has also initiated a Postwick Developer Forum to further consider the scale of growth that can be delivered by the Postwick Hub junction improvement.

SECTION 2: REVISED SCHEME PROPOSAL

This section should describe the changes you are proposing to make for the purposes of your Best and Final Funding Bid.

2.1 Are you proposing any changes of scope from the scheme as described in Section 1? *If yes, please describe in detail the changes you are proposing. Please also attach explanatory maps, diagrams etc. as appropriate.*

The changes to the scope from scheme as previously configured are:

a) Postwick Hub with inclusion of P&R entrance arrangements

Postwick Hub has previously received funding as a stand alone project that delivers immediate economic growth potential. Included as part of the original scheme was an extension to the existing Park and Ride site. It is proposed to amend the scope of this to reduce the initial demand on funding the junction and park and ride expansion. The details of what is to be included are shown on the plan attached (Ref 40). This shows the proposed highway related improvements associated with the Postwick Hub and P&R access. The delivery of the increased P&R parking facilities will follow at a later date (currently projected to be 2015).

b) Detailed design scope changes

The detailed design for the NDR is well advanced and this has enabled a value engineering review with the contractor to assess potential changes in scope that deliver cost savings. The outcome of this work has identified the following main proposals:

- Reductions in carriageway pavement widths.
- Reduction in the design life of the carriageway pavement and changes to the specification of materials being used.
- Removal of previously included segregated left turn lanes on the roundabout junctions.
- Drainage design reductions in scope and detailed amendments.
- The removal of streetlighting, particularly at the roundabout junctions (except the A140).

c) Redesign of A140 junction

The A140 junction has been completely redesigned following the DfT Programme Entry announcement of only providing funding to this point. It has changed from a previous 'grade separated' junction to an 'at-grade' solution. Details are provided on plan Ref 06.

The redesign maintains the potential for the County Council to continue to deliver the section of the NDR from the A140 junction to the A1067 as a further phase of the project. This junction design is also capable of accommodating future business park development, associated with the airport, which has already been detailed in section 1 above.

Savings associated with these scope changes are set out in section 2.3 below.

2.2 What, if any, additional changes of scope have you ruled out for the purposes of your Best and Final Funding Bid? Please give reasons.

Single Carriageway NDR

A single carriageway proposed from the Postwick Hub junction (at the A47) to the A140. This does not provide for the potential of the wider NATS Implementation Plan and cater for the extent of growth set out in the JCS. As set out in other sections of this submission, the NDR is integral to unlocking the growth potential of the Greater Norwich area. A reduction to single carriageway compromises the ability to free up the roadspace to enable public transport, walking and cycling improvements in the city, and on the main approaches into the city.

Modelling carried out during the development of the NDR has shown that increasing the capacity of the NDR, makes it more effective in attracting trips off the existing unsuitable roads in the Northern Suburbs of Norwich. A single carriageway option is not effective in meeting this objective. The original MSBC submission included a low cost option which consisted of a single carriageway road. The MSBC Value for Money Case concluded that this option “performs poorly, failing to deliver journey time savings, due to the impacts of additional traffic using existing road links.”

Realignment of the NDR

A number of options were previously consulted and discounted during the original development of the NDR. Previous County Council Cabinet reports (see Ref 10 (7 March 2005) & Ref 11 (19 September 2005)) provide a summary of the extent of this work.

As part of the work completed in developing the NDR, the preferred route alignment was chosen on the basis of being able to accommodate most of the proposed housing growth areas (with the exception of the more recent Eco-Community development). The alignment also provides a less significant impact on the environment than the other options considered. This can also be seen from the Landscape Impact Assessment (see Ref 37) work completed as part of the BCR appraisal.

A change to the alignment of the NDR would also impact on the locational strategy adopted within the JCS.

Removal of the Plumstead Road intermediate NDR junction

This option was considered as it could have removed a roundabout from the NDR, a short length of link road and a small connecting roundabout on Plumstead Road. It was considered possible depending on the delivery of the new Brook Farm link road that links Postwick junction to the Plumstead Road and will be delivered by that development (a planning application has already been approved for this development).

The assessment work completed for this has indicated that the traffic that would have used the Plumstead Road junction displaces onto inappropriate routes

through the existing villages of Salhouse and Rackheath. For this reason, it was considered that this option should not be considered further at this stage.

Reduction of speed limit

This was considered in order to assess whether the design standards could be reviewed to reduce the overall costs of the scheme. However a brief assessment highlighted that there are only likely to be minimal reductions in the scheme construction costs as there is a need to continue to provide a dual carriageway, with the associated design and safety standards.

In addition, reductions in the scheme benefits (due to increased journey time) would outweigh any minimal savings in construction costs. There are also concerns about the ability to enforce speed limits and the public acceptance of lower speed limits on a new dual carriageway.

Three-lane carriageway instead of dual carriageway

This option was suggested as an alternative to a single carriageway. However experience of these roads in Norfolk has been that they generate higher accident rates and Norfolk has an outstanding record in terms of its casualty reduction targets and achievements. It is not therefore considered appropriate to introduce a road standard that is known to have a poor accident safety record.

Within Norfolk, as part of its long standing efforts to reduce highway casualties, existing three-lane carriageways are being removed.

Signal junction control instead of roundabouts

In order to reduce the overall footprint of junctions and their associated construction and land costs, an option to use traffic signals has been considered. This has been rejected due to the potential reductions in junction capacity, the off-peak impact to traffic flows, the higher ongoing revenue costs associated with operating and maintaining the signals (compared with roundabouts) and the reduction in safety and likelihood of higher accident rates at the junctions.

Reducing the junction designs to smaller roundabouts

All intermediate junctions on the NDR are already 'at-grade' and have been designed with minimal footprints. The potential to reduce these further is therefore limited. Any further reduction would result in insufficient highway capacity as the junctions are already designed to an optimum.

Review of environmental mitigation

Significant value engineering has already been completed on the project and further reductions in the level of environmental mitigation would compromise the work already completed with statutory bodies in developing the proposals currently set out. It would generate too much risk through the planning process if the scope of mitigation was reduced any further.

More phasing of the construction of the NDR

The potential to deliver the NDR in phases has been considered. We have set out that the Postwick Hub can be delivered as a stand alone scheme ahead of the rest of the NDR because of the immediate benefits it brings in terms of unlocking employment and housing growth (as set out in the JCS).

Further phasing of elements of the NDR has also been reviewed, however it is clear from discussions with our already appointed contractor that the cost of delivering the NDR in a series of phases gets more and more inefficient as the number of phases increases. For this reason, when trying to keep costs to a minimum, it has been considered that proposing phasing as part of this submission is fundamentally unsound.

Use of tolling on the NDR

This has been considered as part of a broad overview of options. In terms of the number of intermediate junctions necessary to ensure the road operates as a distributor, the potential for tolling is not considered viable.

The cost of implementing a suitable tolling arrangement, administering its operation and the likely detrimental impact on the number of people using the road would all conspire to prevent it from offering a sound business case. There are also a high number of lower standard roads that create a network of alternative routes, which drivers may continue to be inclined to use, which is a key element that the NDR is intended to resolve.

2.3 Whether or not you are proposing a change of scope, please identify any savings that have been made to the total cost of the scheme, for example through value engineering.

Please provide details with a summary and explanation of the further savings beyond those already identified at 2.1 above or, if no scope changes are proposed, with reference to the cost breakdown provided in the latest cost estimate at 1.4 above.

We have made total scheme savings of **£5.1m** in the funding requested from DfT as part of this bid and these are set out below in the same format as the details provided in section 2.1:

a) Postwick Hub with inclusion of P&R entrance arrangements

In relation to the previously allocated £21m CIF funding from CLG, now held by DfT, we have reviewed the timing of the works to expand the existing Park and Ride site. This means that £2m of the £21m is not required and therefore the County Council is prepared to remove the need for this funding as part of the overall CIF project and will finance the Park and Ride works at a later date. This is expected to be between 2015 and 2020 when Park and Ride demand increases again to a level at which further parking is required.

This provides a reduction in requested funding from CLG via DfT of £2.0m.

b) Detailed design scope changes

The NDR has been developed over a number of years and this work has been completed in recent years with the appointed contractor (Birse Civils Ltd) working with the design team through Early Contractor Involvement.

This has generated savings over recent years that have enabled the scheme to stay within budget, taking into account annual inflationary increases. Therefore since Programme Entry additional significant savings have proved difficult to realise. However, a further detailed VE exercise has been completed as part of the work to develop this bid proposal. The identified savings are summarised below.

Reduced carriageway pavement width and reduced design life of the carriageway pavement, including changes to the specification of materials being used – saving £1.4m.

Removal of segregated left turn lanes at roundabout junctions – saving £0.2m (see plan Ref 05).

Reduced scope and detail amendments to the drainage design – saving £0.4m.
The removal of streetlighting – saving £0.5m.

Total additional savings from this latest VE work therefore equate to £2.5m.

c) Redesign of A140 junction

The A140 junction was previously designed as a grade separated junction to minimise the conflicting traffic flows from the A140 with the NDR, which was set out in the MSBC submission continuing to the A1067. The Programme Entry letter provided by DfT in February 2010 (see Ref 13), provided funding on the basis of the scheme stopping at the A140 and required a review of the junction design.

As part of the updated work associated with this submission, the A140 junction has been reduced to a large at-grade roundabout which has enabled a review of the relative costs of both junction designs. Whilst there has been a removal of bridge structures, there has been an increase in the overall scale of the at-grade junction.

This has resulted in a net saving of £0.6m.

2.4 Please provide separate details of any further changes you are proposing to the scheme from that submitted in January 2011.

Alternative proposals were appraised in significant detail as part of the original MSBC submission and these were tested further as part of the sensitivity analysis requested by DfT prior to Programme Entry being granted in December 2009. In view of this, and following an endorsement of the JCS by the Planning Inspectorate following the Examination in Public during 2010, it is considered that the optimum and best solution that achieves the essential outcomes has been thoroughly developed and tested. Therefore, no further changes have been identified.

2.5 What is your latest assessment of the cost, feasibility and value for money of any alternatives to the proposed scheme?

This should include any previous options subsequently discarded and / or those proposed by third parties. Please explain why this / these options have not been progressed. Please detail any elements that have been included in your proposed scheme. Please make reference to any material differences with the preferred scheme in costs or benefits such as carbon impacts.

The NDR

Prior to the submission of the NDR MSBC in 2008, an options assessment was completed for NATS in 2005. The options assessment report (see Ref 15) concluded that “The assessment indicates that the strategy options including the NDR and complementary transport measures give the most economic benefit...”

In addition, work completed during the development of route options for the NDR showed that there was greater public support for the route alignment that formed the basis of the MSBC submission from the A47 east of Norwich to the A140. This route received 50% more overall votes than the next nearest option. Details are set out in the 19 September 2005 Cabinet report (see Ref 11).

The original 2008 MSBC submission (Ref 14) also included options assessments. The Executive Summary concluded that “The analysis indicates that the proposed scheme performs significantly better than the other options including the public transport option, in benefit to cost terms and operational and safety terms.”

Extensive further work considering options in more detail was also completed at the request of DfT prior to Programme Entry being granted for the NDR in December 2009.

The Core Scenario (the defined scheme) at that stage was the NDR from the A47 at Postwick to the A1067. This was the basis of the original 2008 MSBC, however during the assessment the County Council were requested to also develop an option for the NDR that extended only as far as the A140 junction. This ‘part NDR’ option had a lower BCR of 4.6, compared with the previous Core Scenario, which was 6.1.

Further sensitivity tests were also undertaken to review the scheme as part of the programme entry analysis. Details are set out below.

Extract from ‘NDR Sensitivity Tests for DfT - Tests 2-6 Main Report – Volume 1’

Economic assessment results of previous sensitivity tests are as follows:-

Sensitivity Test Number	Scenario	Benefit / Cost Ratio (BCR)	Scenario	Benefit / Cost Ratio (BCR)
1	Core Scenario	6.1	-	-
2	Test 2 Pessimistic Local Development	6.1	-	-
3	Test 3A Low Growth	4.5	Test 3B High Growth	8.2

4	Test 4A Lower Trip Rates	6.1	Test 4B Higher Trip Rates	6.2
5	Test 5A Core Scenario without City Centre measures	8.6	Test 5B Core Scenario without any complementary measures	8.9
6	Test 6 Varied Parameters	6.6	-	-

The previous Core Scenario has a positive Cost Benefit Ratio (BCR) of 6.1 which categorises the scheme as “Very High Value for Money” in accordance with the DfT’s current Value for Money guidance. The BCRs of Tests 2 to 6 range from 4.5 to 8.9, confirming that the Very High category is appropriate. The results of the sensitivity tests carried out as part of the current bid process are set out in Sensitivity Tests Main Report (Ref 30)

In addition to the sensitivity work set out above, the PT option in the MSBC was also analysed in more detail. Reports were submitted to DfT (see reports – Ref 16, 17, 18 & 19) and these summarised that the PT option would need either unrealistic amounts of subsidy, or unrealistic increases in patronage simply to achieve BCRs of 1.5, which is significantly less than the Core Scenario and Part NDR set out above.

The NDR, as proposed, has been through an extensive Examination in Public as part of the JCS process and the Inspectors found in favour of the proposals as presented.

The Postwick Hub

This scheme has been developed following analysis of 15 options, with a range of sub-options that total 39 variants. The selected option is the only one that has been developed that has met with the scrutiny and therefore been approved by the Highways Agency. No other options have been presented and tested in any detail such that they satisfy the requirements of the Highways Agency (HA).

As part of the analysis of the NDR prior to it receiving Programme Entry, the DfT requested a report to be completed independently by Highways Agency to review the Postwick Hub junction design and determine whether a more cost effective solution was possible. This included a review of alternative suggestions and also included a review by HA of a large oval roundabout junction. They concluded that whatever the proposals are for the junction it would require a junction on the scale of Postwick Hub and any alternative, if developed, would need to be of a similar scale and cost.

At the JCS examination in public, a landowner put forward sketches of an alternative layout for improvement of Postwick (see Ref 20). It was suggested that the proposal was a low cost alternative but no supporting technical information was supplied. However based on knowledge of the design constraints a high level assessment of the layout was carried out. The County Council’s assessment of the proposal highlighted a number of serious concerns. These included the designs apparent lack of ability to ensure free flow and safety on the A47 and the need to acquire 3rd party land for its delivery.

In addition to the above, Thorpe St Andrew Town Council have raised their opposition to the closure of the A47 diverge slip road proposed as part of the Postwick Hub junction improvement. An alternative sketch proposal has been suggested by a local Town Councillor to avoid the need to close the slip road. This alternative proposal would not meet design safety standards required by Highways Agency (HA). This was confirmed by a HA representative at the Examination in Public of the Joint Core Strategy.

The design proposal presented by the County Council takes into account significant constraints at the junction and also provides a solution that provides for a new business park and the associated employment benefits. It also provides the necessary link to the NDR with only minor modification, which makes it a more cost effective solution.

No other viable alternatives have been provided by others with sufficient detail that can be, or have been, tested in any detail to satisfy the Highways Agency.

SECTION 3: IMPACT OF CHANGES PROPOSED AND DELIVERY OF THE SCHEME

This section should describe the impact of the changes you are proposing in Section 2 above compared to the previously configured scheme as described in Section 1

3.1 What impact, if any, would the proposed changes have upon achievement of your primary objectives? *This should refer to the scheme as identified in section 2.1*

There is no significant impact on the primary objectives of the scheme due to the proposed changes. The details are set out below, again following the format set out in section 2.1:

a) Postwick Hub with inclusion of P&R entrance arrangements

The phasing of the delivery has a benefit to the ability to deliver the primary objectives. If Postwick Hub can be delivered during 2012 and opened in 2013 it unlocks potential employment and housing growth, thereby realising immediate benefits to the economy and so directly contributing to the primary objective of economic growth.

This early delivery of Postwick Hub also enables the new Broadland Gate development and a further phase of the existing Broadland Business Park to commence, both of which will contribute via Section 106 payments to public transport infrastructure. Broadland Gate alone has a S.106 contribution associated with the development of £2m towards public transport.

b) Detailed design scope changes

These changes are minimal in terms of their overall impact on the primary objectives. They do reduce the initial costs of the project but will bring about earlier maintenance interventions in relation to the pavement design life. This is something that the County Council will build into its future maintenance regimes, but some of this cost will be offset due to savings in not maintaining street lighting and reduced revenue costs.

c) Redesign of A140 junction

Changes to the A140 junction have been developed which have enabled the junction to be at-grade instead of the previously proposed grade separated. The design is such that it can provide sufficient capacity to enable a future extension from the A140 to the A1067 (part of the original scheme proposal in the 2008 MSBC).

The A140 design is also now consistent with all other junctions along the NDR (ie at-grade), which is a potential benefit for driver perception. It is also in keeping with the other junctions in that it is not designed with reserves of capacity and is therefore the optimum design necessary to find a balance in the longer term between people using their cars and changing to public transport. In re-appraising the junction design, we are also confident that it also has the potential to provide the necessary access capacity for an adjacent site allocated as a new business park. This will assist in facilitating future employment growth and provides a benefit

to the primary objectives in this regard.

3.2 Please provide a short description of your assessment of the value for money of the revised scheme including your estimate of the Benefit Cost Ratio.

This should cover both monetised and non-monetised costs and benefits and should briefly explain the reasons for significant changes since your most recent Business Case submitted to the Department. The full assessment, as set out in the Value For Money guidance should be provided as an Appendix. Valuation of any dependent development should be reported here, separately from the central value for money evidence and supporting evidence, and a full description of the approach taken should be included in the Appendix.

A summary of the assessment of value for money is set out in the table below, which updates the assessment provided by DfT as part of their review of the NDR Benefit Cost Ratio provided ahead of the Development Pool process.

	Benefits (£000s)	Costs (£000s)
TUBA	386,397	70,883
Wider Impacts	72,946	
Reliability	24,569	
Accidents	36,697	
Landscape	-12,105	
Noise	16,540	
Air Quality	812	
Total	525,856	70,883

All values in 2002 prices discounted to 2002.

Adjusted BCR	7.42
VFM category	Very High

Notes:

TUBA	PVB from TUBA, includes consumer and business impacts, greenhouse gases and indirect tax revenues. The corresponding unadjusted Transport User Benefit BCR of 5.45 obtained directly from TUBA is well above the value of 4 above which the DfT classify schemes as Very High value for money.
Wider Impacts	Assessment carried using WITA program.
Reliability	Assessment carried out using methodologies set out in WebTAG unit 3.5.7.
Accidents	Accidents benefits have been calculated using COBA
Landscape	Landscape character is mainly open arable farmland, with pockets of more enclosed well wooded farmland resulting from the presence of former estates, particularly Beeston Park and Rackheath Hall. These give rise to some areas of good landscape quality (although the more attractive parkland areas are avoided by the route) and elsewhere a combination of earth shaping and planting would mitigate the impacts.

Noise	Noise benefits of the NNDR scheme were calculated using the methodologies set out in WebTAG 3.3.2 (April 2011)
Air Quality	Air Quality benefits were calculated using WebTAG unit 3.3.3 (April 2011)
Modelling assessment	The model is a production-attraction variable demand transport model which fully aligns with Departmental guidance. The model includes variable demand responses which would be expected for a scheme of this size.
Cost assessment	The cost details in the table above have been amended from previous submissions to allow for : <ul style="list-style-type: none"> - Reduced level of optimism bias (from 25% to 20%) - Revised spend profile - Adjustment to assessment of construction inflation (was previously ahead of RPI, now this effect has reversed).

As requested, the full assessment in accordance with the Value for Money guidance is provided at document Ref 02. In summary, the key Value for Money benefits are:

- ✓ **Improved accessibility and connectivity for business**, aiding economic growth and in particular creation of new private sector jobs in emerging advanced engineering and other value added sectors.
- ✓ **Enable delivery of the Joint Core Strategy** which is envisaged to deliver 37,000 new homes and 27,000 new jobs over the plan period through to 2026.
- ✓ **Reduction in congestion on key routes within Norwich** promoting future sustainable transport provision, in particular serving new housing and employment growth areas.
- ✓ **Enhancement and protection of the historic environment and commercial vitality of the city centre** by facilitating implementation of a broad range of traffic management measures which remove cross-city traffic.
- ✓ **Improvement in the quality of life for communities** by removing traffic known to be using inappropriate routes through housing areas and villages in northern areas of Norwich.

3.3 What impact, if any, would the proposed changes have on the statutory orders or permissions required or the timetable for obtaining these?

For example would fresh planning consent need to be sought?

There are no impacts to the statutory orders for the scheme. These can be dealt with as two distinct elements, the Postwick Hub and the NDR:

Postwick Hub

Postwick Hub and the Park and Ride have been through their necessary planning processes. The changes in scope set out in section 2 do not affect these permissions.

The Side Roads Order for Postwick Hub is subject to a Public Inquiry, however the changes in scope to the delivery of the Park and Ride site, set out previously in section 2.1 (item a), do not affect this. The County Council has been working with the Highways Agency (the promoters of the Orders for Postwick Hub) and it is anticipated that the Public Inquiry process will be completed early in 2012. This will enable construction to commence as planned early in the 2012/13 financial year.

The changes proposed do not change the land required for the junction improvement, which has been secured by jointly working with a developer. There is no need for a Compulsory Purchase process and therefore no impact to this.

NDR

The timescales for the delivery of the NDR are set out in 3.7 below. This part of the project still has to go through its planning processes, CPO and SRO and any possible related Inquiries. The timescales set out are therefore realistic and represent our estimate of when this part of the scheme can be delivered. The proposed changes do not impact on these timescales.

3.4 What are the procurement arrangements for the revised scheme and what, if any, changes have been made from the arrangements or timetable proposed for the original scheme?

For example would any retendering be required? Have you supplied details of your procurement strategy and arrangements to the Department?

The County Council has already entered into a contract with Birse Civils Ltd, who have a proven track record in major highway infrastructure projects and are the preferred contractor for the forthcoming A11 dual carriageway contract for the Highways Agency.

The contract is structured around two stages, the first incorporating input to the design process (Early Contractor Involvement), with the second phase being construction, which has the flexibility to be delivered in stages. The contract is the industry best practice New Engineering Contract (NEC). It utilises Option C – Target Costing, which is developed during phase 1.

There is no need for further tendering processes to be completed and the input to the design process has enabled significant value engineering to be completed, as set out in earlier sections of this bid document.

The contract offers significant flexibility for the County Council, follows best practice and establishes a clear target cost for the works before any construction phases commence.

3.5 Please describe the internal / external expertise & skills that will be assigned to the project to allow for its effective delivery. *This should detail who / what roles will have overall responsibility for the project and what other skills will be available.*

The following table and details are an update from the original MSBC submission:

NDR Project Structure	Name(s)/ Team Leader
Portfolio Holder	Cllr Graham Plant
Project Sponsor	Mike Jackson – Director (NCC)
Project Director/ Senior Responsible Officer	John Joyce – Assistant Director (NCC)
Inquiry Team	David Allfrey – Team Leader (NCC) Chris White – Transport/ Economics (MM) James Montgomery – Environmental Lead and Water Quality (MM) Max Forni – Noise (MM) David Boyland – Air Quality (MM) Ian Hesling-Gibson – Landscape and Townscape (MM) Mark Johnston – Ecology (MM) Nigel Page – Heritage and Archaeology (NAU) John Rhodes – Planning (RPS/Q) Iain Gilby – Solicitor (SS/PM) Heidi Slater – Solicitor (SS/PM) Anthony Porten QC – Legal Counsel Michael Bedford – Legal Counsel
Delivery Board	Mike Jackson (NCC) John Joyce (NCC) Tracy Jessop (NCC) Sandra Eastaugh (GNDD/JCS) Nick Osborne (Birse Civils Ltd) Ann Carruthers (NCC) John Birchall (NCC) David Allfrey (NCC) Gerry Kelly (MM)
Project Manager (including CDM Coordinator)	David Allfrey (NCC)
Deputy Project Manager (incl. Design Manager)	Mark Kemp (NCC)
Design Team	Mark Kemp (NCC) – Overall/ Highways Marcin Kurek (NCC) – Overall/ Highways Shaun Dean (NCC) – Bridges
Construction Supervision/ Contract Administration	Ian Taylor (NCC) – NEC Project Manager Tim Ellis (NCC) – Asst NEC Project Manager

MSBC Manager	David Allfrey (NCC)
Environmental Co-ordinator	Jacqueline Fookes (MM)
Contractor Team	Don Henry (BCL) – Project Director Richard Moore (BCL) – Project Manager Martin Pratt (BCL) – Finance Manager Nick Gibbins (BCL) – Programme Manager
Policy Manager	David Cumming (NCC)
Gateway Review	Angela Hutchings (LP)

NCC – Norfolk County Council

MM – Mott MacDonald

GNDP – Greater Norwich Development Partnership

BCL – Birse Civils Ltd

RPS/Q – RPS Planning and Development (via QUOD Planning)

SS – Shoosmiths/Pinsent Masons

NAU – Norfolk Archaeological Unit

LP – Local Partnerships

In addition to the above, the Joint Core Strategy team is available to advise the NCC team in delivering the project in the strategic context of the JCS. The team has experience of taking the JCS through an Examination in Public, which included working on specific detailed analysis of the NDR and Postwick Hub.

3.6 Please supply a note setting out the governance arrangements for the scheme. *This should also link roles and responsibilities with accountability and arrangements for Reviews as appropriate.*

Norfolk County Council has an excellent and proven track record for delivering major projects. The team is therefore more than capable of ensuring the delivery of this scheme and is rightly proud of its good reputation.

The scheme governance is set out in the original MSBC submission documents (Ref 14) in the ‘Delivery Case’ section 4.1. The ‘project management’ section of that document sets out that:

“ The NDR scheme is a large capital project with a high political profile and stakeholder interest. To properly meet the demands of such a prominent scheme a dedicated team has been identified and will report to the NDR Delivery Board (synonymous with Project Board in PRINCE2 methodology) as shown in Figure 4.1. The presence of a high level Sponsor’s Board ensures that the project sponsors (the DfT and Norfolk County Council through the Cabinet Member for Planning and Transportation) are kept involved in the development of this high profile project.”

Since the submission of that document, the key change is that the procurement process to appoint a main contractor has been completed, hence reference to procurement in figure 4.1 can be ignored.

Other changes to the team, as set out in section 4.2 of the MSBC document have been updated and are set out in section 3.5 above.

3.7 What is the estimated start and completion date of the scheme as now proposed, taking into account any of the impacts described above?

For the purposes of this question assume that decisions on BAFB will be made in December 2011 and that no DfT funding will be available before 2012/13. Please complete the list of milestones below adding any additional ones where appropriate and setting out separate start and completion dates where there are separate elements in the schemes. Please enter "n/a" if not applicable rather than deleting lines.

The dates set out below have been split into two phases for clarity and to indicate the readiness for construction of Postwick Hub.

The early construction of Postwick Hub (in 2012/13) directly facilitates the delivery of a minimum of 1600 new homes (as defined within the Joint Core Strategy) and employment at the new Broadland Gate Business Park and the expansion of the existing Broadland Business Park. In addition, there is immediate employment in delivering the construction work for the Postwick Hub and the associated housing and business park developments.

The timescales for the NDR assume that there will be a public inquiry into the planning process and/or CPO and SRO. They represent the longest necessary timescales to deliver the project, however in view implications to the available budget set out by DfT following the June submission, the County Council would welcome the opportunity to discuss these dates further with DfT if it assists in the overall assessment of the Development Pool.

Milestone	Expected Completion Date
<u>Postwick Hub</u>	
Approval of BAFB from DfT	December 2011
Statutory Orders (Side Road Orders) published	Autumn 2009
Planning Approval (reconfirmed)	August 2011
Public Inquiry Starts	January 2012
Confirmation of Side Road Orders	March 2012
Complete Procurement <i>(include separate elements if appropriate)</i>	n/a (Completed)
Agree works Target Cost	February 2012
Submit Full Approval application to DfT	March 2012
Work Starts on Site	May 2012
Work Completed	November 2013
Opening / commencement of operations <i>(including phases of opening as appropriate)</i>	November 2013
Milestone	Expected Completion Date
<u>NDR</u>	
Approval of BAFB from DfT	December 2011
Submit Planning Application	Autumn 2012
Determination of Planning Application	Winter 2012/13
Statutory Orders published	Winter 2012/13
Public Inquiry Starts	Summer 2013
Agree Target Cost	Autumn 2013
Confirmation of Orders	Spring 2014
Complete Procurement <i>(include separate elements if appropriate)</i>	n/a (Completed)
Submit Full Approval application to DfT	Summer 2014

Site Clearance Works/Mobilisation Start	Autumn/Winter 2014
Work Starts on Site	Spring 2015
Work Completed	Spring 2017
Opening / commencement of operations (including phases of opening as appropriate)	Spring 2017

3.8 What are the key risks to the delivery to this timetable, aside from the availability or otherwise of DfT funding?

Please list the biggest risks (ideally no more than three) that have a potentially significant impact on the timing of the scheme. For each risk please describe its likelihood, quantify the potential time delay, and explain how you are mitigating the risk including how risks are transferred as part of your procurement strategy?

Risk Register

The attached risk register (doc Ref 34) provides details of the range of project risks that the project team have identified. This has been developed as part of the project governance to ensure all risks are managed throughout the life of the project. The most pertinent risks identified in the risk register that are likely to affect the delivery timetable are:

- Postwick Hub – Potential for extended inputs to complete the Side Roads Order process, taking it beyond the programmed duration and therefore delaying the planned start of works.
- NDR – Potential for extended inputs required to complete the planning and statutory orders processes.

Whilst these are identified risks, we nevertheless consider that the quoted delivery dates provide for realistic periods to complete these processes.

3.9 Please indicate the level of allowance you have made within your own budgets to cover the cost of scheme evaluation including your initial estimates of the costs of:

- a) **full scheme impact evaluation**
- b) **pre and post scheme opening monitoring reports**

Please note that funding for scheme evaluation and monitoring will not be available from DfT.

The County Council has extensively monitored transport in and around Norwich over a number of years and the data has highlighted transport trends. Principally, the monitoring is focussed on two cordons around Norwich – the inner ring road and the outer ring road – on which we have counted the numbers of vehicles and cycles (and in the case of the inner ring road, pedestrians) crossing the cordons.

A review has recently been carried out to identify a monitoring programme that can be undertaken within tightened financial constraints. We have made an allowance in our budgets to continue the cordon counts on the Norwich inner and outer ring roads. We will be making use of new technology by using video monitoring to count vehicle numbers as part of an annual review. We will also supplement this with counts of pedestrians and cycles every two years.

We will also make use of data from other sources and publish monitoring information in an annually updated transport monitoring report. For Norwich, this

will include:

- Counts of traffic, cyclists and pedestrians crossing the inner and outer ring road cordons, as described above
- Cycle counts on six main off-road cycle routes (automatic counters, reported annually)
- Bus passenger counts (from operators' ticket sale information, reported annually)
- Rail patronage (from rail station ticket sales, Office of Rail Regulation, reported annually)
- Park and Ride patronage
- Bus reliability (from BusNet data – which currently shows that buses in the north of Norwich suffer greater delays than those in the south).

In addition to the above, the GNDP Partners will jointly produce annual monitoring reports for the Joint Core Strategy and the Greater Norwich Economic Strategy (GNES). Monitoring targets are set out in Appendix 8 of the JCS and in the “GNES Action Plan Performance Management Update”. These include (but are not limited to):

- Housing supply
- Affordable housing completions
- New business registrations
- New retail development
- Job creation

Collectively these existing, budgeted monitoring activities will enable a full evaluation of the impacts of the scheme as part of the authorities' normal working practices.

SECTION 4: FUNDING FOR REVISED SCHEME PROPOSAL

This section is to detail the cost, revenues and funding requirements for your revised proposal as described in Section 2 above. Please quote all amounts in £m to three decimal points (i.e. to the nearest £1000)

4.1 What is your estimate of the total outturn cost of the revised scheme? After taking into account all the proposed changes described in Section 2 above. Do not include any pre-Programme Entry costs. Please provide a breakdown of the total cost, split between different elements of the scheme and separately identify preliminaries, project management, risk and inflation. Please also provide your full cost breakdown as an annex.

£112.523m

(Cost break down included in attached MSBC Addendum report Ref 03)

Base Cost Summary

Base Costs	Value [£m]
Construction Cost	73.7
Land cost	9.0
Preparation Cost	4.4
Supervision	1.0
Base Cost Total	88.1

Construction Cost Breakdown

Element of construction cost	Value [£m]
Preliminaries	13.8
Site Clearance	1.4
Fencing	1.5
Safety Fencing	1.6
Drainage	4.6
Earthworks	9.1
Pavements	13.4
Kerbs and Footways	2.8
Traffic Signs and Road Markings	2.3
Lighting	1.1
Structures	10.2
Landscaping	2.4
Accommodation Works	2.9
Statutory Services	5.0
Environmental Mitigation	1.6
Construction Costs Total	73.7

Quantified Cost Estimate

Quantified Cost Estimate	Value [£m]
Preparatory Costs up to and including 2011/12	9.6
Base costs (incl. Eligible Preparation Costs)	88.1
Quantified Risk Assessment	7.7
Inflation at 2.0%	7.1
Total	112.5

<p>4.2 Please state what inflation assumptions you are using. <i>Inflation rates for different categories (e.g. general inflation, construction cost, operating cost) should be separately identified.</i></p> <p>BCIS and other relevant construction inflation indices show forecast construction inflation to be at a lower level than forecast background inflation from RPI over the 2011 to 2017 period (source: Table M3: Medium Term Forecasts for CPI and RPI, HM Treasury Document).</p>	<p>2% allowance for construction cost, land and preparation</p>
<p>4.3 Please provide a breakdown of the proposed funding sources for the scheme</p>	
<p>(a) Local Authority contribution <i>This needs to cover the difference between the total cost of the scheme as stated above and the total of the requested DfT and agreed third party contributions. It should include the LA costs incurred or expected to be incurred after Programme Entry excluding ineligible preparatory costs as defined by previous guidance. Where a local authority is promoting more than one scheme, please detail the level of contribution required if all schemes are successful as part of this funding process. Please do not include the cost of any Part 1 Claims.</i></p> <p>NOTE: The County Council Cabinet has agreed to underwrite the cost of the NDR to the A1067 – the scheme originally set out in the MSBC of 2008. The allocation shown here represents the pro-rata allocation of the County Council towards the cost of the NDR to the A140. It is essential to also allow an allocation to deliver the NDR from the A140 to the A1067 as this will also enable the delivery of the full scale of growth set out in the JCS and thereby releasing the full potential contribution from CIL.</p>	<p>£22.038m</p>
<p>(b) Agreed third party contributions <i>Please name each contributor on a separate line and provide evidence of agreement (e.g. a letter from the funder outlining the degree of commitment, timing for release of funds and any other conditions etc). Note: you will be required to underwrite all third party contributions should these not materialise.</i></p>	<p>£3.995m (Growth Point funding via GNDP)</p>
<p>(c) DfT funding requested <i>You are reminded that, as set out in the document “Investment in Local Major Transport Schemes” the risk layer cost sharing mechanism is being discontinued and the figure you enter here will, if accepted, be the maximum funding that DfT will provide for the scheme. If you wish eligible preparatory costs (as defined by previous guidance) to be paid these will need to be consolidated within this funding request.</i></p> <p>NOTE: The funding requested from DfT reflects a total contribution. The previous Programme Entry announcement included a provision from DfT for £67.490m plus an additional £5.69m allocated for</p>	<p>£67.490m (Previous Programme Entry allocation)</p> <p>£19.000m (CIF ringfenced allocation)</p>

additional risk layer (ARL) Total £73.159m. The bid is therefore removing this risk from DfT. Whilst this figure is not shown in the various funding details elsewhere in this report, this represents a potential further saving to DfT of £5.66m.

4.4 What is the estimated funding profile.

Assume that no DfT funding will be available before 2012/13. Please specify the third party contributor(s) and list each one (if more than one) on a separate line. Please assume that the DfT and LA contributions will be in the same proportion in each year from 2012/13 and provide an explanation if this is not the case. Although the total level of DfT funding will be fixed, profiles across years may be subject to further discussion and agreement. Please do not include the cost of any Part 1 Claims.

£m	Pre 2011/12	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17	2017/18	2018/19	Total	%
LA contribution	7.300		1.481	1.982	1.218	4.085	3.406	2.566		22.038	19.6
Third Party contribution - Growth Point	1.600	0.730	1.665							3.995	3.5
CIF funding allocation			10.000	9.000						19.000	16.9
DfT funding requested					9.442	31.655	26.393			67.490	60
TOTAL	8.900	0.730	13.146	10.982	10.660	35.740	29.799	2.566		112.523	100

4.5 If any DfT funding were available in 2011/12 would you be in a position to reach Full Approval and begin claiming such funding and if so how would your funding profile change?

(If appropriate please set out a funding profile similar to that in section 4.4)

We will be able to start construction of Postwick Hub during 2011/12, assuming the Side Roads Order (SRO) Public Inquiry (PI) is started and completed promptly. There are no statutory objections and the objections received are primarily related to planning matters. With the early completion of the SRO PI, we will be able to start the Postwick Hub junction construction works before the end of the 2011/12 financial year.

In this scenario it would be possible to mobilise the works in March 2012. There is therefore potential for between £1m and £2m to be spent within 2011/12 if consideration could be given to pre-ordering materials required for the works.

The profile would be similar to that shown in 4.4 above, except any spend completed in 2011/12 would be deducted from the £9m shown against 2012/13. The allocation of £10m in 2012/13 would not be affected. Exact arrangements for this spending profile could be discussed in more detail if funding in 2011/12 can be made available.

4.6 Please indicate the level of flexibility with regard to the phasing of the local contribution of the bid (including the third party contribution), should the DfT have a need to vary the phasing of its own contribution for budgetary reasons.

Please detail the level of change in DfT support per funding year you could accommodate within the project and from which sources any change would be made up.

This scheme remains the primary transport priority for the County Council and it

forms part of the first priority transport infrastructure within the Joint Core Strategy. Therefore the phasing of the LA funding contributions can be considered to be as flexible as possible as and the County Council would be pleased to discuss flexibility further with DfT if the funding profile requires some amendment once all of the bid submissions have been considered.

4.7 Please set out the efforts you have undertaken to obtain (additional) third party funding and, where appropriate, why it is not available.

The GNDP authorities are committed to introduce a coordinated CIL by summer 2012. The early introduction of a CIL will enable maximum developer contributions to be realised from the substantial planned growth.

Income and expenditure models of CIL are being run and the work has shown that there is a significant funding gap for infrastructure necessary to deliver growth. The NDR and the other major NATS interventions such as BRT are included in this modelling.

The CIL modelling demonstrates that should major scheme funding be significantly reduced, suffer an extended delay or not be forthcoming, CIL would not be sufficient to backfill a shortfall. If the NDR does not progress in a timely fashion it will undermine delivery of the JCS and the potential for growth of the area will not be realised.

Whilst the Transport Minister has announced that there is to be no further 'urban road pricing schemes', the County Council has previously undertake a significant study to consider whether a road congestion charging scheme for Norwich was viable. The outcome of this work was agreed with DfT and it confirmed that such a scheme could not be made to work in Norwich.

In relation to Postwick Hub, the County Council has been able to secure a land contribution from a private developer necessary for the new junction improvement. This developer is also making a £2m contribution via Section 106 arrangements to public transport improvements – the largest single contribution towards public transport investment ever secured by the County Council. An adjacent development also has planning permission and will be making approximately £1.3m in contributions towards public transport improvements.

In the current climate these are real benefits that contribute to the scheme and also to a range of projects that will help to deliver the wider NATS Implementation Plan. Developers will be making major contributions via the CIL mechanism as outlined above.

4.8 Please supply details of likely revenue generated, any ongoing revenue liability associated with the operation of the scheme (other than routine maintenance) and how you intend to fund it. If revenues fall short of those forecast (especially in the early years after implementation) how will these be funded? *(This is of particular relevance to public transport schemes but could apply to package schemes.)*

There are no revenue funding implications related to this scheme except for routine maintenance. These annual costs will be absorbed within the County Councils

overall maintenance budgets.

4.9 Please detail any other funding information you think to be of relevance to the bid

(For example other costs or revenue risks etc being taken by the local authority or other parties but not included within the funding table above.)

None

4.10 Please explain how the Local Authority contribution will be funded.

Explain where local contributions are dependent on a particular source of income and contingency plans if that income is not forthcoming. Please also include any contingency plans for meeting third party costs that fail to materialise.

The County Council, at its April 2010 Cabinet meeting (refer to Ref 09), agreed to underwrite the cost of the funding shortfall for the NDR. This equated to £39.7m at that time and included funding the NDR as far as the A1067. This bid covers the NDR as far as the A140, removing the 6 km section to the A1067. This bid therefore includes the NCC contribution relative to the delivery of the NDR to the A140.

The County Council has the capability to provide the necessary funding through prudential borrowing, which has been confirmed by the Section 151 Officer.

The Growth Point funding is already allocated to the delivery of projects in the Norwich area. This funding is held in accounts managed by the GNDP and is allocated to projects that contribute to Growth. The funding outlined in this bid is therefore based on an already confirmed budget allocation.

The funding for the Local Authority and Third Party contributions is therefore confirmed.

SECTION 5: STAKEHOLDER MANAGEMENT

5.1 Consultation

Please provide a brief overview of the consultation you have undertaken to date with

- (a) the public,*
- (b) statutory environmental bodies and*
- (c) other stakeholders;*

*This should include dates detailing when consultation was carried out
Please also summarise any further consultation you plan to undertake.*

The NDR scheme has undergone extensive consultation throughout its development within the Norwich Area Transportation Strategy (NATS) and this is documented in further detail in the Strategic Case document (Ref 01) that supports this submission.

The key elements of this engagement are:

(a) the public

- Public consultation in 2003 where 140,000 leaflets were distributed to stakeholders and residents in and around Norwich. This was to highlight the preferred NATS strategy which included the NDR. 78% of respondents supported the NDR. Consultation report is at the following weblink:
<http://www.norfolk.gov.uk/Consumption/groups/public/documents/article/ncc072102.pdf>
- Public, stakeholder and statutory environmental bodies (SEB) consultation in 2004 where 130,000 leaflets were distributed. This also included meetings with affected parish councils and was to seek views on the possible routes for an NDR. Consultation report is at the following weblink:
<http://www.norfolk.gov.uk/Consumption/groups/public/documents/article/ncc072103.pdf>
- Public and business consultation October 2009 on the NATS Implementation Plan in the form of exhibitions and a questionnaire. Over 160,000 booklets were distributed to residents by post, with nearly 12,000 responses received. The overall strategy, which includes the NDR, and the support for BRT were over 60% and the city centre proposals over 70%. In addition to this, a separate business community consultation was completed. The NDR was highlighted as the most important scheme within NATS by business, with over 80% agreeing that the Plan would improve the local and regional economy. Consultation report is at the following weblink:
<http://www.norfolk.gov.uk/Consumption/groups/public/documents/article/ncc076886.pdf>

(b) statutory environmental bodies

- Consultation with statutory environmental bodies in 2005 to scope the environmental assessment work to be submitted to the planning authority
- 2007 to 2008, there were meetings and dialogue with Natural England (NE) and the Environment Agency (EA) to discuss and prepare information to inform an Appropriate Assessment for the NDR. February 2008 received a letter from the Environment Agency (EA) on the Draft Appropriate

Assessment (AA) stating that it adequately addressed all the issues set out previously and agreed that the scheme is unlikely to have an adverse impact on the integrity of the Wensum SAC. NE also responded and said that the draft contained a comprehensive assessment of the likely significant effects which were limited to potential impacts on water quality.

- 2007 dialogue with EA on drainage issues. Agreed the use of Sustainable Drainage Systems (SUDS) and confirmed responsibility for future maintenance. Overall the EA was content with the draft drainage proposals.
- 2007 prepared draft species survey reports and consulted Natural England, the Biodiversity Action Plan (BAP) partnership, and the Norfolk Wildlife trust (NWT). A letter from Natural England in Jan 2008 concluded that the survey reports on aquatic invertebrates, deer, badgers, great crested newts, barn owls, over wintering and breeding birds and reptiles were satisfactory. The NWT had no specific comments to make but supported the recommendations for habitat enhancement.
- In May 2008 Natural England (NE) commented on our draft “Bat Survey Report” and expressed concern about the content with respect to Barbastelle bats. A supplementary report was prepared and consulted upon in September 2008. NE considered that the proposed mitigation was adequate for all species except bats and that additional surveys were required.
- Extensive consultation continued with NE during 2009/10 to establish appropriate ongoing survey methodologies for determining bat populations along the NDR route. This work included applications for licenses to trap, radio tag and track Barbastelle bats. An extensive report detailing the bat survey results was prepared to help understand species distribution and sent to EN for their consideration.

(c) other stakeholders

NCC has been in constant contact with directly affected landowners, issues raised by them have been considered and addressed and where appropriate have been incorporated into the Scheme design.

The NDR scheme and the Norwich Area Transportation Strategy (NATS) Implementation Plan have been embodied in the Joint Core Strategy for the Norwich Area which has undergone the full statutory LDF consultation processes.

The JCS underwent an Examination in Public in November 2010, was found sound by the Inspectors, and been adopted by the local authorities in March 2011.

5.2 Letters of support

Please append any letters of support explaining strategic importance of scheme especially from the Local Enterprise Partnership and business groups.

These should detail, where possible, the particular outcomes they believe the scheme will deliver. Where a LEP includes more than one scheme it will be important that they differentiate between schemes, and prioritise if possible.

The Chamber of Commerce has continued to express the concern that some businesses in the Norwich area are either not expanding or are considering leaving Norwich altogether as a consequence of constraints on the highway network. There

are also a number of companies who have said to us directly that their businesses would benefit from the implementation of the NDR.

The Chamber of Commerce has also written again to support the NDR scheme and quotes a number of businesses and what delivery of the NDR means to them. The views of these businesses are also shown in Appendix A to the Strategic Case.

The New Anglia LEP which covers Norfolk and Suffolk has set up a Transport Forum and agreed its most current priorities. It emphasises the critical importance of the NDR scheme to the economic success of the sub-region. The New Anglia letter of support for the NDR is Ref 12.

The most recent consultation with business was during summer 2011 where businesses in Norwich and Norfolk were contacted to get an update on their views on the NDR. To date 32 responses have been received of which 29 were fully supportive. Some of the significant responses are highlighted in Section 11.5 of the Strategic Case document (Ref 01) and a spreadsheet containing fuller details of the individual responses is included as Appendix A to the Strategic Case document.

The consistent messages are:

- The current transport network places additional costs and delay on businesses which makes it hard for them to grow and prosper.
- Some are considering relocating to more accessible location
- The better road links that the NDR provides will be beneficial for economic growth and employment

The response from the newspaper group **Archant** which employs 800 staff and produces the Eastern Daily Press, the Evening News and various other regional publications is a good illustration of a business view and encapsulates most of the issues.

Archant Norfolk – with its stable of newspapers, magazines and websites – is fully supportive of Norfolk County Councils’ bid to the DfT for a proportion of the funding to build the NDR.

The NDR is essential for the economic development of our county. Over the years there has been woeful under-investment in transport infrastructure in Norfolk compared with other parts of the country. Our near neighbours Cambridgeshire and Peterborough have benefited from significant road projects that have reaped dividends for their business communities.

Our county has been treated as a sleepy backwater by successive governments and yet it has the potential to be a vibrant economic powerhouse, capitalising particularly on mixed energy, tourism, advanced engineering and food and agriculture.

Without better road links to the east and north of Norwich it is unlikely we will fully reap the benefits of these opportunities.

5.3 Opposition

Please describe any significant opposition to the proposed scheme, the reasons for this opposition and how you are dealing with their concerns?

Please describe any mitigation measures you have included in your plans in response to these concerns.

There is opposition to the NDR from the Norfolk and Norwich Transport Action Group (NNTAG) and a campaign group Stop Norwich Urbanisation (SNUB) who are against growth in the northeast of Norwich and have opposed the NDR because they have associated it only with the role of enabling growth. However, public consultations have also indicated strong overall support for the NDR from the public and from business.

The main reason for the opposition from NNTAG is that they believe the Norwich Area Transport Strategy should not include the NDR and should rely on public and sustainable transport enhancements alone.

Assessment work on NATS has demonstrated that the NDR is a necessary component of the NATS Implementation Plan and that together they address:

- Traffic congestion causing delay to public transport services
- Constraints on allocated employment development sites
- Transport issues inhibiting business growth
- Providing headroom to accommodate planned growth

This view has also been arrived at by the Inspectors at the JCS EiP. After hearing all of the evidence provided by the objectors, they commented in their final report that they are not convinced that a non-NDR package of transport interventions would be a realistic solution in terms of the necessary infrastructure to support the planned growth in the Norwich area.

SECTION 6: ADDITIONAL INFORMATION

6.1 Please add any additional information that is relevant to your Best and Final Funding Bid that is not covered elsewhere in the form.

The NDR scheme, as an essential element of transport infrastructure, will directly support the planned creation of in excess of 12,000 new jobs at strategic employment sites under the JCS. Up to 40% (approx 5,000) of these jobs could be delivered by 2014 with the balance being delivered by 2017 and with further growth to follow. It is estimated that development of 292,000m² of new business space, will be required to accompany the job creation.

This development is crucial if Greater Norwich is to rebalance the economy toward private sector jobs and attract high value added businesses of the future including the knowledge economy, health and life sciences, advanced engineering, renewables and creative industries. The NDR scheme should be seen as a key enabler in this respect.

The NDR scheme will also stimulate growth in employment opportunities in tourism and local services. Many disadvantaged and benefit-dependent residents of Norwich and the immediate vicinity will be able to take these jobs. We estimate that around 15% - 20% of jobs will be taken by residents in these categories.

There will also be significant job creation in the construction of the 9,800 homes directly related to delivery of the NDR and Postwick Hub, plus the associated commercial development, services and infrastructure such as transport and utilities necessary to deliver this housing growth.

The requested funding for the scheme, totalling £86.49m (£67.49 DfT and £19.00m CLG) provides the potential to unlock growth that as a conservative estimate, based on the above housing and job creation figures and published unit costs, would directly support **£1.3bn** of additional investment in the Norfolk economy and the catalyst to provide for greater private sector jobs for this area.

By unlocking Joint Core Strategy development the NDR scheme will:

- Raise the pace of annual employment growth by about 0.5 percentage points.
- Offer suitable jobs to several thousand people with poor skills at present.
- Raise the trend rate of GVA growth in Norfolk by about 0.5%, progressively raising per capita GVA from its current level of 78.5% of the national average to 83.5% by 2026.

The NDR is part of the NATS package of measures to develop a transport network that responds to existing problems and Issues and also meets the objectives and manages the pressures of significant planned growth.

The NDR is a significant element of NATS, but is only £127m of an overall cost of the NATS package of £342m. Through its work with the GNDR the County Council has identified priorities in NATS to support the NDR to achieve its objectives and to ensure planned growth can occur. This subset of NATS (excluding NDR) cost estimate is £145m and can be funded from predicted CIL income.

So whilst major scheme funding is sought for NDR the majority of supporting interventions that collectively total more than the cost of NDR but are vital to it achieving its objectives will be funded locally. This whole stream of investment is at risk if major scheme funding cannot be secured.

Commitment to delivering NATS - Work already completed and in progress

The adoption of the NATS Implementation Plan in April 2010 has enabled the County Council to secure funding for a range of projects within Norwich in order to improve bus and walking/cycling provision. The focus for this has been in those locations that are not immediately dependent on the NDR to free up the necessary traffic space required. Examples of some of the larger schemes already developed include the following:

- Developing the details of a Bus Rapid Transit corridor in Dereham Road in the west of Norwich. The first phase of this is expected to be delivered during 2011.
- Work has also started in developing the proposals for bus only corridors within the city centre. Part of this work includes involvement with private sector retail/commercial businesses to determine levels of financial support to the project.
- Improvements to the A11 proposed Bus Rapid Transit corridor in the south of Norwich have already been completed in 2010.
- Completion of St Augustine's Gyratory to improve local air quality
- Whitefriars Roundabout and Barrack Street's junction with Silver Road to improve the efficiency of the network
- Continued investment in Park & Ride sites and Bus Station (previously delivered through NATS)

This reflects the County Councils (and its partners) clear determination to ensure an improved sustainable transport system for Norwich in the future. However, without the NDR, these improvements to corridors in the north and east of the city will not be possible.

Further work has also been ongoing with the HA as part of the JCS. A Developer Forum has been initiated to specifically look at the needs of the A11 and A47, in particular where they meet at the A11/A47 'Thickthorn' roundabout junction. Work is also ongoing with HA to review the Longwater junction at the western end of the A47 Norwich Southern bypass.

This strategic approach is an example of the wide ranging work that has been completed and is continuing to be developed as part of the growth agenda to ensure the targets set out in the JCS are achieved.

6.2 Please provide details of any other information that has been submitted to the Department since January 2011 that forms part of your submission *(This should include name of the document and date of submission.)*

BAFB Form and Link to the 5 Case Model

The following section provided to bidders to detail which elements of the form relate to the 5 cases used in decision making.

Case	Elements of the BAFB Form
Strategic Case	1.1, 1.2, 1.3, 1.5, 2.1,2.2, 2.4, 2.5, 3.1, 3.2, 5.1, 5.2, 5.3
Financial Case	1.4, 2.2, 2.3, 2.4, Section 4
Economic Case	3.2 (and Appendices)
Management Case	3.3, 3.5, 3.6, 3.7, 3.8, 5.1, 5.3
Commercial Case	3.4, 3.5,3.7,3.8

4.2 Appendix B – DfT confirmation

4.3 Appendix C – Cabinet report and minutes April 2012

Norwich Area Transportation Strategy (NATS) Implementation Plan and Norwich Northern Distributor Route (NDR)/Postwick Hub Update

Report by the Director of Environment, Transport and Development

Summary

This report provides an update on the progress made to date in delivery of the NATS Implementation Plan, adopted by the County Council by Cabinet in April 2010. Some key achievements have already been made and these are included within the report, including delivery of elements of the Bus Rapid Transit corridors, highway improvements and other bus and cycle improvements. In addition, details are provided about forthcoming bids for funding under the Local Sustainable Transport Fund and the Better Bus Area bid.

The NDR, a key element of the NATS Implementation Plan, has been through the Department for Transport's (DfT) Development Pool bidding process. DfT confirmed in December 2011 that it was providing £86.5m towards the cost of delivering the NDR and Postwick Hub junction (which accounts for £19m of the DfT contribution). The report sets out the latest position for both the NDR and Postwick.

Postwick Hub has planning consent and now has a final stage of completing the Public Inquiry for the Side Roads Order. It is expected that this will take until the summer to complete and, if so, there is potential for the works to start by the end of 2012. This would result in a completion of the junction by the Spring of 2014.

The NDR still has to go through its own planning process (and completion of the necessary statutory Orders). It is anticipated that the planning application will be submitted in the Autumn of 2012. A communications plan has been developed to ensure that the public have the opportunity to review the proposals as part of a pre-planning consultation. These exhibitions are set out in the report and are planned between mid-April and mid-May 2012.

Whilst the DfT funding is for the project to the A140, the report also includes details for the section from the A140 to the A1067 and invites Members to indicate whether this should be included as part of the planning application, the timing of its delivery and its funding.

Recommendation

Members are requested to:

- (i) Comment on the delivery of NATS Implementation Plan.
- (ii) Recommend submitting a planning application for the NDR to the A1067.
- (iii) Recommend whether to continue to progress a dual carriageway NDR between the A140 and A1067 as part of the planning submission, or consider a single carriageway option.
- (iv) Recommend delivering construction of the NDR as a single project to A1067, or consider a staged delivery (ie to the A140 first, then to the A1067 at a later date).
- (v) Recommend the forward funding profile as provided in the DfT bid for the A140 NDR project (Appendix A) and for the A1067 NDR (Appendix B).
- (vi) Recommend to continue to underwrite the NDR (value depending on dual or single option between A140 and A1067), but taking note of the GNDP in principle funding of up to £40m towards the NDR and related measures.

1. **Background**

- 1.1. In April 2010 Cabinet approved recommendations to adopt the NATS Implementation Plan, make changes to a small number of NATS policies and approve the application for planning permission for the NDR to the A1067. The report also included an agreement of Cabinet to underwrite the funding shortfall of £39.7m for the NDR by use of prudential borrowing.
- 1.2. Since that time a number of events have taken place that have impacted on the delivery of the project and this report sets those out and provides an update of the current position. It also sets out the work already completed as part of the NATS Implementation Plan delivery and what is planned in the forthcoming period. The Plan is an essential and key element of the economic growth strategy for Norfolk, and is vital in order to achieve LTP targets.
- 1.3. The report asks Cabinet to comment on progress to date with NATS and agree the recommendations made to progress the NDR planning application.

2. **NATS Implementation Plan**

- 2.1. The Implementation Plan identifies a range of transport measures, some of which are only made possible by the NDR.
The key features of the Plan are:
 - A bus rapid transit (BRT) network
 - Improvements to a core bus network as well as integrated ticketing and improved information
 - City centre improvements
 - A package of cycling and walking improvements
 - Specific rail service improvements
 - Smarter Choices initiatives, like travel planning
 - The NDR
- 2.2. Since adopting the plan, a lot has already been achieved and the following schemes have been completed, or are nearing completion:
 - St Augustines Gyrotory
 - A11 Newmarket Road (BRT) bus lane extension
 - Dereham Road (BRT) junction improvement at Barn Road and new bus lane
 - Dereham Road (BRT) junction proposal consultation for Old Palace Road
 - Development of elements of the Rackheath BRT corridor
 - Improved multi-trip/operator ticketing for bus journeys
 - Improved off-bus ticketing facilities
 - Continued work with businesses to develop smarter travel plans
 - Development of a cycling network for Norwich
 - Walking schemes such as Aylsham Rd/Woodcock Rd and Newmarket Rd/Eaton Rd crossing improvements
 - Lady Julian Bridge at Riverside with associated walking/cycle links
 - Cycling schemes including Lakenham Way Cycle Route combined and Improved City Centre Cycle Parking
 - Bus traffic light priority city wide
 - Improved bus shelters through negotiated contract.
 - Castle meadow low emission zone

- Real time car parking information

2.3. In addition to the details in 2.2, work has also progressed on other major projects which are the subject of funding bids. These include:

Local Sustainable Transport Fund (LSTF)

The County Council is bidding for approximately £4.1m of government funding under the LSTF initiative. This includes details for a scheme to deliver two-way bus movements and the removal of general through traffic from Chapelfield North. The scheme will also provide access to/from the Chapelfield shopping centre for deliveries. It includes improvements to the Grapes Hill Inner Ring Road roundabout junction and changes to traffic movements through Westlegate. This provides significant bus priority benefits and journey time and journey reliability improvements for bus passengers. It is hoped that if the bid is successful, the scheme can start construction towards the end of the 2012/13 financial year. The proposals have already been approved by the Norwich Highways Agency Joint Committee.

Better Bus Area

This is a further bid to government for approximately £2.9m for bus related improvements which include some large bus priority capital infrastructure improvements in Norwich. The bid is also likely to include quality bus partnerships on some corridors into Norwich, traffic signal prioritisation, enhanced passenger information and bus stop improvements and enhanced ticketing and bus journey options. The bid was submitted on 24 February and a funding decision is expected by 31 March 2012.

Schemes promoted as part of these bids will be subject to further local consultation before details are taken forward through the construction phases. All details will be considered by the Norwich Highways Agency Joint Committee.

2.4. This is an ongoing delivery programme. Some elements of the Plan are dependent upon the delivery of the NDR and the benefits this brings in reducing traffic levels on key radial routes and on the ring roads. Some City Centre enhancements will need to be considered in the context of traffic reductions made possible by the NDR.

Delivery of the Plan is anticipated to need up to 15 years to fully implement and it is anticipated that there will be a range of funding opportunities that will become available during the period. Part of the funding plan will be the possible use of income generated by the Community Infrastructure Levy (CIL) made possible following the adoption of the Joint Core Strategy.

3. NDR Update

3.1. Department for Transport (DfT) Approval

3.1.1. In the April 2010 Cabinet report, details were provided that set out the approval of the Major Scheme Business Case for the NDR by the Department for Transport (DfT). The report also set out the funding requirements for the project and the need for the County Council to underwrite £39.7m towards the cost of the project. Since

that time, the change of government and the subsequent Spending Review resulted in a need to slow down project delivery and respond to the new requirements set out by government – called the ‘Development Pool’ bidding process.

- 3.1.2. The original funding for 2010/11 was set out at £3.2m, however this was significantly reduced as a result of the spending review to £1.6m part way through that year. A funding allocation of £750k, from Growth Point funds, was agreed for the 2011/12 financial year to complete the DfT bidding process for the NDR and Postwick Hub.
- 3.1.3. This bid was submitted in September 2011 and DfT confirmed in December 2011 that the bid was successful and that Programme Entry status was re-confirmed. DfT have provided a funding allocation of £86.5m, which includes £19m towards the delivery of the Postwick Hub junction. The DfT project assessment is published on their website. It includes a number of positive statements in relation to the project, which still retains a cost benefit ratio of 5.4, representing very high value for money.
- 3.1.4. In their confirmation letter, DfT have set out a requirement for NCC to commit to ‘a funded and programmed package of sustainable transport in the city centre, on the basis of the Norwich Area Transportation Strategy’. This commitment is necessary prior to Full Approval of the project. NCC has an extremely good track record of delivering the NATS Implementation Plan and such a commitment has already been made since the adoption of the Plan (as set out earlier in this report).
- 3.1.5. Discussions have already been held with DfT to establish their requirements in relation to the sustainable transport commitment. This has established a need to develop and publish a tracker that shows the extent of work already completed as part of NATS and what else is planned, when and how it will be funded. This is currently being developed and will be regularly updated.
- 3.1.6. The funding to deliver the NDR and Postwick was set out in the Development Pool bid document. An extract of that profile is included at Appendix A. This sets out that funding of £1.481m for the NDR for the forthcoming year will be necessary. Funding for Postwick Hub will be further balanced through Growth Point funds until the Public Inquiry process is completed and full funding from DfT can be drawn down (see section 4 below).

3.2. **A140 to A1067**

- 3.2.1. The next stage for the NDR is the submission of the planning application. This is programmed for the Autumn 2012. A key decision in taking this forward is the extent of the scheme being promoted. The County Council has made a commitment to deliver the NDR to the A1067 and this is also the scheme set out in the Joint Core Strategy. Our analysis indicates that the benefits of this scheme are greater than those of the scheme that stops at the A140.
- 3.2.2. The A140 NDR scheme is the limit to which government funding will be provided. This was as set out in the original Programme Entry for the Scheme (confirmed in 2010) and also as part of the Development Pool process (and was therefore the scheme that DfT asked the County Council to submit).
- 3.2.3. Cabinet can decide which scheme should be taken forward to planning. It is clear that the A1067 NDR is consistent with the JCS and also provides greater economic

benefits. However, in order to keep the costs of the section from the A140 to the A1067 within reasonable limits of the overall budget it would be necessary to consider this section as a single carriageway, rather than dual, as originally proposed. The decision to change to a single carriageway would also enable the delivery of an at-grade junction at the A140 – something that DfT also requested that the County Council investigated as part of its funding bid. A dual carriageway would most likely require a grade separated junction (as previously proposed) due to the additional traffic demand and the necessary structures for this make it significantly more expensive.

3.2.4. In addition, the section of the A140 to the A1067 has some of the more significant environmental mitigation requirements, particularly for bats. The dual carriageway scheme would require more substantial bat bridges whereas a single carriageway could possibly adopt less expensive alternatives.

3.2.5. In view of the details in section 3.2.1 & 3.2.4, Members need to decide:

- Should the NDR planning application be for Postwick to the A140 or Postwick to the A1067
- Should the section from the A140 to the A1067 be single carriageway or dual carriageway

Depending on this decision, further work will need to be completed to assess whether the A140 junction could be promoted as an at-grade roundabout design with a dual carriageway from the A1067, which takes account of the cost reduction exercise required by DfT for this junction.

3.2.6. There is scope to stage the delivery of the NDR. The A140 to A1067 section could be delivered at a later date following completion of the NDR to the A140. However, the immediate benefits of the section to the A1067 would not be realised and the costs of a later scheme would be higher as it would require a further contract stage and would need to allow for additional mobilisation costs for the works. It would also lose the economies of scale effect that is gained from delivering the scheme as one. It is therefore recommended, subject to establishment of funding, that the scheme is taken forward as one to the A1067.

3.2.7. The costs of delivering a scheme to the A1067 are estimated to be £30m for a single carriageway and £40m for a dual carriageway and are in addition to the costs set out in Appendix A (which is only for the DfT scheme to the A140). Significant efforts have been made to constrain the costs, however the delays to the project have created inflationary impacts.

3.3. **Funding**

3.3.1. The County Council has previously underwritten £39.7m towards the NDR (agreed by Cabinet in April 2010). The Greater Norwich Development Partnership (GNDP) has agreed in principle a commitment to provide up to £40m towards the cost of the NDR and related measures, as priority 1 key infrastructure projects essential to delivering the objectives set out in the JCS.

3.3.2. A new delivery funding profile for the scheme to the A1067 is shown at Appendix B. It includes the early estimates for the additional cost of the A1067 project and an

indication of the funding that the County Council will need to underwrite. The two tables provided set out a total cost to deliver the project to the A1067, one assuming a dual carriageway to the A1067, the other a single carriageway. Detailed cost information for the section from the A140 to A1067 is still to be finalised. The tables indicate the cost to deliver the scheme from April 2012 to construction completion.

- 3.3.3. The figures provided also assume that the A1067 scheme is delivered as part of the A140 project. This minimises the overall construction costs, however there is potential to delay the delivery of the section to the A1067, but this would increase the total project costs. Additional works mobilisation, loss of economies of scale and balance of materials usage, purchasing power, and possibly re-procurement would add to delivery costs. There would also be an additional inflation impact which would depend on the period between delivering the A140 project and completing the A1067 section.
- 3.3.4. As set out in Appendix B, it is anticipated that the cost of a dual carriageway scheme from the A140 to the A1067 will require approximately an additional £10m of investment compared with a single carriageway scheme. This is due to the additional carriageway and earthworks construction, but also due to the more significant environmental mitigation measures that are necessary for a dual carriageway option between the A140 and A1067, and the potential additional cost of a grade separated A140 junction. There is a risk that further work on these elements will increase the overall project costs. In addition, Members should be aware that the NDR to the A140 will cost some £101m from now of which the County Council needs to underwrite approximately £13m, but the full cost of the A140 to A1067 section will be borne by the County Council.

3.4. Delivery Timescales

- 3.4.1. Assuming the recommendations set out in this report are taken forward, the programme for delivering the NDR is set out below:

Milestone	Expected Completion Date
NDR	
Approval of BAFB from DfT	December 2011
Submit Planning Application	Late 2012
Determination of Planning Application	Spring 2013
Statutory Orders published	Spring 2013
Public Inquiry Starts	Late Summer 2013
Agree Target Cost	Autumn 2013
Confirmation of Orders	Spring 2014
Submit Full Approval application to DfT	Summer 2014
Site Clearance Works/Mobilisation Start	Autumn/Winter 2014
Work Starts on Site	Spring 2015
Work Completed	Spring 2017
Opening / commencement of operations	Spring 2017

- 3.4.2. Prior to the planning application submission, set out in the table above, there is a need to complete a planning pre-consultation exercise. A communications plan has

been developed to support this process and a series of exhibitions are planned in April and May 2012. These are:

19 Apr 12	Rackheath	12:00-19:30	Holy Trinity Church Hall
23 Apr 12	Taverham	12:30-19:00	Taverham Village Hall
26 Apr 12	Sprowston	12:00-19:30	Parish Council Offices
30 Apr 12	Horsford	12:00-19:30	Horsford Village Hall
02 May 12	Spixworth	12:30-19:00	Spixworth Village Hall
04 May 12	Postwick	12:00-19:30	Postwick Village Hall
08 May 12	Great Plumstead	12:00-19:30	Gt Plumstead Village Hall
11 May 12	Horsham st Faith	12:00-19:30	St Faith's Centre

4. **Postwick Hub Update**

- 4.1. In the April 2010 report to Cabinet, the planning consent for Postwick Hub had been granted and a decision whether or not a public inquiry into the Side Roads Orders (SROs) was still awaited. The scheme has moved forward since that time as set out below.
- 4.2. The planning consent was the subject of a legal challenge. This was largely focussed on procedural issues relating to the planning process and the way information was presented to the Planning Committee. A decision was taken to accept the legal challenge and request the courts quash the planning consent, such that an updated application could be re-presented to the Planning Committee.
- 4.3. This happened in August 2011 and planning permission was granted again in October 2011 (following completion of signing the necessary land and Section 106 agreements). A further legal challenge period of 3 months has since elapsed and no challenges have been received and therefore the planning consent is now confirmed.
- 4.4. It is worth also noting that the planning consent decision was also referred to the Secretary of State (SoS) to determine whether the planning permission should be the subject of a public inquiry. The SoS determined that an inquiry was not required.
- 4.5. In addition to the updated application for the Broadland Gate/Postwick Hub scheme, an application was also submitted for the Brook Farm development. This includes the extension of the existing Broadland Business Park and a new housing development of 600 properties just north of the business park.
- 4.6. Planning consent has also been granted for the Postwick Park and Ride extension. As part of the DfT Development Pool bid process however, a decision has been taken to deliver the access road element of the Park and Ride (P&R) site as part of the construction of the Postwick Hub junction improvement and defer the delivery of the additional parking spaces until approximately 2015 (depending on demand for additional spaces at the site). This rationale was set out in the bid and accepted by DfT as part of that process. It provides sufficient flexibility to deliver the P&R

extension to meet demand.

- 4.7. A decision regarding the need for a public inquiry into the SROs was also taken by the Secretary of State (SoS). In making this decision the SoS determined that even though there were no statutory objectors, the number of non-statutory objections were sufficient for the SoS to decide that a public inquiry should be held.
- 4.8. As part of the spending review announcement, initially Government confirmed that no new public inquiries would be instructed. This position has since changed and now that the funding of the project has been re-confirmed, following the DfT Development Pool announcement, the public inquiry process has now commenced.
- 4.9. The County Council is working with the Highways Agency (HA) to progress the inquiry. The HA are leading this process as the SROs have been published by them because the junction is linked to their network (ie the A47 southern bypass). Due to the delays in moving forward with the public inquiry, a further round of publishing the orders (ahead of the inquiry process) is reasonable to ensure objectors have the opportunity to maintain or withdraw their objection and to ensure they have sufficient time to prepare for the inquiry. This re-advertising/posting of the notices process will be completed by the end of March 2012.
- 4.10. The timescales for the delivery of the Postwick Hub project are set out below:

Milestone	Expected Completion Date
Postwick Hub	
Statutory Orders (Side Roads Orders) published	Autumn 2009
Planning Approval (reconfirmed)	October 2011
Approval of BAFB from DfT	December 2011
Re-advertise Side Roads Orders	February 2012
Public Inquiry Starts	Summer 2012
Agree works Target Cost	Summer 2012
Submit Full Approval application to DfT	Late Summer 2012
Confirmation of Side Road Orders	Autumn 2012
Work Starts on Site	Late 2012
Opening / commencement of operations	Spring 2014

- 4.11. Funding the Postwick Hub junction works will be via a £19m allocation from DfT – set out in their funding approval following the Development Pool announcement. This however cannot be drawn down until the public inquiry process has been completed. Prior to this, funding towards the P&R extension works (ie delivery of the new access) from Growth Point will be utilised to support the project delivery through public inquiry. This therefore means that the County Council will not be required to find funding towards Postwick Hub during 2012/13.

5. **Joint Core Strategy (JCS) Legal Challenge**

- 5.1. The JCS completed its examination in public late in 2010 and was adopted by the Local Planning Authorities (Norwich City Council, Broadland District Council and South Norfolk District Council) in March 2011. Since its adoption, a legal challenge was submitted and this has been heard at the High Court (in December 2011).
- 5.2. The Judgement following the High Court has dismissed the challenge in relation to the NDR, but it does uphold the challenge regarding the JCS Sustainability Appraisal (SA) and the assessment of the 'growth triangle', in particular the

assessment and presentation of housing allocation options.

- 5.3. At a further hearing on Wednesday 29th February the judge ruled that the elements of the JCS that related to Growth in Broadland part of the Norwich Policy Area (NPA) including the North East Growth Triangle are remitted back to pre submission stage and cannot be treated as adopted. This means that further work will need to be carried out to ensure that the SA is in compliance with the European Directive. Following that the remitted elements of the plan would need to be published and then submitted to the Secretary of State for examination in public. It is estimated this process could take 12 months to complete. It should be noted that the Judge did not quash any element of the JCS. The JCS remains adopted, overall housing totals remain for the NPA and only the wording relating to growth in Broadland part of the NPA including the North East Growth Triangle are remitted back to pre submission stage. The exact wording is set out in a schedule that accompanies the court Order.

6. **Resource Implications**

- 6.1. **Finance** : The financial details for the project are set out in the main text of the report above. The profile to deliver the project from 2012 to 2018 is shown at Appendix B. This shows the cost to take the project forwards from this point, with a total value of £131.5m to deliver Postwick Hub junction and the rest of the NDR to the A1067 with a single carriageway to the west of the A140, or £141.5m for a dual carriageway. The funding is comprised of £86.5m from DfT, £1.67m of Growth Point funding and a balance of £43.33m (single A1067 section), or £53.33m (dual A1067 section) which will be covered by the NCC underwritten funding, supported by a commitment in principle by the GNDDP to provide up to £40m of funding towards the NDR and related measures, as priority 1 key infrastructure projects in the Joint Core Strategy.
- 6.2. **Staff** : Staffing levels for the NDR project were significantly reduced as part of the Spending Review process. Following confirmation of funding from DfT a team capable of delivering the NDR is being developed with the necessary support provided by partners Mott MacDonald. It is anticipated that this team will be in place during March to enable the projects to be delivered to meet the programme set out in this report.
- 6.3. **Property** : Land acquisition for the NDR and Postwick Hub has continued. This is supported where necessary by CPO (for the NDR). Postwick Hub land has been agreed. These costs are included in the overall project costs.
- 6.4. **IT** : Additional PC's are required to support the NDR team. This has been organised and does not require the purchase of additional equipment as it is being drawn from storage.

7. **Other Implications**

- 7.1. **Legal Implications** : NP Law have been engaged as part of the project team to support and manager the specialist legal advisors also appointed.
- 7.2. **Human Rights** : None
- 7.3. **Equality Impact Assessment (EqIA)** : An EqIA has been completed for the NATS Implementation Plan and includes the NDR and Postwick Hub.

- 7.4. **Communications** : A communications plan has been developed that includes Member briefings (already completed), briefings with affected Parish Councils and a series of Exhibitions in late April/early May that form part of the pre-planning consultation for the NDR. The plan identifies key stakeholders and mechanisms for making/maintaining communication and will continue to evolve and adapt as the project progresses.
- 7.5. **Health and safety implications** : Nothing at this stage, however detailed Health and Safety plans are being developed under the Construction, Design and Management Regulations that apply to all construction projects. A Health and Safety Executive (HSE) project notification has been issued for Postwick Hub and the NDR.
- 7.6. **Any other implications** : Officers have considered all the implications which members should be aware of. Apart from those listed in the report (above), there are no other implications to take into account.

8. **Section 17 – Crime and Disorder Act**

- 8.1. Requirements of the Act as it relates to the design and operation of the NDR and other NATS schemes will continue to be taken into account in the development of the project.

9. **Risk Implications/Assessment**

- 9.1. In the context of the NATS implementation plan, key risks associated with the NDR and other NATS schemes are around funding (for NATS IP projects) and planning and other statutory processes for the NDR and Postwick Hub. The scale and complexity of the project means that there are significant risks around cost and timescale, which are being closely managed through active project management and ongoing engagement with the GNPD, government bodies and specialist advisors.

10. **Overview and Scrutiny Panel and Norwich Highway Agency Committee Comments**

- 10.1. Environment, Transport and Development Overview and Scrutiny Panel (ETD O&S Panel) at its meeting on 14 March 2012 reviewed the recommendations set out in this Cabinet report. It was formally proposed that a single project that included a dual carriageway between the A140 and A1067 should be taken forward and that this should be completed as soon as possible. This proposal was put to a vote and received 14 votes for, 1 against, with no abstentions. A question was also raised about what would be done to ease concerns about rat-running and it was confirmed that this would be considered as part of the planning process for the project.
- 10.2. Norwich Highway Agency Committee (NHAC) at its meeting on 22 March 2012 confirmed, by a vote of 4 for and 0 against, to support the recommendations within the report for Cabinet to consider. A point was raised in regard to the LSTF bid and that whilst NHAC has agreed to the principle of the Chapelfield North scheme, they do expect there to be a consultation on the scheme and the results of that presented to a future NHAC meeting.

11. **Alternative Options**

- 11.1. Alternatives to the NDR have been examined through the Major Scheme Business Case process and further examination by DfT as part of the Development Pool bidding process. The Postwick Hub has been developed following examination of numerous alternatives and the current proposal is the only one that meets HA design standards, has planning approval and resolves the significant site constraints.

12. **Reasons for Decision**

- 12.1. The NDR is an essential element of the NATS Implementation Plan and forms a key part of the Joint Core Strategy for the Norwich Policy Area. The decision to continue the project and complete the road to the A1067 is essential to be able to realise the full benefits of the Implementation Plan and to accommodate future growth in housing and employment, which are essential to economic growth in Norfolk and vital to achieving LTP targets.

Recommendation

Members are requested to:

- (i) Comment on the delivery of NATS Implementation Plan.
- (ii) Recommend submitting a planning application for the NDR to the A1067.
- (iii) Recommend whether to continue to progress a dual carriageway NDR between the A140 and A1067 as part of the planning submission, or consider a single carriageway option.
- (iv) Recommend delivering construction of the NDR as a single project to A1067, or consider a staged delivery (ie to the A140 first, then to the A1067 at a later date).
- (v) Recommend the forward funding profile as provided in the DfT bid for the A140 NDR project (Appendix A) and for the A1067 NDR (Appendix B).
- (vi) Recommend to continue to underwrite the NDR (value depending on dual or single option between A140 and A1067), but taking note of the GNDP in principle funding of up to £40m towards the NDR and related measures.

4.4 Appendix D – Cabinet report November 2013 including funding profile

Norwich Area Transportation Strategy (NATS) Implementation Plan and Norwich Northern Distributor Route (NDR) Update

Report by the Director of Environment, Transport and Development

Summary

The implementation plan for the Norwich Area Transportation Strategy (NATSIP) was agreed by Cabinet in April 2010. The plan sets out the range of transport measures, together with their general intended phasing, for delivery over the short to medium term. Good progress has been made delivering the plan. It has now been updated to take account of what has been delivered since 2010, and to reflect the latest position on future scheme delivery, given progress with implementation, and now that the growth plans for the area are more clear.

The update is not a new plan. Rather, it takes account of progress with scheme delivery, outlines the relationship between NATS schemes and the wider growth and development agenda, and takes account of the implications of emerging funding opportunities including the Community Infrastructure Levy. The major difference between the NATSIP adopted in 2010 and the update is in the phasing of delivery of the schemes. For example, the recent government awards of funding for better Bus Area and Cycle City Ambition has allowed significant acceleration of delivery on schemes.

The key features of the Implementation Plan are also unchanged and include city centre improvements; a bus rapid transit (BRT) network; a core bus network, integrated ticketing and information; a package of cycling and walking improvements; specific rail service improvements; "Smarter Choices" initiatives, like travel planning; major road network; the Northern Distributor Road.

The Implementation Plan is included as Appendix A. It sets out the overall basis for scheme delivery across the Norwich Policy Area over the next 10-15 years. A detailed, two-year programme of schemes for delivery will be rolled-forward each year, which Members will be asked to agree annually as part of the annual Local Transport Plan capital programme.

The NDR update at section 3 includes details following completion of the Nationally Significant Infrastructure Project (NSIP) consultation (see Appendix B). It sets out some minor changes to the NDR project as a result of the consultation. It is proposed that the finalised NDR project will be submitted to the Planning Inspectorate in late November/early December 2013.

Having also completed the consultation and finalised the details of the NDR, an updated cost profile for the project is included (see Appendix C). This now incorporates the additional costs of the roundabout at Fir Covert Road and the airport radar replacement, which were reported and agreed at Cabinet in September, which combined have added £2m to the overall project costs.

Recommendation / Action Required

- i) Cabinet is asked to adopt the updated NATS Implementation Plan.
- ii) Cabinet is asked to agree the revised NDR cost profile.
- iii) Cabinet is asked to confirm it is content for the Development Consent Order for the finalised NDR scheme to be submitted.

1. **Background**

- 1.1. The Norwich Area Transportation Strategy (NATS) was first adopted by the local authorities in the area in 1975, continuously evolving and delivering improvements since then. NATS4, the latest version of the Strategy, was adopted in 2004 and its Implementation Plan was adopted in March 2010.
- 1.2. NATS4 and its Implementation Plan were developed alongside and deliver the transport element of the wider sustainable development agenda for the Norwich area as expressed in the Joint Core Strategy (JCS) and the Greater Norwich Economic Strategy. Integration of these strategies has been greatly aided by the close working relationship between the County, City and District Councils through the Greater Norwich Development Partnership.
- 1.3. NATS4 provided a baseline for the development of the JCS. The more detailed proposals in the Implementation Plan were developed alongside the JCS to support its policies and proposals. This was a two way process and the opportunity was taken in 2010 to realign a number of NATS policies with the JCS. The JCS was submitted in late 2009 and adopted in March 2011, although following a legal challenge, part of the JCS relating in particular to the North East Growth Triangle was remitted. This text was re-submitted and was subject to an examination in public beginning in May 2013. The Greater Norwich Economic Strategy was also developed in the same period and adopted in 2009. These strategies complement and support each other to deliver sustainable development across the area.
- 1.4. The NDR progress was updated in a report to Cabinet in September 2013. This set out that the project, a key element of the NATSIP, has been confirmed by the Secretary of State as being of national significance. This has enabled the project, following an earlier decision by Cabinet in December 2012, to continue to complete the necessary Nationally Significant Infrastructure Project consultation process, which commenced in July 2013 and closed on 20 September. This report therefore provides an update on the findings of the consultation and the changes that have been made to the NDR project as a result of the consultation. This has also enabled the NDR project to be defined in its final form prior to submission to the Planning Inspectorate in late November/early December 2013. An updated cost profile for the project has been developed.

2. **Updated NATS Implementation Plan**

- 2.1. The Plan has now been updated to take account of what has been delivered since 2010, and to reflect the latest position on future scheme delivery given progress with implementation and that the growth plans for the area are more clear.
- 2.2. Work on the update shows that overall the County Council and its various partners have delivered NATSIP as originally envisaged, and that future delivery will continue to roll-out the plan as agreed in April 2010. That is, there have been no substantive changes to the content of the plan, either in its delivery to date, or its planned future delivery.
- 2.3. The only change is to the phasing of schemes within the plan. The reduction in available funding for transport over recent years, through the Local Transport Plan, has resulted in some schemes having to be put back. However, it has been possible

to bring forward some schemes in the plan for earlier delivery, such as the measures currently being undertaken as part of our successful bid for Better Bus Area funding. Similarly, the recent successful Cycle City Ambition Grant secured £3.7m of government funding and will allow acceleration of schemes to upgrade cycling infrastructure across Norwich, including an eight-mile route through the city centre linking people with growth areas from the Norwich Research Park to Heartsease.

- 2.4. The plan has been developed to deliver the required step-change in transport provision to realise the full potential of NATS and cater for the transport needs of a vibrant and growing regional centre. The timing of some transport schemes is therefore dependent on the timing of when major growth comes forward. The timing of the delivery of the major housing and jobs growth, which is largely outside the council's control, has affected the timing of delivery of some of the individual schemes as part of the plan.
- 2.5. Looking forward, many elements of the plan's delivery will continue to be contingent on the timing for when growth comes forward, or when funding becomes available. Whilst the plan sets out the overall basis for transport delivery, the exact phasing may change due to these factors. Members will be asked to agree the detailed programme of schemes in the normal way, as part of the overall countywide annual capital programme, which is agreed each year, and in response to ad hoc funding opportunities.
- 2.6. The key features of the Implementation Plan are:
 - City centre improvements
 - A bus rapid transit (BRT) network
 - A core bus network, integrated ticketing and information
 - A package of cycling and walking improvements
 - Specific rail service improvements
 - Smarter Choices initiatives, like travel planning
 - The highway network
 - The Northern Distributor Road.
- 2.7. A copy of the updated NATS Implementation Plan, intended as a stand-alone document is attached as Appendix A. It was reported to ETDOS Panel and the Norwich Highways Agency Committee (NHAC) in September. Panel and NHAC were asked to recommend the updated plan's adoption to Cabinet. Both meetings had similar discussions about the updated NATS Implementation Plan where Members discussed some of the detailed aspects of the plan; particularly in relation to their views regarding the city centre proposals. Members were reminded that the plan is not a new plan, but an update of the Implementation Plan agreed by Cabinet following extensive public and business consultation. Further detailed work to examine the implications of individual measures would be undertaken as and when these proposals are taken forward, at which point there will be opportunity for further Member engagement and discussion. It is anticipated that a further update of the plan will be done – on a similar basis to this one – in another three years as appropriate. At the Panel meeting, members also agreed that they would like to see the NDR construction started as soon as possible and therefore agreed April 2015 as their expected start date.

3. **NDR update**

3.1. As reported to Cabinet in September 2013, the NDR NSIP consultation process has continued following confirmation by the Secretary of State that the project is of national significance. The consultation closing date was originally set as 20 September, however due to issues associated with correct identification of some landowners and some requests for additional time to respond, there was some added provision of time provided for some of the consultees. The details of the results of the NDR consultations have been collated and summarised in Appendix B to this report. These details are important in informing the final version of the NDR scheme that will be submitted under the Development Consent Order process to the Planning Inspectorate in late November/early December.

3.2. The main points to note from the consultation are that the NDR scheme as proposed has not changed significantly, however there are some minor detail changes that have been made in response to the feedback received. Specifically the proposal to include a roundabout at Fir Covert Road as well as at the A1067 Fakenham Road junction has been adopted as part of the final scheme proposals. The NDR remains dual carriageway throughout its length, including the section from Fir Covert Road to the A1067, which was a specific point considered through the consultation and which received overwhelming support from those who responded.

3.3. Other more detailed changes made include:

- changes to drainage lagoons size and positions
- widening of certain private means of access tracks
- new agricultural accesses to fields
- minor amendments to the horizontal alignment of the Holt Road/Drayton Lane Roundabout
- amendments to the Norwich Aeropark and Petans access from the Airport Roundabout
- changes to detailed planting proposals on earth bund to the north of Beeston Lane

Due to the relatively minor nature of these changes, they have a broadly neutral impact on the project costs and therefore there is no change in the overall cost profile as a result of these changes.

3.4. In summary, the consultation has helped inform the final development stages of the NDR scheme. Whilst some changes have been made, they are not considered to be significant and have not had a major impact on the cost of the project. It is therefore proposed to submit the final NDR scheme with the minor changes included to the Planning Inspectorate to ensure the NDR delivery programme, as set out in the September Cabinet report remains broadly on target, with construction due to start in the Spring of 2015.

3.5. The costs of the NDR scheme have been updated as a consequence of finalising the details for submission to the Planning Inspectorate and the detailed cost profile is included at Appendix C. This profile was last update in the April 2012 Cabinet report. The key changes since then have been an addition of £5m agreed by Cabinet in December 2012, following completion of the 2012 consultation, and the more recent costs added (September 2013 Cabinet) for the Fir Covert Road roundabout and airport radar, that add a further £2m.

- 3.6. It should also be noted that the spend profile has also been adjusted to take account of the NSIP process, which has required more 'front end' work to deliver the planning application and this is therefore different to that which was set out in April 2012, which pre-dated the decision to follow the NSIP process. The main change in respect of this therefore is that the 2013/14 NCC costs have increased from £2m to £3.55m, however, correspondingly, the 2014/15 costs have been reduced by the same amount (i.e. £1.55m). There is no cost increase to the project as a consequence of the NSIP application, just a change to the spend profile.
- 3.7. The overall cost of the project has therefore changed and this is now £148.55m. The spend profile at Appendix C also reflects the timing of the draw down of the DfT funding for the Postwick Hub junction, which is anticipated to be able to commence in Spring 2014, but is subject to the Secretary of State confirming the Side and Slip Road Orders.
- 3.8. At its 16 September 2013 meeting, Council received a motion requesting that; 1) Subject to the outcome of the current consultation, submit an application for a Development Consent Order under the Planning Act 2008 in respect of the NDR as proposed, to allow the scheme to be implemented as soon as possible; and 2) Commission a report on the feasibility of providing a link across the Wensum Valley from the A1067 to the A47 southern bypass. In response, Cabinet set out that it remains committed to the delivery of the NDR from Postwick to the A1067 and would like to see this delivered as soon as possible. In addition, a feasibility study into possible connections between the A1067 and the A47 west of Norwich was agreed by Cabinet, with an expectation that Members and other stakeholders will be consulted on the scope of the feasibility study as soon as resources allow, accepting that key resources were currently focussed on delivering the first part of the motion.

4. **Resource Implications**

- 4.1. **Finance:** Funding for the Plan will come from a variety of sources, including the Local Transport Plan allocation, funding from developers, or through the Single Local Growth Fund and other opportunities such as any government funding bids. Implementation will be phased over 10-15 years as funding becomes available. The implementation plan has been largely designed around this phased approach although some of the larger schemes will require larger chunks of funding. The council is working with partners on how to deliver such schemes, including through its work on City Deals and the Single Local Growth Fund (SLGF). A NATS public transport package and Norwich Southern Bypass junctions have been identified as priorities for part-funding from the local major transport scheme element of the SLGF.
- 4.2. The County Council has previously agreed to underwrite £53m of the cost of the NDR, with the GNDP having committed in principle to provide up to £40m. In addition, in December 2012, Cabinet also agreed to add a further £5m of project cost following the results of the community consultation and associated changes to the project. DfT has also recently confirmed that any of the government funding for the project (amounting to some £86.5m in total) that extends outside of the current spending review period (i.e. 2015), will be paid to the Local Enterprise Partnership as part of the Local Growth Fund. Government will provide further detail of any further approval requirements for the release of these funds.

- 4.3. **NDR cost profile update:** The impact to the NDR of the changes made to finalise the scheme ready to submit to the Planning Inspectorate in November/December have been set out in section 3 above. The revised profile is therefore included in Appendix C and this shows a change of £2m to the overall cost of the NDR, amended to £148.55m. As set out above, there was previous agreement to underwrite £58.33m (£53.33m + £5m), with £40m committed in principle from the GNDP. The new profile therefore requires that Cabinet approve a revised underwritten amount of £60.34m.
- 4.4. **Staff:** Staff across the ETD Strategic Partnership and partners – particularly Norwich City Council – will be involved in taking the Plan forward for delivery. The NDR project continues to be staffed from the ETD Strategic Partnership and Birse Civils Ltd. For specific schemes, the feasibility, consultation and scheme delivery will be met from existing resources. A team capable of delivering the NDR and Postwick Hub has been identified and has the necessary support provided by partners Mott MacDonald.
- 4.5. **Property:** No implications arising from the Plan update. Implications may arise from specific scheme as they are brought forward for delivery. Landowner negotiations and land registry checks are continuing in relation to the NDR.

5. **Other Implications**

- 5.1. **Equality Impact Assessment (EqIA):** An EqIA was completed for NATSIP 2010. This has been reviewed and refreshed for the updated plan. It identified that transport is a major concern for key groups including disabled and older people. To mitigate negative impacts the implications should be considered in detail as and when projects are taken forward.
- 5.2. **Communications:** All appropriate communications will be undertaken as NSIP schemes undergo feasibility and delivery. A communications plan has been developed for the NDR and it identifies key stakeholders and mechanisms for making/ maintaining communication and this will continue to evolve and adapt as the project progresses.
- 5.3. **Health and Safety Implications:** The NDR and some NATSIP projects are subject to the Construction (Design and Management) Regulations (CDM) and the schemes are regularly assessed in accordance with these regulations by an appointed CDM Coordinator.
- 5.4. **Environmental Implications:** A Strategic Environmental Assessment was undertaken on NATSIP prior to its adoption in 2010. As it is not a new plan, and the only thing that has changed is to the phasing of schemes within the plan it is not intended to update the Strategic Environmental Assessment as the original remains fit for purpose. The statutory environmental bodies have been consulted on this proposed approach. One response was received, from Natural England, who agreed that the phasing of schemes within the plan is unlikely to result in a significant environmental effect.

The NDR project has included significant work in completing Environmental Impact Assessments and details of these will be included as part of the formal consent order process.

5.5. **Any other implications:** Officers have considered all the implications which members should be aware of. Apart from those listed in the report (above), there are no other implications to take into account.

6. **Section 17 – Crime and Disorder Act**

6.1. Requirements of the Act as it relates to the design and operation of the NDR and other NATS schemes will continue to be taken into account in the development of the projects.

7. **Risk Implications/Assessment**

7.1. In the context of the NATS implementation plan, key risks associated with the NDR and other NATS schemes are around funding and the statutory planning process. These risks are being managed through active project management and engagement. It has been confirmed that the NDR will be taken through the Nationally Strategic Infrastructure Projects route for planning consent, which will mitigate the risks around this.

8. **Overview and Scrutiny Panel Comments**

8.1. The NATSIP was considered by the ETDOS Panel on 26 September and NHAC on 19 September. Both meetings had similar discussions about the updated NATS Implementation Plan where Members discussed some of the detailed aspects of the plan; particularly in relation to their views regarding the city centre proposals. Members were reminded that the plan is not a new plan, but an update of the Implementation Plan agreed by Cabinet following extensive public and business consultation. Further detailed work to examine the implications of individual measures would be undertaken as and when these proposals are taken forward, at which point there will be opportunity for further Member engagement and discussion. At the Panel meeting, members also agreed that they would like to see the NDR construction started as soon as possible and therefore agreed April 2015 as their expected start date.

9. **Alternative Options**

9.1. NATSIP was adopted in 2010 following extensive testing of alternative options and extensive public consultation. This plan has been updated; the main changes being to phasing of delivery. As such, the Plan continues to include the package of measures that best meet objectives, have public and stakeholder support, and can be delivered within the likely available resources. Alternatives to the NDR have been examined through the Major Scheme Business Case process and further examination by DfT as part of the Development Pool bidding process.

10. **Reason for Decision**

10.1. NATSIP was adopted by the County Council in April 2010. It is important to keep the plan up to date to reflect the progress made on delivery and to ensure it continues to provide a guide to future delivery reflecting the growth plans for the area. The NDR is an essential element of the NATSIP and forms a key part of the Joint Core Strategy for the Norwich Policy Area. The decision to continue the development consent order application for the project is essential to be able to realise the full benefits of the Implementation Plan, to provide the transport infrastructure for

Norwich to enable its prosperity into the future, taking account of existing transport problems and accommodating future growth in housing and employment, which are essential to economic growth in Norfolk and vital to achieving LTP targets.

Recommendation / Action Required

- (i) Cabinet is asked to adopt the updated NATS Implementation Plan.
- (ii) Cabinet is asked to agree the revised NDR cost profile.
- (iii) Cabinet is asked to confirm it is content for the Development Consent Order for the finalised NDR scheme to be submitted.

Background Papers

County Council Cabinet reports dated 6 April 2010, 2 April 2012, 3 December 2012 and 2 September 2013.

David Allfrey (NDR)	01603 223292	david.allfrey@norfolk.gov.uk

If you need this report in large print, audio, Braille, alternative format or in a different language please contact 0344 800 8020 and ask for David Cumming or textphone 0344 800 8011 and we will do our best to help.

Appendix C

Project Delivery - Financial profile for Dual Carriageway NDR including Postwick Hub

	Financial Year							Total
	2012/13	2013/14	2014/15	2015/16	2016/17	2017/18	Future years	
Capital Spend Profile with identified funding sources shown below								
DfT			5.00	19.00	43.50			67.50
Postwick Hub CIF Funding		4.00	15.00					19.00
Growth Point Funding	1.36	0.35						1.71
NCC (LA Contribution) – Supported by GNDP funding up to £40m	1.81	3.55 (Note 1)	7.55	9.50	20.00	17.28	0.65* (Note 2)	60.34
TOTAL	3.17	7.90	27.55	28.50	63.50	17.28	0.65	148.55

Note 1 – The current year (13/14) profile has been amended from previous profile (£2m) and this has correspondingly reduced funding required in 14/15. This is taking into account the change of planning approach to the NSIP process, which requires earlier activities in its delivery compared with the Local Planning route, which was previously being considered when the previous profile was developed.

Note 2 – Remainder of airport radar funding costs to be spread over years from 18/19 to 22/23.

1 Key Summary

1.1 Introduction

- 1.1.1 Norfolk County Council proposes to construct the Norwich Northern Distributor Road (NDR). The NDR is a project of national significance which requires a Development Consent Order (DCO) under the Planning Act 2008.
- 1.1.2 The planning process for dealing with infrastructure projects which require a DCO was established by the Planning Act 2008, later amended by the Localism Act 2011. As a project which requires a DCO, pre-application consultations for the NDR have been undertaken in accordance with the Planning Act 2008.
- 1.1.3 This report details the pre-application consultations undertaken, the responses received during the consultations, the regard Norfolk County Council (in its capacity as promoter of the NDR) has given to these responses and the resulting changes that have been made to the NDR proposals. For the purposes of this report, Norfolk County Council, as promoter of the NDR, is referred to as "the applicant."
- 1.1.4 A reference guide summarising the pre-application consultation activity in chronological order is listed in Appendix C of this report. However the following tables provide the key activities undertaken and key dates for this consultation activity:

Date	Activity
19 April 2013	Commencement of Consultation with local authorities on draft SOCC.
18 May 2013	Deadline for responses to local authority consultation on SOCC.
21 June 2013	Notice of the SOCC published in the Eastern Daily Press and the Norwich Advertiser (both local newspapers) for a first time in accordance with Section

	47(6)(a).
28 June 2013	Notice of the SOCC published in the Eastern Daily Press and the Norwich Advertiser (both local newspapers) for a second time.
8 July 2013	Commencement of formal consultations under Section 47 of the 2008 Planning Act.
8 July to 12 August 2013	17 public exhibitions undertaken at various locations.
12 July 2013	Commencement of formal consultations under Section 48 of the 2008 Planning Act.
12 July 2013	Section 48 Notice placed in the Eastern Daily Press and the Norwich Advertiser (both local newspapers), the Times (a national newspaper) and the London Gazette in accordance with Regulation 4(2) of the Infrastructure Planning (Applications: Prescribed Forms and Procedure Regulations 2009).
12 July 2013	Notice placed in the Eastern Daily Press and the Norwich Advertiser (both local newspapers) advising of the release of the PEIR and where it could be viewed.
19 July 2013	Section 48 Notice placed in the Eastern Daily Press and the Norwich Advertiser (both local newspapers), the Times (a national newspaper) and the London Gazette in accordance with Regulation 4(2) of the Infrastructure Planning (Applications: Prescribed Forms and Procedure Regulations 2009).
19 July 2013	Notice placed in the Eastern Daily Press and the Norwich Advertiser (both local newspapers) advising of the release of the PEIR and where it could be viewed.
30 July 2013	Commencement of formal consultations under Section 42 of the Planning Act 2008.
30 July 2013	Section 42 consultation documents issued to local authorities, prescribed consultees and those with an interest in land.
20 September 2013	Consultation deadline for responses to Section 42,

	Section 47 and Section 48 consultations.
11 October 2013	Extended consultation deadline for additional Section 42 consultees.
11 October 2013	Commencement of further consultations with certain Section 42 consultees on refinements made to proposals.
13 November 2013	Consultation deadline for responses to the further consultation on refinements made to proposals.
18 November 2013	Extended consultation deadline for responses to consultation on refinements to the proposals and for additional consultees.

Table 1/1: Key Dates for Consultation Activity

Consultation	Key Activity
Section 47	<ul style="list-style-type: none"> • 17 public exhibitions held on varying dates between 8 July and 12 August 2013, and at various venues; • over 57,000 invitations and scheme information letters sent out to: <ul style="list-style-type: none"> ⇒ county/city/district councillors/MPs and MEPs whose constituencies were located within the area defined by the SOCC, ⇒ residential and business addresses located within the area defined by the SOCC, ⇒ stakeholders and interest groups; • details of exhibition boards placed on the applicant's web site; • scheme information documents (including the PEIR) placed on deposit at 17 local authority main offices and libraries; • publicity on radio and in newspapers of the exhibitions; • opportunity to provide comments by letter, e-mail, telephone, paper questionnaire and on-line

	questionnaire.
Section 48	<ul style="list-style-type: none"> • notices placed in 2 local newspapers, the Times and the London Gazette on 2 separate occasions; • notification of consultation and copy of notice sent to local authorities and prescribed consultees; • scheme information documents (including the PEIR) placed on the applicant's web site and deposited at 17 local authority main offices and libraries; • opportunity to provide comments by letter and e-mail.
Section 42	<ul style="list-style-type: none"> • information packages issued to 12 local authorities, 128 prescribed consultees and 1067 parties with an interest in land; • scheme information documents (including the PEIR) placed on the applicant's web site and deposited at 17 local authority main offices and libraries; • opportunity to provide comments by letter and e-mail.

Table 1/2: Key Consultation Activities

1.2 Section 47 and Section 48 Consultation Outcomes

1.2.1 The Section 47 and 48 consultations received 1492 responses, which is considered a good response rate and has allowed the local communities' main issues and views on the NDR to be identified. The key issues identified were as follows:

- (a) questions regarding the need for the NDR;
- (b) concern about the volume of development associated with the NDR;
- (c) suggestions on alternatives to the NDR such as improved public transport and cycle facilities;
- (d) suggestions on need for the NDR to provide a link between the A1067 and A47 to the west of Norwich;

- (e) suggestions on alternative routes for the NDR, including that it should be closer to the city;
- (f) support for the NDR being dual carriageway, rather than single carriageway, between Fir Covert Road and Fakenham Road;
- (g) comment that the Postwick Hub Junction is over complicated;
- (h) comment regarding the number of local road closures, including those on Holt Road, Church Street and Green Lane East/Broad Lane;
- (i) comment regarding the provision of the Middle Road Bridge, and the resulting affects to Middle Road;
- (j) comment regarding the number of roundabouts on the NDR;
- (k) comment regarding the new Drayton Lane link, and the closure of Drayton Lane at its junction with Reepham Road;
- (l) suggestions that the North Walsham Road/Crostwick Lane junction proposals are not appropriate and a roundabout/traffic signals are required;
- (m) suggestions for more NMU facilities and that the NDR may be a barrier to these users;
- (n) comment regarding the affects of the NDR on landscape, wildlife and agricultural land and also regarding the emissions/noise that it will be generated;
- (o) suggestions for specific routes that may experience increased traffic as a result of the NDR.

1.3 Section 42 Consultation Outcomes

1.3.1 A total of 103 responses were received from local authorities, prescribed statutory consultees and those with an interest in land as a result of the consultations.

1.3.2 The Section 42 consultations generally identified the key issues as being similar to those identified by the Section 47 and Section 48 consultations. However, the Section 42 consultations also identified the following key issues relating to the proposals:

- (a) the impact of the drainage proposals, and in particular the shape/position of drainage lagoons and concern the contaminants will leak into the ground water;
- (b) comment about the effects of the proposals on specific land interests.

1.4 Scheme Refinements Following Consultation

1.4.1 The applicant has given regard to the responses received from the Section 42, Section 47 and Section 48 consultations and has made a number of minor refinements to the scheme proposals. It has undertaken further localised consultations on these refinements (those persons that may be affected by the refinements) and given regard to the responses received before finalising the application proposals.

1.5 Conclusions

- 1.5.1 The applicant considers that the DCO pre-application consultation has been carried out in accordance with the requirements of the Planning Act 2008. This consultation process has ensured that the key issues associated with the proposals have been identified.
- 1.5.2 The applicant does not consider that the pre-application consultation is the end of public engagement, and will continue to engage with local authorities, statutory organisations, those with land interests and the local community during the remainder of the scheme development and construction.

2 Background

2.1 Introduction

2.1.1 This Section 37 Consultation Report has been prepared by the applicant. It has been prepared to accompany the application for a Development Consent Order (DCO) to be submitted to the Secretary of State for Transport. The application for a DCO is to authorise the development and operation of a dual carriageway all-purpose strategic distributor road known as the Northern Distributor Road (NDR).

2.1.2 This report has been developed in accordance with Part 5, Chapter 1, Section 37(3)(c) of the Planning Act 2008. As such, this report provides:

- (a) an account of the statutory consultation, publicity and community consultation activities undertaken by the applicant at the pre-application stage and details of deadlines set for consultation responses in accordance with Section 42, Section 47 and Section 48 of the Planning Act 2008;
- (b) a summary of the relevant responses to the separate strands of consultation;
- (c) the account taken of responses in developing the application for the NDR from proposed to final form, as required by Section 49(2) of the Planning Act 2008.

2.1.3 This chapter provides a brief summary of the NDR proposals presented for pre-application consultation. It also sets out Norfolk County Council's role as the applicant, highway authority and prescribed consultee under the Planning Act 2008, and its location relative to neighbouring authorities (who are relevant to the proposals). The applicant has to consult with certain authorities under the Planning Act 2008.

2.2 Structure of this Report

2.2.1 The following table details the structure of this report and provides a brief outline of the contents of each chapter.

Chapter	Description
1 Key Summary	This chapter provides an overview of this report and summarises the key issues identified as a result of the pre-application consultations.
2 Background	This chapter provides a brief summary of the NDR proposals presented for pre-application consultation and its location relative to the local authorities.
3 Previous Consultations Prior to Planning Act 2008 Pre-Application Consultations	This chapter details the consultations undertaken prior to the Planning Act 2008 pre-application consultations and how they have influenced the scheme proposals.
4 Pre-Application Consultation Strategy	This chapter details the statutory pre-application consultations undertaken and how these have met the requirements of the Planning Act 2008.
5 Section 47 and Section 48 Consultation Responses	This chapter details the results of the consultations undertaken under Section 47 and Section 48 of the Planning Act 2008.
6 Section 42 Consultation Responses	This chapter details the results of the consultations undertaken with local authorities, prescribed consultees and those with interest in land (as defined by Section 44 of the Planning Act 2008) under Section 42 of the Planning Act 2008.
7 Further Consultations	This chapter details the results of further consultation on refinements to the proposals.
8 Conclusion and Summary	This chapter details conclusions from the consultations, identifying the key issues, and summarising the refinements made as a result of the pre-application consultations.

Table 2/1: Structure of this Report

2.3 Background to NATS and the NDR

- 2.3.1 The Norwich Area Transportation Strategy (NATS) was originally developed in the 1970's and has been revised in 1991, 1998 and 2004. The original strategy recognised that car use could not continue unrestrained, and that public transport needed priority to be effective. At this time Norfolk County Council had reservations about the strategy and did not sign up to it.
- 2.3.2 Following extensive assessment work by consultants the revised NATS was published in 1991 and included Park and Ride and a number of road schemes. However, the NDR (as put forward by the consultants) was not included in the adopted strategy, with Norfolk County Council requesting that more work be undertaken on its viability.
- 2.3.3 In 1994 public consultation on the initial NDR options was carried out as part of the Norwich Area Review of the Norfolk Structure Plan. At this stage no commitment was made to pursue the NDR until the feasibility of alternatives had been assessed, including resolving issues at the eastern and western ends of the route.
- 2.3.4 During 1996 and 1997, NATS came under revision again. This was in light of changes to government policy and the funding situation since the previous strategy. During the 1990s 'green' issues had come much more to the fore and money was not being made available for large schemes. This review led to the adoption of the new strategy, which was published in 1998. The adopted strategy had many themes and strategies including a Park and Ride network, bus priorities and public transport improvements, traffic management schemes, parking restraint and pedestrian/cycle facilities. At this stage, and considering the then government policy guidance and lack of government funding for transport schemes, the NATS did not include an NDR.
- 2.3.5 NATS was reviewed again in 2002. The reasons for the review were the changes in government policy, but the revised NATS was also informed by:
- (a) housing and economic growth;

- (b) developments along the inner and outer ring roads;
- (c) growth at Norwich International Airport;
- (d) delivery of some of the Park and Ride sites;
- (e) traffic congestion and public criticism of local transport policies being anti-car.

- 2.3.6 Consultations on the revised NATS were undertaken in 2003 and asked whether the public supported the NDR. The consultation indicated strong local support for the NDR with 78% of respondents being in favour. It should be noted that this response was to a full NDR between the A47 at Postwick and the A47 to the west of Norwich.
- 2.3.7 The overall strategy for the revised NATS was agreed in 2004. It recognised the Norwich area as a centre where growth would be focussed and therefore the strategy looked to provide the essential infrastructure needed to accommodate this growth, including a Northern Distribution Road.
- 2.3.8 However, further work needed to be carried out on the proposals for an NDR, including an appraisal of the alternative routes suggested during the 2003 public consultations. Subsequent consultations in 2004 sought specific views on route options for the NDR to the east and west of the A140 Cromer Road. These included additional options further west of Norwich not included in the 2003 consultations. Regard was given to the consultation responses and also the response of statutory environmental bodies (at that time these were Environment Agency, English Nature and the Countryside Agency) regarding the impact of routes on the River Wensum Special Area of Conservation (SAC).
- 2.3.9 Further local consultations were undertaken in 2005 on the western most route options in the Western Longville area. Assessments were also undertaken on mitigation measures for all eastern and western route options and the impacts on the River Wensum SAC.

- 2.3.10 At its meeting on 19 September 2005 the applicant's Cabinet considered the responses to the consultations described and the assessment of the mitigation measures for the River Wensum and agreed an adopted route for the NDR. This route was between the A47 at Postwick and the A1067 near Attlebridge (i.e. no link between the A1067 and A47).
- 2.3.11 Between 2005 and 2008 the proposals for the adopted route were developed further and in July 2008 a Major Scheme Business Case submission was made for the NDR to the Department for Transport (DfT).
- 2.3.12 During 2008 work, including consultations, was undertaken on an Implementation Plan for NATS – it was adopted in November 2009. This work aimed to show what the strategy meant on the ground and was linked closely to the Joint Core Strategy (JCS) for the Greater Norwich Area that was being prepared at the time.
- 2.3.13 In September 2011 the applicant had to re-submit its business case for the NDR following the government's comprehensive spending review. The final bid was approved by the DfT with reconfirmation of Programme Entry in December 2011 for the NDR between the A47 at Postwick (including the Postwick Hub junction) and the A140 Cromer Road. At its meeting on 2 April 2012 the applicant's Cabinet agreed to underwrite the cost of providing the NDR to the A1067 Fakenham Road near Attlebridge
- 2.3.14 Subsequent consultations in April/May/June 2012 and February/March 2013 helped to refine the proposals prior to commencement of the statutory pre-application consultations detailed in this report.

2.4 The Scheme

- 2.4.1 The proposed development, the Norwich Northern Distributor Road (NDR), is a predominantly dual carriageway all-purpose strategic distributor road, which would link the A1067 Fakenham Road, near Attlebridge to the A47(T) at Postwick. This would be over a length of approximately 20.4km. Appendix A of this report contains a plan showing an outline of the route.

2.4.2 The detailed description of the scheme is contained in Volume 1 Chapter 2 of the Environmental Statement (Document Reference 6.1).

2.5 Development Consent Order Application and the Applicant

2.5.1 The DCO application is submitted by Norfolk County Council, in its capacity as highway authority.

2.5.2 If made, the DCO would authorise the construction, operation and maintenance of the NDR and the work associated with connecting it to the existing highway network. It would also authorise the compulsory acquisition of all the land and/or rights required to do this.

2.5.3 In addition to being the DCO applicant, Norfolk County Council is also a prescribed consultee as defined by Schedule 1 of the Infrastructure Planning (Applications: Prescribed Forms and Procedures) Regulations 2009.

2.5.4 During the pre-application process, clear boundaries have been maintained between these two roles, which were helped by the establishment of internal structures defining two separate teams, one fulfilling the role of applicant and the other the role of consultee. The internal structure, within part of the Department of Environment, Transport and Development, is summarised by the following chart.

2.5.5 In order to distinguish between the two roles of Norfolk County Council, references in this report to "the applicant" means Norfolk County Council in its capacity as the local highway authority and promoter of the NDR.

2.6 Other Local Authorities

2.6.1 In summary, Section 43 of the Planning Act 2008 defines local authorities as being:

- (a) a category "B" authority is one in whose administrative area the application land is situated and the authority is a unitary or a lower-tier authority;
- (b) a category "A" authority is one where any part of the boundary of A's area is also a part of the boundary of B's area;
- (c) a category "C" authority is one in whose administrative area the application land is situated and the authority is an upper-tier authority;
- (d) a category "D" authority is an authority that is not a lower-tier authority and where any part of the boundary of D's area is also a part of the boundary of C's area.

2.6.2 There are further detailed criteria to be considered in relation to the status of the authority which determines whether it needs to be consulted by the applicant under the Planning Act 2008. Applying these criteria, the relevant local authorities for the NDR are detailed in the table below.

Category "B"	Local Authority
Category "B" authority is where the application land is in the authority's area and the authority is a unitary or a lower-tier authority.	<ul style="list-style-type: none"> • Broadland District • Norwich City Council
Category "A"	Local Authority
Category "A" authority is where any part of the boundary of A's area is	<ul style="list-style-type: none"> • Breckland District Council • North Norfolk District Council

also a part of the boundary of B's area.	<ul style="list-style-type: none"> • South Norfolk Council • Great Yarmouth Borough
Category "C"	Local Authority
Category "C" authority is where the land is in the area of an upper-tier county council.	<ul style="list-style-type: none"> • Norfolk County Council
Category "D"	Local Authority
Category "D" authority is an authority that is not a lower-tier authority and where any part of the boundary of D's area is also a part of the boundary of C's area.	<ul style="list-style-type: none"> • Cambridgeshire County Council • Lincolnshire County Council • Suffolk County Council
Category other than A-D	Local Authority
An authority which is not defined in Section 43(3) as a "lower-tier district council", a "unitary council" and an "upper-tier county council" and where the land is in the area of that authority.	Local Authority <ul style="list-style-type: none"> • Broads Authority

Table 2/2: Details of Neighbouring Local Authorities

2.6.3 In addition, the applicant also consulted Waveney District Council pursuant to Section 42. Although consultation with Waveney was not required (because whilst Waveney shares a boundary with both Norfolk County Council and with the Broads Authority, Waveney is not a Category "D" local authority for the purposes of Section 43(2A) of the Planning Act 2008 and the Broads Authority is not a "lower-tier district council" for the purposes of Section 43(2)(a) of the Planning Act 2008 the applicant decided to consult Waveney for completeness.

2.6.4 Although the relevant legislation only requires the applicant to consult parish councils in whose area the scheme will be located, the applicant has adopted similar principles as for local authorities and also consulted 'neighbouring' parish councils. The table below details these parish councils.

Category “B” parish council is where the application land is in the authority’s area.	Category “A” parish council is where any part of the boundary of A’s area is also a part of the boundary of B’s area.		
<ul style="list-style-type: none"> • Attlebridge • Taverham • Drayton • Horsford • Horsham and Newton St Faith • Spixworth • Beeston St Andrew • Sprowston • Rackheath • Gt and Lt Plumstead • Postwick with Witton • Crostwick • Norwich 	<ul style="list-style-type: none"> • Surlingham • Keswick and Intwood • Caistor St Edmund • Bawburgh • Colney • Cringleford • Bixley • Trowse with Newton • Kirby Bedon • Bramerton • Costessey • Felthorpe • Frettenham 	<ul style="list-style-type: none"> • Stratton Strawless • Salhouse • Blofield • Woodbastwick • Brundall • Ringland • Morton on the Hill • Hellesdon • Spixworth • Swannington with Alderford and Lt • Witchingham • Hainford 	<ul style="list-style-type: none"> • Sprowston • Wroxham • Horstead with Stanninghall • Old Catton • Norton Subcourse • Langley with Hardley • Cantley • Strumpshaw • Carleton St Peter • Claxton • Rockland St Mary

Table 2/3: Details of Parish Councils Consulted

2.6.5 The plans in Appendix G of this report show the locations of these authorities and how they fit into the above categories.

2.7 Compliance with Legislative Requirements

2.7.1 As explained in the Introduction to the Application (Document Reference 1.1), the NDR is an infrastructure project for which a DCO is required. On 9 August 2013, the Secretary of State for Transport made a Direction (the Direction) pursuant to the powers in Section 35 of the Planning Act 2008, which directed that the NDR is "to be treated as development for which development consent is required."

2.7.2 The Direction was made during the applicant's formal pre-application consultation under the Planning Act 2008. The Planning Inspectorate has requested that the applicant explain how the pre-application consultation complies with the Planning Act 2008 requirements and specifically the

relevance of the Direction and any impact on the lawfulness of the pre-application consultation carried out.

2.7.3 The applicant considers that the pre-application consultation was validly carried out and that it complied with the requirements of Part 2 of Chapter 5 of the Planning Act 2008. Attached as Appendix D to this report is a Legal Opinion from the applicant's Counsel, explaining why there are no issues in relation to the validity of the pre-application consultation that has been undertaken by the applicant simply because some of it preceded the making of the Direction.

2.7.4 A brief summary of this reasoning is set out below.

Brief chronology of events

2.7.5 In December 2012, the applicant decided to promote the NDR as a Nationally Significant Infrastructure Project (NSIP). At that time the NDR fell within the definition of a NSIP set out in Section 22(2) of the Planning Act 2008 (as it then was) because it included works to the Postwick junction of the A47(T) and was to be constructed for a purpose connected with the A47(T).

2.7.6 Publication of the notice stating where and when the SOCC could be inspected took place on 21 June 2013 and on 28 June 2013, with the first publication exhibition held on 8 July 2013. The Section 48 Notices were published on 12 July 2013 and 19 July 2013. The programme of public exhibitions ran until 12 August 2013. Section 42 consultation letters were issued on 30 July 2013 and representations under all three strands of consultation were invited until 20 September 2013. Further information on the consultation is set out in the rest of this Consultation Report.

2.7.7 On 24 July 2013 the Highway and Railway (Nationally Significant Infrastructure Project) Order 2013 (S.I. 2013/1883) (the Highways Order) was made and the Order came into force on 25 July 2013. This was some weeks after the start of the statutory consultation process referred to above. The Order amended Section 22 of the Planning Act 2008 so that a project such as

the NDR would not (from 25 July 2013 onwards) fall within the definition of a NSIP.

2.7.8 On 25 July 2013, the applicant submitted a qualifying request to the Secretary of State for a direction under Section 35(1) of the Planning Act 2008 that the NDR was a project of national significance and so should be treated as development for which development consent was required.

2.7.9 As noted above, on 9 August 2013 the Secretary of State made the Direction under Section 35 Planning Act 2008 that the NDR was a project of national significance and was to be treated as development for which development consent was required. In addition the Secretary of State directed that “any proposed application in relation to the NDR is to be treated as a proposed application for which development consent is required”.

Validity of pre-application consultation

2.7.10 It is undoubtedly the case that the effect of the Direction is to make the NDR a development project for which a DCO is required if it is to be authorised.

2.7.11 There are no issues in relation to the validity of the pre-application consultation that has been undertaken by the applicant under the Planning Act 2008 for the following reasons:

- (a) there is no practical distinction between a NSIP and a project that is the subject of a direction under Section 35(1) of the Planning Act 2008. The means by which development consent is granted is the same in both cases and is via a DCO: Section 37(1) of the Planning Act 2008;
- (b) a NSIP and a project that is the subject of a direction under Section 35(1) of the Planning Act 2008 have to progress by following the procedures in Part 5 (pre-application) and Part 6 (post-application) of the Planning Act 2008. The pre-application procedure in Part 5 of the Planning Act 2008 applies to both without distinction;
- (c) the Direction made in respect of the NDR includes a further direction under Section 35ZA(3)(b) of the Planning Act 2008, namely that “any

proposed application in relation to the [NDR] is to be treated as a proposed application for which development consent is required”;

- (d) the only “proposed application” that this further direction can relate to is the proposed application for a DCO that the applicant has been progressing since December 2012. That proposed application would only fall within Section 35ZA(3)(b) of the Planning Act 2008 if the Secretary of State was of the view that it was an application for a consent “mentioned” in Section 33(1) or Section 33(2) of the Planning Act 2008. Of the consents “mentioned” in those provisions, the only one that is applicable is a “development consent” itself;
- (e) the effect of this further direction is that the applicant’s proposed application for a DCO, which has been at the pre-application stage since early 2013, is “to be treated as a proposed application for development consent” for all of the purposes of the Planning Act 2008. This includes the provisions of the Planning Act 2008 which deal with pre-application consultation. Thus, all of the actions that have been taken by the applicant as part of its preparation of its “proposed application” (including, therefore, all of its pre-application consultation under Section 42, 47 and 48 of the Planning Act 2008) are to be treated as actions that relate to the proposed application that must now be made for development consent as a result of the Direction.

2.7.12 For these reasons, there are no issues in relation to the validity of the pre-application consultation that has been undertaken by the applicant simply because some of it preceded the making of the Direction. Furthermore, given the further direction that has been made under Section 35ZA(3) of the Planning Act 2008, there are no reasons why the applicant cannot rely on its pre-application consultation in support of the DCO application in respect of the NDR.

- 2.7.13 The applicant notes that the Direction makes reference to the NDR improving connections to/from the Norwich International Airport, Gt Yarmouth Enterprise Zone and the strategic road network. Whilst these are locations beyond the area of consultation defined by its SOCC, the applicant considers that the rationale for consultation was and is still appropriate. This rationale was that the consultation should be aimed at the NDR proposals that are to be the subject of the DCO and so should be kept to a manageable size, and should engage those most affected whilst ensuring that the main issues are embraced.
- 2.7.14 Whilst the NDR is expected to benefit wider areas, including improved connections between Norwich and the Great Yarmouth Enterprise Zone and between Norwich and the Strategic Road Network, no material impacts have been identified on either the Enterprise Zone or on the parts of the Strategic Road Network beyond the consultation area.
- 2.7.15 It is also worth noting that Broadland District Council has confirmed that the consultation carried out has been adequate for the proposed application. In addition, Norfolk County Council, Norwich City Council, the Broads Authority, Great Yarmouth Borough Council, Waveney District Council, and the New Anglia Local Enterprise Partnership (which is responsible for the Enterprise Zone) were also consulted. Great Yarmouth Borough Council did not submit any response. Norfolk County Council, Norwich City Council, and Waveney District Council (which includes Lowestoft where parts of the Enterprise Zone are situated) confirmed that they had no objections to the NDR. The Broads Authority welcomed the route of the proposed NDR and the New Anglia LEP responded that it supported the NDR. The details of the responses are set out in Appendix T of this report.
- 2.7.16 The planning process for dealing with infrastructure projects which require Development Consent Orders (DCO) was established by the Planning Act 2008, later amended by the Localism Act 2011.

2.7.17 As a project which requires a DCO, pre-application consultations for the NDR have been undertaken in accordance with the Planning Act 2008, the requirements of the Infrastructure Planning (Environmental Impact Assessment) Regulations 2009 and the Infrastructure Planning (Applications: Prescribed Forms and Procedures) Regulations 2009, together with guidance issued by the Planning Inspectorate and the Department for Communities and Local Government.

2.7.18 The Planning Inspectorate's "Advice Note 14: Compiling the consultation report" provides advice on how the applicant's pre-application consultation is reported. The table below summarises the key advice given in the note and where this advice has been incorporated into this report.

Explanatory Text	
Planning Inspectorate Advice Note 14	Location in this Report
Explanatory text should set the scene and provide an overview and narrative of the whole pre-application stage as it relates to the particular project.	Explanatory text is contained in Sections 2.3, 2.7, 3 and 4.1.2 of this report.
It would assist if a quick reference guide in bullet form, summarising the consultation activity in chronological order, is included near the start of the report.	This list of full consultation activity is contained in Appendix C of this report. A quick reference guide is contained in Section 1.4 of this report.
Consultation with the Prescribed Consultees (Section 42, Planning Act 2008)	
Planning Inspectorate Advice Note 14	Location in this Report
This includes prescribed statutory bodies, local authorities consulted under Section 43 of the Planning Act 2008 and those with an interest in the land consulted under Section 44 of the Planning Act 2008. Three separate strands of	Consultation with these bodies is described in Section 4.2-4.8, 4.9 and 4.12-4.13 of this report.

prescribed consultees should be clearly identified.	
The applicant should provide a full list of Section 42 (Planning Act 2008) prescribed consultees as part of the consultation report.	Appendix F-2 of this report contains a list of Section 42 prescribed consultees.
A short description of how Section 43 of the Planning Act 2008 has been applied should be provided in order to identify the relevant local authorities included in the consultation. This should be supported by a map.	Section 2.6 of this report describes how local authorities have been identified. Maps showing the administrative boundaries are contained in Appendix G of this report.
It is important that those with an interest in land consulted under Section 44 of the Planning Act 2008 are identified as a distinct element of the Section 42 consultation.	Appendix H-2 of this report contains a list of the Section 44 consultees.
Statement of Community Consultation Process (Section 47 of the Planning Act 2008)	
Planning Inspectorate Advice Note 14	Location in this Report
It would be helpful to provide a summary of the rationale behind the SOCC methodology.	Section 4.4 of this report details the rationale behind the SOCC.
Evidence should be submitted which shows the local authorities consulted on the SOCC, what the local authority comments were, confirmation that they were given 28 days to provide their comments and a description about how the applicant had regard given to the comments received.	Appendix I-1 of this report details the local authorities consulted on the SOCC. Appendix I-2 of this report details the responses received. Section 4.3.4 of this report details the local authority comments on the draft SOCC and the regard given to them.

<p>Copies of the published SOCC as it appeared in the press should be provided along with which local newspapers it was published in and when.</p>	<p>Section 4.3.5 of this report details the dates and newspapers that notice of the SOCC was published in.</p> <p>Appendix L of this report contains copies of the notices as they appeared in the newspapers and on-line.</p>
<p>Where there are any inconsistencies with the SOCC, then these should be clearly explained and justified.</p>	<p>Section 4.6 of this report details the inconsistencies with the SOCC.</p>
<p>Statutory Publicity (Section 48 of the Planning Act 2008)</p>	
<p>Planning Inspectorate Advice Note 14</p>	<p>Location in this Report</p>
<p>A copy of the Section 48 Notice as it appeared in the local newspapers, together with a description of when and where it was published and confirmation of the time period given for responses should be included in the report.</p>	<p>Section 4.9 of this report details the dates and newspapers that the Section 48 Notice was published in.</p> <p>Appendix M of this report contains copies of the notices as they appeared in the newspapers and on-line.</p>
<p>Applicants should provide confirmation that the Section 48 Notice was sent to the prescribed consultees at the same time that the notice was published.</p>	<p>Appendix N of this report details the notification of the Section 48 Notice.</p>
<p>Non Statutory 'informal consultation'</p>	
<p>Planning Inspectorate Advice Note 14</p>	<p>Location in this Report</p>
<p>Any consultation not carried out under the provisions of the Planning Act 2008 should be indicated and identified separately in the report</p>	<p>Section 3.0 of this report details the non statutory consultations undertaken prior to the consultations carried out under the provisions of the Planning Act 2008. Section 4.10 also</p>

	outlines other non statutory consultations undertaken.
EIA Regulations Consultation	
Planning Inspectorate Advice Note 14	Location in this Report
Applicants may wish to draw attention to the consultation responses received under the EIA process.	Details of consultations and discussions under the EIA process are contained in each of the relevant chapters of the Environmental Statement (Document Ref 6.1).
Issues led approach	
Planning Inspectorate Advice Note 14	Location in this Report
If the level of response is significant it may be appropriate to group responses under headline issues.	This approach has been adopted for the presentation of responses. Section 5.2.3 of this report details how responses have been grouped.
Summary of Responses	
Planning Inspectorate Advice Note 14	Location in this report
A list of individual responses received should be provided and categorised in an appropriate way.	Given the volume of Section 47 and 48 responses received, they have been grouped into categories of similar issues and detailed in Appendix S of this report. Individual comments to the Section 42 consultations are contained in Appendix T and Appendix U of this report.

Table 2/4: Compliance with PINS advice

2.7.19 The Department for Communities and Local Government Guidance “Planning Act 2008 – Guidance on the pre-application consultation process” also

includes guidance on the consultation report. The table below summarises the key advice given and where this advice has been incorporated into this report.

Explanatory Text	
DCLG Guidance	Location in this Report
The consultation report should provide a general description of the consultation process undertaken.	Tables 1/1 and 1/2 in Section 1.1.4 contain a summary of the consultation activity.
Compliance with Planning Act 2008	
DCLG Guidance	Location in this Report
The consultation report should set out specifically what the applicant has done in compliance with the requirements of the Planning Act, relevant secondary legislation, this guidance, and any relevant policies, guidance or advice published by Government or the Inspectorate.	Sections 2.7 and 4 detail the compliance with the requirements of the Planning Act 2008.
SOCC Consultation	
DCLG Guidance	Location in this Report
The consultation report should set out how the applicant has taken account of any response to consultation with local authorities on what should be in the applicant's statement of community consultation.	Section 4.3 details the local authority responses to consultation on the SOCC and the regard given to them by the applicant. Copies of the actual responses received are contained in Appendix I-2 of this report.
Summary of Responses	
DCLG Guidance	Location in this Report
The consultation report should set out a summary of relevant responses to	Summaries of the relevant responses are contained in

consultation (but not a complete list of responses).	Appendix S, T, U and X of this report. Sections 5 and 6 identify the key issues raised.
Regard Given to Responses	
DCLG Guidance	Location in this Report
The consultation report should provide a description of how the application was influenced by those responses, outlining any changes made as a result and showing how significant relevant responses will be addressed.	The regard given the responses received are contained in Appendices S, T, U and X of this report.
The consultation report should provide an explanation as to why responses advising on major changes to a project were not followed, including advice from statutory consultees on impacts which the applicant has not followed	The regard given the responses received are contained in Appendices S, T, U and X of this report and explain why suggested changes to the project have not been followed.
Allowing Secretary to State to Understand Consultation Process	
DCLG Guidance	Location in this Report
The consultation report should be expressed in terms sufficient to enable the Secretary of State to fully understand how the consultation process has been undertaken and significant effects addressed. However, it need not include full technical explanations of these matters.	The overall consultation activity is described, in chronological order, in Appendix C of this report. The separate consultation activity under Sections 42, 47 and 48 of the Planning Act 2008 are described separately in Section 4 of this report.

Table 2/4: Compliance with DCLG Guidance

3 Previous Consultations Prior to Planning Act 2008 Pre-Application Consultations

3.1 Introduction

3.1.1 Extensive consultations on the Norwich Area Transportation Strategy (NATS), including the NDR, have been undertaken since 2003. The most recent rounds of consultation were in April/May/June 2012 and February/March 2013. During these consultations the applicant has listened to what local residents and other interested parties had to say, and changed the emerging NDR proposals as a result of responses received. This chapter outlines the consultations on the NDR, and how these have resulted in changes to the proposals. A summary of this activity is contained in Appendix B of this report.

3.1.2 All consultations detailed in this chapter (i.e. described in Sections 3.2, 3.3 and 3.4) were non-statutory consultations but were used to develop the final scheme proposals that were presented for the Section 42, 47 and 48 statutory consultations.

3.2 Consultations Prior to 2012

3.2.1 An outline of the consultations prior to 2012 and the main decisions taken as a result of the responses is given below:

Year	Description	Main Action in relation to Issue
2003	Consultations within the Norwich area (which included parts of the consultation area outlined in the SOCC) on the Norwich Area Transportation Strategy (NATS) and route options for the NDR between the A47 to the east of Norwich and the A47 to the west of Norwich. This included	Over 21,000 responses were received to this consultation. It helped to identify the concerns of environmental organisations about the potential impact of an NDR on the Tud and Wensum Valleys (i.e. the link to the A47 west of Norwich). The applicant concluded that route options should be subject

	<p>leaflets to over 130,000 households/businesses, consultation materials sent to stakeholders/interest groups and exhibitions in locations across the Norwich area.</p>	<p>to further consultation.</p>
2004	<p>Further consultations within the Norwich area (which included parts of the consultation area outlined in the SOCC) on route options for the NDR between the A47 to the east of Norwich and the A47 to the west of Norwich. This included the circulation of a brochure/questionnaire to over 130,000 households/businesses in the Greater Norwich Area as well as Norfolk parish/town councils, statutory bodies, utility companies and stakeholder groups. 6 staffed public exhibitions were held in areas around Norwich.</p>	<p>A total of 10,092 responses were received to this consultation. Following consideration of the responses received the applicant concluded to undertake further work to examine mitigation measures for all eastern and western route options and the impact on the River Wensum Special Area of Conservation (i.e. the link to the A47 west of Norwich). The applicant also concluded to undertake further local consultations on the westernmost route options.</p>
2005	<p>Consultations in the area of Weston Longville on the two western most route options. Over 400 residents in the Hockering/Weston Longville/Attlebridge area and were consulted together with local parish councils. It included a single public exhibition.</p>	<p>198 responses to this consultation were received of which the main comments were objecting to the routes or commenting that the routes were too far west.</p> <p>The responses received during this and previous consultations, together with other route assessment work were considered when the applicant decided that the route for the NDR should be from the A47 at</p>

		Postwick to the A1067 Fakenham Road (i.e. with no NDR link between the A47 to the west of Norwich and the A1067). The decision not to include an A1067 to A47(w) link was due to the potential ecological impacts of crossing the River Wensum Special Area of Conservation.
2006 – 2008	On going meetings with parish councils along the corridor of the proposed NDR route to give an opportunity to raise issues or concerns.	None.
2007 - 2008	Further exhibitions in parishes along the corridor of the proposed NDR route giving information on the project's development, including an exhibition in Postwick regarding the plans for the Broadland Gate Development (a new business park on land to the east of the existing Broadland Business Park).	None.
2009	Consultations between October and November 2009 in the Norwich area (which included parts of the consultations area outlined in the SOCC) on the Implementation Plan for NATS. This set out the interventions (including the NDR) to improve access within the Norwich area and to encourage a modal shift onto more sustainable transport	The consultation received over 11,500 responses with over 1,000 people attending the exhibitions.

	<p>systems. The consultations included over 160,000 booklets to households/businesses and 17 exhibitions.</p>	
--	---	--

Table 3/1: Summary of Consultation Prior to 2012

3.3 Public Consultations – April/May/June 2012

- 3.3.1 A Major Scheme Business Case submission for the NDR to the Department for Transport (DfT) was submitted in July 2008. In December 2009 the part of the NDR between the A47 east of Norwich and the A140 Cromer Road was formally granted Programme Entry and thereby included in the DfT's programme for future funding.
- 3.3.2 However, the government's comprehensive spending review resulted in an examination of funding commitments by the DfT, which resulted in the NDR being placed within a pool of schemes requiring a new funding bid.
- 3.3.3 In September 2011 the applicant resubmitted a bid for funding from the DfT's Development Pool bid. The final bid was approved by the DfT with reconfirmation of Programme Entry in December 2011 for the NDR between the A47 at Postwick (including the Postwick Hub junction) and the A140 Cromer Road. At its meeting of 2 April 2012, the applicant's Cabinet agreed to underwrite the cost of providing the NDR to the A1067 Fakenham Road near Attlebridge.
- 3.3.4 Following this reconfirmation a series of 14 public exhibitions were held in parishes along the corridor of the NDR to enable people living close to the NDR to see the latest proposals and give feedback. In order to publicise the public exhibitions a flyer was sent out to all individuals and stakeholders listed on the existing NDR consultation list, (comprising of over 1,400 consultees). It was also sent to all Norfolk parish councils. Meetings were held with parish councils and various stakeholders.

3.3.5 Over 1228 people attended the exhibitions and a total of 510 responses to the consultation were received. The key findings from these consultations and how they influenced the ongoing development of the NDR proposals (at that time) is detailed in the table below:

Key Issue Raised	Applicant's Action in Relation to Issue
150 responses indicated that the NDR should link all the way to the A47 to the west of Norwich.	This had been considered during the earlier consultations. The applicant had decided not to include a link between the A1067 and A47 due to the potential for ecological impacts of crossing the River Wensum Special Area of Conservation.
52 responses commented that there was not enough provision for walkers, cyclists and horse riders.	As a result of the consultations, further examination of the provision made for non motorised users (NMUs) was undertaken. This resulted in additional facilities such as new sections of bridleway adjacent to the route of the NDR being added to the proposals.
44 responses expressed concern over the closure of the A1067 Fakenham Road where it joined the NDR and the resulting effects on Reepham Road through Hellesdon (the proposals presented for consultation in 2012 did not include the now proposed A1067 Fakenham Road Roundabout but had Fakenham Road leading directly onto the NDR). 2 responses were in favour of the closure.	Following further consideration the NDR proposals were amended at this stage through the provision of a roundabout where the NDR meets the A1067 Fakenham Road, and the removal of the proposed roundabout providing a connection between the NDR and Fir Covert Road.
24 responses provided suggestions to discourage traffic from using Reepham Road as a result of the	Following further consideration the NDR proposals were amended at this stage through the provision of a roundabout where the NDR meets

<p>NDR, particularly through Hellesdon.</p>	<p>the A1067 Fakenham Road, and the removal of the proposed roundabout providing a connection between the NDR and Fir Covert Road.</p>
<p>10 responses did not support the closure to general traffic of Middle Road, Low Road and Smee Lane (the proposals presented for this consultation in 2012 included closures of Smee Lane and Middle Road where they meet the NDR, and a NMU and agricultural vehicle bridge over the NDR at Low Road). 9 responses were in favour of the closure.</p>	<p>As a result of the consultations the proposals were amended to provide closures to Smee Lane and Low Road, with an all user bridge being provided over the NDR at Middle Road. Middle Road was identified as the most appropriate road out of these three roads for an all user bridge because it was a better standard than Low Road and Smee Lane.</p>
<p>16 responses expressed concern over the closure of Church Street between Horsford and Horsham St Faith (the proposals presented for this consultation in 2012 included the closure of Church Street at its junction with the A140 Cromer Road). 2 responses were in favour of the closure.</p>	<p>As a result of the comments received, the applicant decided to remove this closure and monitor the road after implementation of the NDR with consideration to implementing the closure if appropriate.</p>
<p>13 responses made comments regarding the volume of traffic using the A1067 Fakenham Road/Beech Avenue/Fir Covert Road junction.</p>	<p>These concerns generally related to the closure of the A1067 Fakenham Road where it meets the NDR with the result that vehicles wishing to access Fakenham Road through Taverham/Drayton would have to do so via the NDR and Fir Covert Road. The provision of the roundabout at Fakenham Road, where it joins the NDR, addressed these concerns.</p>
<p>10 responses expressed concern regarding the effect to businesses of the closure of Fir Covert Road at its junction with Reepham Road. 2</p>	<p>The removal of the Fir Covert Road Roundabout and its replacement with the roundabout where the NDR meets Fakenham Road removed</p>

responses were in favour of the closure.	this closure. This change effectively relocated the position of this closure from the junction with Reepham Road to a point where the NDR crossed Fir Covert Road.
12 responses expressed concern regarding the lack of a pedestrian footbridge over the NDR linking Bullock Hill and the Petans Training facility.	These requests were a result of visitors to Petans tending to stay over night in Horsham St Faiths and then walking to the training facility via Bullock Hill. Having considered the volume of visitors to Petans and the cost of a new pedestrian footbridge, this proposal was not taken forward.
10 responses expressed concern over the volume of traffic using the B1150 North Walsham Road and the effects on its junction with Crostwick Lane/Rackheath Lane.	The applicant agreed to undertake an assessment of the junction and investigate any junction improvements as appropriate.
9 responses expressed concern regarding the new east bound merge and diverge slip roads with the A47 at the Postwick Junction, commenting that these would make the junction over complicated.	Given the constraints at the junction and having previously assessed a number of options the applicant concluded that the option proposed was the most appropriate.
There were 2 comments in favour of the removal of the Plumstead Road junction with the NDR, and 4 comments against the removal. There was concern about the increase in traffic along Plumstead Road through Thorpe End.	Having tested the removal of this junction using the traffic model it was found that vehicles would be diverted onto less suitable routes. The applicant decided to investigate alternative improvements that could be provided on Plumstead Road through Thorpe End.
6 responses expressed concern over the volume of traffic using the A1151 Wroxham Road and the effects on its	The applicant agreed to undertake an assessment of the junction and investigate any junction

junction with Green Lane West.	improvements as appropriate.

Table 3/2: Summary of Main Responses from March/April/May 2012 Consultations

3.4 Public Consultations – February/March 2013

- 3.4.1 A further series of 14 exhibitions were held in February/March 2013 at similar venues to the previous 2012 exhibitions. They were also publicised in a similar manner to the previous 2012 consultations. The purpose of these exhibitions was to provide feedback on the results of the 2012 consultations and show how the NDR proposals had changed as a result of these comments.
- 3.4.2 The exhibitions were attended by over 550 people and 291 responses to this consultation were received.
- 3.4.3 Consultees were able to comment on any aspect of the NDR but they were also asked specifically to respond to the key changes to the NDR resulting from the April/May/June 2012 consultations, namely:
- (a) the provision of a roundabout junction where the A1067 Fakenham Road meets the NDR, and the removal of the previously proposed Fir Covert Road Roundabout resulting in a closure of this road where it crossed the NDR;
 - (b) removal of the Church Street closure at its junction with the A140 Cromer Road;
 - (c) relocation of the closure on Green Lane East/Broad Lane from the Norwich to Sheringham railway line to the junction with the Plumstead Road;
 - (d) provision of an all user bridge over the NDR at Middle Road and closure of Low Road and Smee Lane where they meet the NDR.
- 3.4.4 The responses received were similar to those outlined in Section 3.3.5 with 62 responses relating to the NDR not linking to the A47 to the west of Norwich.

3.4.5 Responses tended to be split when considering the main changes made since the previous consultations, as detailed below:

Key Issue Raised	Applicant's Action in Relation to Issue
129 responses were in favour of the relocation of the Fir Covert Roundabout to Fakenham Road with 60 responses not in favour. Those not in favour generally cited the resulting closure of Fir Covert Road as a concern.	As a result of the comments received and following further investigation, the NDR proposal was further amended so that it included an additional roundabout at the NDR junction with Fir Covert Road. This was in addition to the roundabout at the NDR junction with the A1067 Fakenham Road.
63 responses were in favour of the bridge at Middle Road. 52 responses did not support this bridge.	Whilst overall there was a majority in favour of the Middle Road Bridge, responses from just Gt and Lt Plumstead parish identified 18 responses in favour of the bridge and 22 responses not in favour. Having considered the consultation response and also the parish council support for this, the applicant decided not to amend the proposal.
47 responses were in favour of removing the Church Street closure and monitoring the road after the implementation of the NDR. 57 responses were not in favour of the proposal.	Having considered the consultation results the applicant decided to retain the proposal – i.e. to not close Church Street but monitor it after implementation of the NDR with a view to providing the closure if considered appropriate.
60 responses were in favour of the relocation of the Green Lane East/Broad Lane closure to the junction with Plumstead Road. 50 responses were not in favour of the proposal.	In view of the consultation results the applicant decided not to amend the proposal and retain the closure of Green Lane East/Broad Lane at its junction with Plumstead Road.

Table 3/3: Summary of Main Responses to Design Changes shown in February/March 2013 Consultations

4 Pre-Application Consultation Strategy

4.1 Introduction

- 4.1.1 This chapter describes the requirements for pre-application consultation as set out in the Planning Act 2008, and confirms how the applicant has met these requirements. Section 4.2 of this report provides a summary of how the requirements have been met. The subsequent sections describe this in more detail. The NDR scheme is linear in nature, and Section 4.4 of this report details how this influenced the consultations undertaken.
- 4.1.2 Section 2.3 of this report provides a narrative of how the proposals for an NDR were developed. Consultations in 2003, 2004 and 2005 (outlined in Section 3.2 of this report) helped to inform decisions on the preferred route for an NDR. At its meeting on 19 September 2005, the applicant's Cabinet adopted a route for the NDR between the A47 at Postwick and the A1067 near Attlebridge (i.e. with no link between the A1067 and A47). This proposed route alignment has not significantly changed up to the statutory pre-application consultations described in this chapter.
- 4.1.3 Subsequent consultations in April/May/June 2012 and February/March 2013 (described in Sections 3.3 and 3.4 of this report) helped to refine the proposals to a point where the applicant considered the proposals sufficiently developed to commence the statutory pre-application consultations detailed in this chapter.
- 4.1.4 The applicant's strategy for consultation with the local community (under Section 47 of the Planning Act 2008) was to:
- (a) advise people of the intention to submit a DCO application for the NDR;
 - (b) provide information on the latest proposals for the NDR;
 - (c) give an opportunity to give an opinion on the overall proposals;

- (d) give an opportunity to comment on any aspect of the design of the proposals;
 - (e) use the feedback to develop the proposals.
- 4.1.5 The February/March 2013 consultations had shown a change that relocated the Fir Covert Road Roundabout to the Fakenham Road junction with the NDR. Comments had been received during this consultation for the Fir Covert Road Roundabout to be re-introduced. These comments included suggestions that, to mitigate the cost of the additional roundabout, the NDR could be single carriageway between Fir Covert Road and Fakenham Road. The applicant was interested in views on this suggestion and therefore it was included as an alternative option in the statutory pre-application consultations.
- 4.1.6 There were some parameters associated with the proposals that were fixed, although the applicant still wanted to receive opinions/comments on these and any aspects of the proposals.
- 4.1.7 For example the route of the NDR was a fixed parameter for the statutory pre-application consultations as it had been agreed by the applicant's Cabinet in September 2005 following assessment and consultation work. However, the applicant was still interested to hear views on the route.
- 4.1.8 The design of the NDR has been undertaken to comply with the Design Manual for Roads and Bridges (DMRB) with the exception of those issues outlined in the Design and Departures Report (Document Ref 10.2). Other guidance and advice notes have also been considered. When giving regard to consultation comments on the design of the NDR the applicant has had to give consideration to compliance with DMRB and other guidance and this has affected the applicant's ability to make suggested changes.
- 4.1.9 The applicant has been holding on-going meetings and discussions since 2008 with directly affected landowners and their representatives, the purpose of which has been to advise them of the developing proposals and identify issues. The consultation with directly affected landowners, under Section 42

of the Planning Act 2008, allowed an opportunity for them to see the detailed proposals and formally comment upon them. Through out consultations the discussions with landowners have continued.

4.2 Section 47 - Consultation with the Local Community

4.2.1 The following tables outline the main consultation requirements of the Planning Act 2008 with regard to the consultation with people living in the vicinity of the land for the NDR, and how the applicant has met these requirements.

Section 47(1) Requirement
The applicant must prepare a statement setting out how the applicant proposes to consult, about the proposed application, with people living in the vicinity of the land.
What the Applicant Did
A Statement of Community Consultation (SOCC) was produced for the Section 47 consultations. A supporting document to the SOCC was also developed which outlined the rationale for the proposed consultation processes detailed in the SOCC. Appendix J of this report contains a copy of the final SOCC and its supporting document.

Table 4/1: Section 47(1) Requirements and What the Applicant Did

Section 47(2)and (3) Requirement
Before preparing the statement, the applicant must consult each local authority that is within Section 43(1) about what is to be in the statement. The deadline for the receipt by the applicant of a local authority's response to the consultation is the end of the period of 28 days that begins with the day after the day on which the local authority receives the consultation documents.
What the Applicant Did
Local authorities were consulted on the draft SOCC and supporting document – the documents were delivered to them on 19 April 2013. The deadline for responses was set as 18 May 2013. The local authorities

consulted were:

- Norfolk County Council (Category "C" authority);
- Broadland District Council (Category "B" authority);
- Norwich City Council (Category "B" authority);
- Broads Authority (Category Other than "A-D");
- South Norfolk Council (Category "A" authority).

A category "B" authority is one where the application land is in the authority's area and the authority is either a unitary authority or a lower-tier district council.

A category "C" authority is one where the application land is in the authority's area and the authority is an upper-tier county council.

The Broads Authority is not a "B" or "C" authority but the NDR does fall partly within the Broads Authority's area. Accordingly, the applicant consulted the Broads Authority on its draft SOCC.

South Norfolk Council is a category "A" authority. A category "A" authority is one that shares its boundary with a category "B" authority. South Norfolk Council was invited to comment on the SOCC because previous consultations had highlighted significant comments regarding the effects of the NDR on routes between the A1067 and A47 to the west of Norwich. Part of this area is within the authority of South Norfolk Council and the SOCC proposed public exhibitions here.

Appendix I-1 of this report contains copies of the letters sent to the above named authorities enclosing the draft SOCC for comment under Sections 47(2) and (3) of the Planning Act 2008.

Table 4/2: Section 47(2) and (3) Requirements and What the Applicant Did

Section 47(5) Requirement
In preparing the statement, the applicant must have regard to any response to consultation that is received by the applicant before the deadline imposed.
What the Applicant Did
Responses were received from all local authorities, with the exception of South Norfolk Council. A summary showing the regard given to the responses is detailed in Section 4.3.4.
Appendix I-2 of this report contains copies of the responses received

from the local authorities consulted on the draft SOCC.

Table 4/3: Section 47(5) Requirements and What the Applicant Did

Section 47(6) Requirement
<p>The applicant must:</p> <ul style="list-style-type: none"> • make the SOCC available to the public in a way that is reasonably convenient for people living in the vicinity, • publish a notice in a newspaper circulating in the vicinity of the land stating where and when the SOCC can be viewed, • publish the SOCC in such other manner as may be prescribed.
What the Applicant Did
<p>Notice of the SOCC and where it could be viewed was published in the Eastern Daily Press and the Norwich Advertiser (both local newspapers) on 21 June 2013 and 28 June 2013.</p> <p>Appendix L of this report contains copies of the Section 47 Notices.</p>

Table 4/4: Section 47(6) Requirements and What the Applicant Did

Section 47(7) Requirement
<p>The applicant must carry out consultation in accordance with the proposals set out in the statement.</p>
What the Applicant Did
<p>Section 4.5 of this report details what the SOCC stated the applicant would do, and how the applicant complied with this.</p>

Table 4/5: Section 47(7) Requirements and What the Applicant Did

4.3 Section 47 - Statement of Community Consultation

- 4.3.1 In accordance with Section 47 of the Planning Act 2008, the applicant produced a Statement of Community Consultation which defined how the applicant would undertake consultation with the local community.
- 4.3.2 Consultation on the content of the SOCC with local authorities was begun on 19 April 2013 and the deadline for their response was 18 May 2013. When consulting on the draft SOCC, the applicant also provided the local authorities with a supporting document to help inform their response. The supporting

document contained background information on the NDR and the methodology behind the proposed consultation. It also contained the preliminary environmental information that was available at the time of this consultation (in accordance with advice from the Planning Inspectorate).

4.3.3 A further letter dated 7 May 2013 was sent to local authorities and is contained in Appendix I-1 of this report. This explained that whilst the SOCC clearly identified the project as including the Postwick Hub Junction, this may not have been made as clear as possible in the Scoping Report that was sent with the draft SOCC. Therefore the letter was sent to ensure that they clearly understood that the project included the Postwick Hub Junction.

4.3.4 The responses from the local authorities on the draft SOCC and how the applicant had regard to the comments made are summarised in the following tables. Full copies of the responses from local authorities are contained in Appendix I-2 of this report.

Summary of Comments from Norfolk County Council
--

<p><u>Text from response received, 9 May 2013.</u></p>
--

<p>I refer to your formal consultation, on the draft Norwich Northern Distributor Road Statement of Community Consultation (SOCC), as outlined in your letter of 19 April 2013. I can confirm that the consultation is in accordance with S47 of the Planning Act 2008, as amended.</p>

<p>In our previous discussion we suggested that consideration should be given on how to involve the 'difficult to reach groups'. Having perused the list of Identified Stakeholder and Local Interest Groups in Appendix E, I cannot see evidence of the 'difficult to reach groups' being considered, for example:</p>

- | |
|--|
| <ul style="list-style-type: none"> • Education and Youth Groups • Faith Groups • Minority Ethnic Groups • Equal Opportunity Groups |
|--|

<p>I have therefore obtained information from the Greater Norwich Development Partnership regarding the organisations they consulted when preparing the Joint Core Strategy and this information is attached to the email copy of this letter. You will also need to ensure that your list is</p>

up to date, for example Age Concern Norfolk joined Help the Aged to form Age UK Norfolk in April 2010.

The rationale of who will be consulted is understandably area based, however there are groups based outside the defined consultation area, but regularly pass through it (major retailers' national and local distribution vehicles for example). Has sufficient effort been taken to identify these groups?

Turning to the SOCC leaflet; this explains that the proposal is EIA development, and that an Environmental Impact Assessment will be carried out and where the environmental information will be available. I would suggest that there is further scope to make reference to the reasoned justification for the proposal and the positive benefits that it will bring to the local community; this could also include the mitigation measures.

To avoid confusing the public you should also be mindful of other major consultation exercises that are being undertaken in the area at the same time:

- Norfolk Mineral Site Specific Allocations Development Plan Document and Norfolk Waste Site Specific Allocations. The County Council will commence consultation on the main modifications to these documents on 15 May 2013 and the consultation period will end 26 June 2013,
- hearing on 21 May into the Joint Core Strategy for Broadland, Norwich and South Norfolk: Submission Content addressing the Judgement of Mr Justice Ouseley in *Heard v Broadland District Council*, South Norfolk District Council and Norwich City Council,
- Postwick Hub Public Inquiry which is due to start on 3 July 2013,
- consultation by Norfolk County Council on the future use of the former RAF Coltishall site.

In addition you will need to consider consultations being undertaken by other Councils on major planning applications in the area and particularly those that may be along or adjacent to the proposed route of the NDR. I therefore suggest that you contact Norwich City Council, Broadland District Council and South Norfolk District Council for such information.

Finally, it is important that the public are made aware that the SOCC is part of the pre-application process and that there will also be opportunities for the public to make their views known once the application has been accepted by the Secretary of State. The Planning Inspectorate Advice Note 8.1 provides further information on how the process works and you

<p>should make reference to this within the SOCC.</p>
<p>What the Applicant Did</p>
<p>List provided was cross referenced with the Identified Stakeholder and Local Interest Groups and the Supporting Document. This resulted in additional stakeholders being added to the list of those to be consulted.</p> <p>SOCC text was amended from 'Media – Press release will be issued</p> <p>to 'Media – Press release and relevant advertising will be issued</p> <p>This would allow the use of additional promotion and advertising of the exhibitions to be undertaken outside of the main consultation area.</p> <p>The comments regarding the provision of further justification for the NDR were noted. The applicant considered that the SOCC did already identify the key benefits of the NDR; namely:</p> <ul style="list-style-type: none"> • it will free road space for transport improvements in Norwich; • it will provide improved access from north Norfolk to the national trunk network; • it will bring traffic relief for communities to the north and east of Norwich; • it is a piece of transport infrastructure that is required to implement NATS, deliver growth and support the economy. <p>In this instance the applicant did not amend the SOCC.</p> <p>The original consultation letter of 19 April 2013 did ask the local authorities to provide information on any other consultations that they were aware of. The only consultations identified were those noted above. The applicant noted the dates of these other consultations.</p> <p>The actual date for the start of the Section 47 consultations and for the first public exhibition was moved from the 18 June 2013 (as outlined in the draft SOCC for consultation) to the 8 July 2013 to allow more time to prepare the consultation materials. This also resulted in it not conflicting with some of the consultations identified above.</p> <p>The SOCC text was amended to make reference to the Planning Inspectorate's Advice Note 8.1.</p>

Table 4/6: Norfolk County Council's Response to SOCC Consultation and What the Applicant Did

Summary of Comments from Broadland District Council

Text from response received, 20 May 2013.

(This was received after the consultation deadline of 18 May 2013 but the applicant had regard to the consultation response in preparing the final SOCC).

The draft Statement of Community Consultation prepared by Norfolk County Council, in relation to the Norwich Northern Distributor Road proposal is a relatively clear and concise document that gives a good summary of the proposals and provides useful information on who will be consulted, what they will be consulted on, how they will be consulted, and what will happen following the exercise. The process outlined in the SOCC generally follows the key principles of effective community involvement that are outlined in Broadland District Council's Community Involvement Protocol for Significant Development, these being:

Adopt an inclusive approach to community and stakeholder involvement ensuring that anyone who has interest is given the opportunity to contribute ideas from an early stage.

The combination of different forms of engagement and publicity outlined in the SOCC e.g. via exhibitions, meetings, documents at libraries, websites, posters, media etc will enable a wide variety of interested individuals to take part in the consultation.

Demonstrate, by reporting back on results of community and stakeholder involvement, that all views are listened to and considered.

The SOCC includes a statement on consultation feedback (which Broadland District Council has previously recommended), stating that a consultation report will be published alongside the planning application, setting out the account that has been taken of the relevant responses received. This is in keeping with the above principle. The Council recommends that this report is made available to those that have taken part in prior consultations.

Provide sufficient time for stakeholders and communities to contribute their views on proposals.

The consultation period lasts for 10 weeks, which should provide ample

time for individuals and stakeholder groups to formulate their responses.

Provide accessible, clear and relevant information relating to proposals and community involvement opportunities.

The SOCC is generally a very clear and concise document that should allow any reader to understand how they can get involved in the consultation and make a response.

However, there are one or two terms in the 'Summary of Proposals' which could perhaps be clearer. In particular, the reference in this section to 'at grade junctions', 'radial routes' and 'grade separated interchanges' may serve to confuse members of the public. In addition, technical terms such as 'earthwork bunds' and 'Bus Rapid Transit' may need explaining.

Subject to the amendments referred to above, Broadland District Council considers the draft SOCC as being a document that is fit for purpose.

What the Applicant Did

Text in SOCC was amended to explain terms such as 'radial routes', 'grade separated junctions', 'earthwork bunds' and 'Bus Rapid Transit'.

Table 4/7: Broadland District Council's Response to SOCC Consultation and What the Applicant Did

Summary of Comments from Norwich City

Text from response received, 17 May 2013.

I refer to your letters of 19 April 2013 and 07 May 2013 in relation to the above. The consultation area boundary now proposed is considered to be reasonable and now includes those areas of Norwich which are likely to be most affected by the proposals.

The content of the consultation also appears reasonable and I assume the proposed leaflet will be equality tested. Other than this I have no further comments to add at this stage on behalf of the City Council.

What the Applicant Did

The applicant wrote to residents/businesses, the letter was compliant with the applicant's equality guidelines.

Table 4/8: Norwich City Council's Response to SOCC Consultation and What the Applicant Did

Summary of Comments from Broads Authority

Text from response received, 25 April 2013

Many thanks for consulting the Broads Authority on the SOCC for the NDR. The approach seems a logical one and the timings of the consultation as a whole as well as the exhibitions give the community ample opportunity to get involved.

I would suggest considering adding the consultation to the Norwich City Council and Norfolk County Council newsletters, if the timing allows it. This could give more coverage. Unfortunately, there is no Broads Authority publication set for that time period, but if you provide us with relevant information we can add it to our website. Please let me know if you wish for us to do that.

I note in the SOCC there is nothing that refers to the format of response accepted or the questions that are intended to be asked.

To conclude, if this SOCC is followed (notwithstanding the comments above), the community will have ample opportunity to have their say.

What the Applicant Did

Text for Norfolk County Council’s “Your Norfolk” magazine June edition had already been arranged at the time of the SOCC consultation with local authorities. On 14 May 2013 the editors of known parish magazines/newsletters in the consultation area were e-mailed text advising of the proposed exhibitions together with a request that they place this text in their next publication.

With regard to the Broads Authority comment that the SOCC did not contain any reference to the format of providing comments - the draft SOCC did include this. Under the section entitled “How to find out More and Provide Comments” the draft SOCC outlined how to provide comments by e-mail, letter, telephone and on-line survey form. As a result no amendments were proposed to the SOCC as a result of this comment.

Table 4/9: Broads Authority Response to SOCC Consultation and What the Applicant Did

4.3.5 Notice of the SOCC and where it could be viewed was published in The Eastern Daily Press and the Norwich Advertiser (both local newspapers) on

21 June 2013 and 28 June 2013. Between 24 June 2013 and 20 September the SOCC was available to view at the following locations:

- Norfolk County Council's main office at County Hall, Martineau Lane, Norwich, NR1 2DH;
- Broadland District Council's main office at Thorpe Lodge, 1 Yarmouth Road, Norwich, NR7 0DU;
- South Norfolk District Council's main office at South Norfolk House, Swan Lane, Long Stratton, NR15 2XE;
- Norwich City Council's main office at City Hall, St Peters Street, Norwich, NR2 1NH;
- Broads Authority main office at Yare House, 62-64 Thorpe Road, Norwich, NR1 1RY;
- Norwich Millennium Library, The Forum, Millennium Plain, Norwich, NR2 1AW;
- Norwich Plumstead Road Library, Plumstead Road, Norwich, NR1 4JS;

4.3.6 Copies of the SOCC publication notices are contained in Appendix L of this report.

4.4 Section 47 - Rationale for the SOCC

4.4.1 The NDR scheme is linear in nature and this needed to be taken into consideration when determining the form of consultation with the local community.

4.4.2 The use of exhibitions was considered a good means of consulting because they allowed the opportunity to consult a larger number of residents and

stakeholders, without posting large paper documents to each consultee.

Unlike meetings, consultees could visit exhibitions at a day and time convenient for themselves. As the exhibitions would be staffed, they would also allow the opportunity to have face-to-face discussions and questioning.

4.4.3 At the time of developing the SOCC it was considered that those areas and roads most affected by the proposals would be:

- (a) parishes through which the NDR passed;
- (b) sections of main the radial routes close to the NDR, as traffic may be drawn to these sections in order to use the NDR;
- (c) existing roads around the north of Norwich;
- (d) the Norwich Outer Ring Road as the NDR would represent an alternative to this;
- (e) routes between the A1067 and A47 in the Taverham/Drayton and Costessey/Easton area.

4.4.4 As a result, the consultation area identified within the SOCC was defined on the following basis:

- (a) it included all parishes through which the NDR passes (including the proposed off line improvements);
- (b) its northern and eastern boundary was defined so that it includes the parishes that are adjacent to those through which the NDR passed;
- (c) the western boundary was defined so that it included the 3 parishes where concerns had been raised regarding the effects of the NDR on existing routes between the A1067 at Taverham/Drayton and the A47 at Easton/Costessey (i.e. Costessey, Easton and Ringland);

- (d) its southern boundary was defined by a line being a 200m offset south of the A1074 Dereham Road, A140/A1042 Outer Ring Road and A1042 Yarmouth Road.
- 4.4.5 This area was where the main letter drop to individual residents and business addresses, informing them of the proposed exhibitions was undertaken. A copy of the letter and information sent is contained in Appendix K-2 of this report.
- 4.4.6 The applicant could have extended the consultation area further so that it covered the whole of Norwich, the whole of the Broadland and North Norfolk District Councils and even the whole of Norfolk (as has been suggested in some of the consultation responses). In particular the areas further north of Norwich are areas likely to benefit from the improved accessibility provided by the NDR. Similarly, Norwich residents are those likely to benefit from the NATS proposals.
- 4.4.7 However, this was not a consultation on NATS, it was a consultation on the NDR proposals and the applicant wanted to keep the consultation manageable, cost effective and to engage those persons most affected by the proposals.
- 4.4.8 Further publicity and promotion of the consultation and exhibitions, was undertaken both within in the consultation area defined by the SOCC and areas beyond this. This supplementary promotion and advertising is detailed in Section 4.7.
- 4.4.9 The rationale for selecting the exhibition venues was as follows:
- (a) an exhibition venue was proposed in the majority of parishes through which the mainline of the NDR passes, the exceptions to this being Attlebridge and Beeston St Andrew. No exhibitions were proposed in Attlebridge and Beeston St Andrew as they are much smaller communities having less than 100 property addresses. However,

residents of any parish were able to attend any of the proposed exhibitions;

- (b) an exhibition was proposed in each parish located between the NDR and the boundary of Norwich City Council;
- (c) previous consultations had highlighted concerns regarding the effects of the NDR on existing routes between the A1067 at Taverham/Drayton and the A47 at Easton/Costessey. As a result exhibitions were proposed within the parishes of Easton and Costessey;
- (d) two exhibitions were proposed within Norwich. These were located at The Forum in the centre of the city and at the Norman Centre in the north of the city.

4.4.10 Village halls and community centres were used for the exhibitions as they were usually centrally located within a community and generally had the most suitable access for those walking, cycling and travelling by public transport or motor vehicle.

4.5 Section 47 - Compliance with the SOCC

4.5.1 The table below summarises what the SOCC stated regarding **how** the applicant would consult and what it did to achieve this.

What the SOCC Stated on How the Applicant Would Consult
The applicant would arrange and attend public exhibitions at the dates and venues detailed in the SOCC.
What the Applicant Did
The public exhibitions were arranged as detailed by the SOCC. The format of the exhibitions is outlined further in Section 4.8 of this report.

Table 4/10: SOCC Statement on Public Exhibitions and What the Applicant Did

What the SOCC Stated on How the Applicant Would Consult
The applicant would provide on its website the latest information on the

scheme including that displayed at the exhibitions.

What the Applicant Did

Electronic copies of the exhibition boards were posted on the applicant's website on 8 July 2013. The scheme information document was placed on deposit at the local authority offices and public libraries detailed in the SOCC on 8 July 2013. They were maintained there until 20 September 2013. Copies of the exhibition boards are contained in Appendix R-1 to R-4 of this report.

Table 4/11: SOCC Statement on Displaying Public Exhibition Information and What the Applicant Did

What the SOCC Stated on How the Applicant Would Consult

The applicant's website would also provide opportunity for comments to be submitted.

What the Applicant Did

An on-line survey form was available for responses to be provided electronically from 8 July 2013 until 20 September 2013.

Table 4/12: SOCC Statement on Providing Comments via Website and What the Applicant Did

What the SOCC Stated on How the Applicant Would Consult

Press releases and relevant advertising would be issued to include details of the consultation process and the public exhibitions.

What the Applicant Did

Other relevant advertising of the consultation was undertaken. Details of this are provided in Section 4.7.

Table 4/13: SOCC Statement on Relevant Advertising and What the Applicant Did

What the SOCC Stated on How the Applicant Would Consult

The SOCC would be made available for inspection, and the locations it can be viewed would be published in a local newspaper.

What the Applicant Did

Copies of the SOCC and its supporting document were placed on deposit

at the local authority offices and public libraries detailed in the SOCC on 24 June 2013. They were maintained there until 20 September 2013.

Table 4/14: SOCC Statement on Advertising SOCC and What the Applicant Did

What the SOCC Stated on How the Applicant Would Consult
The applicant would endeavour to continue holding meetings when requested before, during and after the consultation period.
What the Applicant Did
Section 4.10 of this report details the meetings that were held.

Table 4/15: SOCC Statement on Meetings and What the Applicant Did

What the SOCC Stated on How the Applicant Would Consult
Briefing meetings would be provided for local politicians (district/county/city councillors and MPs).
What the Applicant Did
District/county/city councillors were invited to a drop-in briefing session at County Hall between 3pm and 8pm on 3 July 2013. One city councillor attended this session.

Table 4/16: SOCC Statement on Briefing Local Politicians and What the Applicant Did

What the SOCC Stated on How the Applicant Would Consult
For those unable to attend an exhibition between 8 July and 20 September 2013, a project information document containing details of the proposals will be available at the venues detailed in the SOCC.
What the Applicant Did
The scheme information document was placed on deposit at the local authority offices and public libraries detailed in the SOCC on 8 July 2013. They were maintained there until 20 September 2013.

Table 4/17: SOCC Statement on Providing Information Other than Exhibitions and What the Applicant Did

4.5.2 The table below summarises what the SOCC stated regarding **who** the applicant would consult and what it did to achieve this.

What the SOCC Stated on Who the Applicant Would Consult
The applicant would send details of the exhibitions and consultation document locations to residential/business addresses within the consultation area using its latest available address information.
What the Applicant Did
Letters detailing the proposed exhibitions and deposit locations for the scheme information documents (including a short description of the scheme) were sent to 57,000 property/business addresses within the consultation area defined by the SOCC during the week beginning 1 July 2013. A copy of this letter is contained in Appendix K-2 of this report.

Table 4/18: SOCC Statement on Advising Residents of Exhibitions and What the Applicant Did

What the SOCC Stated on Who the Applicant Would Consult
The applicant would send details of the exhibitions and consultation document locations to county/city/district councillors and MPs/MEPs whose constituencies are either wholly or partly within the consultation area.
What the Applicant Did
Details of these were e-mailed to county/city/district councillors on 28 June 2013. Letters to MPs/MEPs were sent on 26 June 2013. Copies of these letters are contained in Appendix K-1 and K-4 of this report.

Table 4/19: SOCC Statement on Advising Local Politicians of the Public Exhibitions and What the Applicant Did

What the SOCC Stated on Who the Applicant Would Consult
The applicant would send details of the exhibitions and consultation document locations to parish councils within the consultation area.
What the Applicant Did
Letters to parish councils, advising of these details, were sent on 24 June 2013. A copy of this letter is contained in Appendix K-3 of this report.

Table 4/20: SOCC Statement on Advising Parish Councils of the Public Exhibitions and What the Applicant Did

What the SOCC Stated on Who the Applicant Would Consult
The applicant would send details of the exhibitions and consultation document locations to stakeholder and local interest groups.
What the Applicant Did
Letters to the stakeholders listed in the supporting document to the SOCC were issued during the week beginning 1 July 2013. A copy of this letter is contained in Appendix K-2 of this report.

Table 4/21: SOCC Statement on Advising Stakeholders and Local Interest Groups of the Public Exhibitions and What the Applicant Did

What the SOCC Stated on Who the Applicant Would Consult
The applicant would erect posters and advertising banners detailing the exhibitions in public libraries and other key venues within the consultation area and within Norwich City.
What the Applicant Did
The erection of posters and banners was undertaken as detailed in Section 4.7.

Table 4/22: SOCC Statement on Other Advertising of the Public Exhibitions and What the Applicant Did

What the SOCC Stated on Who the Applicant Would Consult
The applicant would ask parish councils within the consultation area to advertise the exhibitions in their newsletters and on their notice boards.
What the Applicant Did
On 14 May 2013 the editors of known parish magazines/newsletters in the consultation area were e-mailed text advising of the proposed exhibitions with a request that they place this text in their next publication. A copy of this e-mail is contained in Appendix K-3 of this report.

Table 4/23: SOCC Statement on Using Parish Councils to Advertise the Public Exhibitions and What the Applicant Did

4.5.3 The table below summarises what the SOCC stated the applicant would do regarding consultations on the Preliminary Environmental Information Report (PEIR) and what the applicant did to achieve this.

What the SOCC Stated the Applicant Would do Regarding Consultations on the PEIR
Preliminary environmental information would be available to view on the applicant's website and in hard copy at the library locations listed in the SOCC.
What the Applicant Did
<p>The PEIR was placed on the applicant's website on 13 July 2013. It was also deposited in the locations listed in the SOCC on 16 July 2013.</p> <p>It was originally intended that copies would remain in the deposit locations until 20 September. However, because a deadline extension to 18 October 2013 was provided to certain Section 42 consultees, the documents remained in these locations until this date.</p>

Table 4/24: SOCC Statement on Where the PEIR Would be Available and What the Applicant Did

What the SOCC Stated the Applicant Would do Regarding Consultations on the PEIR
Release of the preliminary environmental information would coincide with the start of consultation under Section 42 and Section 48 of the Planning Act 2008 as set out in this SOCC.
What the Applicant Did
The PEIR formed part of the Section 42 consultation packages. Section 48 Notices were placed in two local newspapers (the Eastern Daily Press and the Norwich Advertiser), the Times and the London Gazette on 12 and 19 July 2013. On the same days, a separate notice was placed in the Eastern Daily Press and the Norwich Advertiser advising where the PEIR was available to view. Copies of these notices are contained in Appendix M and Appendix O of this report.

Table 4/25: SOCC Statement on When the PEIR Would be Available and What the Applicant Did

What the SOCC Stated the Applicant Would do Regarding Consultations on the PEIR
Release of the preliminary environmental information may be after some of the public exhibitions referred to below. Its release will be advertised in

local newspapers and on the applicant’s website.
What the Applicant Did
A draft copy of the PEIR was available for the first exhibition on 8 July 2013. Notices advising of the final PEIR's release and where it could be viewed were placed in two local newspapers (the Eastern Daily Press and the Norwich Advertiser) on 12 and 19 July 2013. Copies of these notices are contained in Appendix O of this report.

Table 4/26: SOCC Statement on Advertising PEIR Availability and What the Applicant Did

4.6 Section 47 - Inconsistencies with the SOCC

4.6.1 The following tables list the inconsistencies from the SOCC.

What the SOCC Stated on Who the Applicant Would Consult
The applicant would send details of the exhibitions and consultation document locations to residential/business addresses within the consultation area using its latest available address information.
Inconsistency
<p>The consultation letters were sent to over 57,000 resident/business addresses, including a number of parishes that were not specifically hosting an exhibition. The letters invited them to attend any of the events listed. Comments received at the start of the exhibition highlighted that some residents had received letters on the day of or just after the first exhibition in Rackheath. Comments mainly came from residents of Rackheath who had missed the exhibition in their village.</p> <p>Whilst Rackheath residents were able to attend any of the other exhibitions, in light of the comments received the applicant decided to schedule an additional exhibition on 12 August 2013 (between 13:00 to 20:00) at the Holy Trinity Church in Rackheath. Letters notifying people of this new exhibition were sent to addresses within Rackheath Parish (see Appendix K-5 of this report).</p>

Table 4/27: Derivation from SOCC – Additional Rackheath Exhibition

What the SOCC Stated on How the Applicant Would Consult
Briefing meetings would be provided for local politicians

(district/county/city councillors and MPs/MEPs).
Inconsistency
Whilst district/county/city councillors were invited to a drop-in briefing session at County Hall between 3pm and 8pm on 3 July 2013, the invitation to this session for MPs/ MEPs was omitted. However, on 9 August 2013 the applicant wrote to MPs/MEPs offering to meet them individually should they wish to do so. One MP accepted this offer.

Table 4/28: Derivation from SOCC – MPs/MEPs Briefing Meeting

4.7 Section 47 - Other Promotion and Advertising of the Public Exhibitions

4.7.1 The SOCC stated that ‘press releases and relevant advertising would be issued to include details of the consultation process and the public exhibitions.’ The table below outlines the additional promotion/advertising of the consultations that was undertaken.

Activity	When
10 second advertisement slots on a local radio station (Heart FM).	6 slots per day between Monday 8 July 2013 and Friday 12 July 2013.
Advertisement poster on plasma screens in library screens within Norfolk.	Between Friday 28 June 2013 and Friday 9 August 2013.
A4 paper copy of poster placed in 11 libraries within the consultation area.	Between Monday 1 July 2013 and Friday 9 August 2013.
Advertisement poster on plasma screens at bus stops and park and ride sites.	Between Friday 28 June 2013 and Friday 9 August 2013.
Single ¼ page advert in the Eastern Daily Press (local newspaper).	Saturday 6 July 2013.
3 No front page strip ads in the Norwich Advertiser (local	Friday 5, 12 and 19 July 2013.

newspaper).	
Advertisement poster on plasma screens in The Forum in Norwich.	Between Friday 28 June 2013 and Friday 9 August 2013.
Advert in the June 2013 edition of "Norfolk Matters" Magazine and e-bulletin that is issued to all parish councils in Norfolk.	Between Friday 5 July 2013 and Friday 9 August.
3 advertisement banners erected in the receptions of Norfolk County Council, Norwich City Council and Broadland District Council.	Between Friday 5 July 2013 and Friday 9 August.

Table 4/29: Summary of Supplementary Promotion/Advertising

4.7.2 Examples of the additional publicity produced are contained in Appendix P of this report.

4.8 Section 47 - Public Exhibitions

4.8.1 In accordance with the SOCC, public exhibitions were provided as detailed below:

Public Exhibitions Outlined in the SOCC	
Date	Venue
Mon 8 July 1pm to 8pm	Rackheath Holy Trinity Church, Salhouse Road, Rackheath, NR13 6PD.
Fri 12 July 1pm to 8pm	The Dussindale Community Centre, Pound Lane, Thorpe St Andrew, Norwich, NR7 0SR.
Sat 13 July 1pm to 8pm	Old Catton Village Hall, Church Street, Hall Drive, Old Catton, NR6 7DW.
Mon 15 July 1pm to 8pm	Postwick Village Hall, Ferry Lane, Postwick, NR13 5HL.
Tue 16 July 1pm to 8pm	Spixworth Village Hall, Crostwick Lane, Spixworth, NR10 3NQ.
Thu 18 July 1pm to 8pm	Easton Village Hall, Marlingford Road, Easton, NR9 5AD.
Sat 20 July 1pm to 8pm	Drayton Village Hall, Pond Lane, Drayton, NR8 6PP.

Mon 22 July 1pm to 8pm	Hellesdon Community Centre, Middletons Lane, Norwich NR6 5SR.
Wed 24 July 1pm to 8pm	Sprowston Diamond Centre, School Lane, Sprowston, NR7 8TR.
Thu 25 July 1pm to 8pm	Horsford Village Hall, Holt Road, Horsford, NR10 3DN.
Sat 27 July 1pm to 8pm	Breckland Hall, Breckland Road, New Costessey NR5 0RW.
Tue 30 July 1pm to 8pm	St Faiths Centre, Manor Road, Horsham, Norwich, NR10 3LF.
Fri 2 August 1pm to 8pm	Taverham Village Hall, Sandy Lane, Norwich, NR8 6JR.
Sat 3 August 1pm to 8pm	Gt Plumstead Village Hall, Church Road, Gt Plumstead, NR13 5AB.
Tue 6 August 9am to 4pm	The Forum, Millennium Plain, Norwich, NR2 1TF.
Fri 9 August 1pm to 8pm	Norman Centre, Bignold Road, Norwich, NR3 2QZ.
Additional Public Exhibition not Outlined in the SOCC	
Date	Venue
Mon 12 August 1pm to 8pm	Rackheath Holy Trinity Church Hall, Salhouse Road, Rackheath, NR13 6PD.

Table 4/30: Public Exhibition Dates and Venues

4.9 Section 48 - Statutory Publicity

4.9.1 The following sections outline the main consultation requirements of the Planning Act 2008 with regard to the statutory publicity, and how the applicant has met these requirements.

Section 48 Requirement
The applicant must publicise the proposed application in the prescribed manner. Publicity should include a deadline for receipt of responses, as well as the matters set out in Regulation 4(3) of the Infrastructure Planning (Applications: Prescribed Forms and Procedures) Regulations 2009.
What the Applicant Did
Notices publicising the proposed DCO application were placed (on 12 and 19 July 2013) in the following publications: <ul style="list-style-type: none"> • Eastern Daily Press (local newspaper),

- Norwich Advertiser (local newspaper),
- The Times (national newspaper),
- London Gazette.

The notices complied with the requirements of Section 48 and Regulation 4(3), and confirmed that responses should be received by 20 September 2013. Appendix M of this report contains copies of the Section 48 Notices.

Table 4/31: Section 48 Requirements and What the Applicant Did

- 4.9.2 The local authorities and prescribed consultees were notified of the commencement of this consultation via correspondence dated 11 July 2013 (see Appendix Q of this report). This correspondence included a copy of the Section 48 Notice as it would appear in the newspapers for the first time the following day. Where available, copies of the notices as displayed on the newspapers' websites have also been included in Appendix M of this report.
- 4.9.3 At the time of the Section 48 consultation the applicant's records showed that there was no clerk for Crostwick Parish Meeting and an oversight meant that it was not included in the notification. However, at the commencement of the Section 42 consultations the parish chairman had been identified and included in the subsequent formal Section 42 consultations
- 4.9.4 The Section 48 Notice identified the consultation material used in the consultation, being documents, plans and maps showing the nature and location of the NDR, including the Preliminary Environmental Information Report.
- 4.9.5 The notice also identified the times and locations where the materials could be inspected and these are detailed below.

Library Details	Mon	Tue	Wed	Thu	Fri	Sat	Sun

Table 4/32: Consultation Document Deposit Location

4.10 Non-Statutory Consultations

4.10.1 The SOCC stated that the applicant would endeavour to continue holding meetings when requested before, during and after the consultation period. During the period from commencement of consultations on 8 July to 18 November (the last deadline for responses to the design change consultations outlined in Section 7.0 of this report) the following meetings were attended by the applicant's representatives (all meetings that were requested were attended):

Date	Consultee	Venue	Issues Discussed
5 August 2013	Taverham Parish Councils Traffic and Transportation Sub Committee	Taverham Village Hall	Volume of vehicles using routes between the A1067 at Taverham and the A47
21 August 2013 4 October 2013 7 November 2013	Resident representatives of Hall Lane, Drayton	Site meeting Drayton Hall Lane, Drayton	Proposal to close Drayton Lane south and resulting effects on Reepham Road and Hall Lane
24 Sept 2013	Chloe Smith MP	Norfolk County Council's main offices, Norwich	General update from the applicant on progress of the project
24 Sept 2013	Resident representatives of, Middle Road, Gt Plumstead	On site Middle Road Gt Plumstead	Proposal to provide Middle Road Bridge, the resulting effects on Middle Road and the current standard of Middle Road
25 Sept 2013	District Councillor, County Councillor and representative for Horstead Parish Council	Norfolk County Council's main offices, Norwich	Effects of NDR on B1150 through Horstead
30 Sept 2013	Horsham and St Faiths St Faiths Parish Council	St Faiths Centre, Manor Road	Impact of smoke from airfield on NDR and proposal not to provide bridge/underpass

			between Bullock Hill and Petans training facility
15 November 2013	Resident of Green Lane West, Rackheath	On site at Green Lane West junction with Wroxham Road	Effects of proposals on nearby property regarding noise, emissions and visual intrusion

Table 4/33: Additional Meetings Dates and Venues

4.10.2 The meetings were arranged to allow informal discussion on the proposals.

For each meeting the applicant encouraged the consultee(s) to submit a consultation response so that the points raised could be formally logged.

4.10.3 The applicant was also invited to give a presentation on the project at a number of business events during the consultation, which gave an opportunity to raise questions.

4.11 EIA Regulations Consultations

4.11.1 The NDR is a scheme that requires an Environmental Impact Assessment (EIA). The results of the EIA have been reported in an Environmental Statement that forms part of the application documents. A notification under Regulation 6 of the Infrastructure Planning (Environmental Impact Assessment) Regulations 2009 was issued to the Secretary of State (sent to the Planning Inspectorate) on 23 January 2013 confirming that the applicant would provide an environmental statement in respect of the NDR Scheme. The notification was provided prior to the consultation under section 42 commencing, as is required by Regulation 6(1). A copy of the notification is provided as Appendix Y to this report.

4.11.2 A Preliminary Environmental Information Report (PEIR) was produced as part of the pre-application consultations. This gave a preliminary understanding of the potential environmental effects of the scheme and of the measures proposed to reduce these effects.

4.11.3 The PIER formed part of the scheme information sent to Section 42 consultees. As described in the SOCC, the PEIR was also available to view at the following locations:

- (a) the applicant’s website;
- (b) at the public exhibitions outlined in the SOCC;
- (c) at the main local authority receptions and public libraries outlined in the SOCC.

4.11.4 Notices advertising the release of the PEIR and how it could be viewed were placed in the Eastern Daily Press and Norwich Advertiser (both local newspapers) on 12 and 19 July 2013. Copies of these notices are contained in Appendix O of this report.

4.12 Section 42 - Consultation with Local Authorities, Prescribed Consultees and Those with Interest in Land

4.12.1 The following sections outline the main consultation requirements of the Planning Act 2008 with regard to the consultation with local authorities and prescribed consultees and those with in interest in land, and how the applicant has met these requirements.

Section 42 Requirement
<p>The applicant must consult the following about the proposed DCO application:</p> <ul style="list-style-type: none"> • such persons as may be prescribed; • the Marine Management Organisation if certain marine areas may be affected (not relevant in this case); • each local authority that is within Section 43; • the Greater London Authority if the land is in Greater London (not relevant in this case); • each person who is within one or more of the categories set out in Section 44.
What the Applicant Did - prescribed consultees and local authorities
<p>Prescribed consultees and local authorities were sent, by Royal Mail</p>

Recorded Delivery, a consultation package consisting of:

- a covering letter;
- the scheme information document;
- the Preliminary Environmental Information Report (PEIR);
- the Non Technical Summary of the PEIR;
- the Non Technical Note on Transport Modelling;
- a CD containing electronic copies of all the above documents plus the appendices to the scheme information document (which included scheme drawings and provisional modelled traffic flow predictions).

A copy of the letter sent to prescribed consultees and local authorities is contained in Appendix F-1 of this report. Appendix F-2 of this report contains a schedule of the local authorities and prescribed consultees that were consulted, including the dates they received the documents and the deadline stated for a response.

Section 2.6 describes how a local authority was identified for the purposes of Section 43 of the Planning Act 2008.

What the Applicant Did – those with interest in land

Those with an interest in land (as defined under Section 44 of the Planning Act 2008) were sent a consultation package consisting of:

- a covering letter;
- the scheme information document;
- the Non Technical Summary of the PEIR;
- the Non Technical Note on Transport Modelling;
- a CD containing electronic copies of all the above documents plus the appendices to the scheme information document (which included scheme drawings and provisional modelled traffic flow predictions) and the Preliminary Environmental Information Report (PEIR).

Consultation packages to addresses in the local area (i.e. parishes through which the NDR passes or adjacent to the NDR) were generally hand delivered through property letter boxes between 10 August and 14 August 2013. The other addresses were sent by courier on 12 August 2013.

As additional information came to light regarding land ownership and interests, further consultation packages were issued and these new consultees were advised of an extended deadline to the consultation in

order that they were allowed the minimum 28 day period to respond.

A copy of the letter sent to those consultees with an interest in land is contained in Appendix H-1 of this report. Appendix H-2 of this report contains a full schedule of those consulted, when they received the documents and the stated deadline for a response.

Table 4/34: Section 42 Requirements and What the Applicant Did

Section 45 Requirement

The applicant must, when consulting a person under Section 42 of the Planning Act 2008, notify the person of the deadline for the receipt by the applicant of the person's response to the consultation. The deadline for receipt of responses must not be earlier than the end of the period of 28 days that begins with the day after the day on which the person receives the consultation documents.

What the Applicant Did

The deadline for receipt of responses was set as 20 September 2013. This was detailed in the covering letter set to all consultees, and was more than 28 days after the day of receipt in all cases.

As additional information came to light regarding land ownership and interests, further consultation packages were issued and these new consultees were advised of an extended deadline to the consultation in order that they were allowed the minimum 28 day period to respond. Appendix H-2 of this report contains a full schedule of those consulted, when they received the documents and the stated deadline for a response.

Table 4/35: Section 45 Requirements and What the Applicant Did

Section 46 Requirement

The applicant must supply the Secretary of State with such information in relation to the proposed application as the applicant would supply to comply with Section 42 of the Planning Act 2008. This must be done before commencing the consultation under Section 42.

What the Applicant Did

The applicant's letter dated 26 July 2013, notified PINS (on behalf of the Secretary of State) of its intention to submit a DCO for the scheme and included copies of the Section 42 consultation documents. This is

contained in Appendix N of this report. The letter was sent prior to the commencement of the Section 42 consultation and the applicant can confirm that the documents issued with this letter were the same as those issued to the Section 42 consultees.

Table 4/36: Section 46 Requirements and What the Applicant Did

4.13 Section 42 - Additional Consultees/Extended Consultation Deadlines

4.13.1 During the process of undertaking the Section 42 consultations, there was occasionally a need to re-send the consultation packages. The reasons for this included:

- (a) a change in parish clerk, requiring new consultation documents being sent to the new clerk;
- (b) no delivery confirmation being received and resending new consultation documents to the consultee again;
- (c) requests from consultees to include other organisations/bodies to be included in the consultation;
- (d) new information regarding land interests becoming available.

4.13.2 Where documents had to be resent, the consultees were given an extended deadline to ensure that they had the minimum statutory period of 28 days to provide a response. They were advised of the new deadline for responses on the documents they received.

4.13.3 The list of consultees in Appendix F-2 and H-2 of this report details the deadline given to the consultees and details the reasons for needing to resend the consultation documents.

4.14 Section 42 - On-Going Diligent Inquiry

4.14.1 Throughout the pre-application process, the applicant has continually carried out diligent inquiry to identify those within the three categories defined in Section 44 of the Planning Act 2008 (effectively owners, tenants, occupiers,

other persons with interests in land, and persons whose land might be injuriously affected). That included research through the Land Registry, information requests issued to relevant addresses, appropriate use of the applicant's prior knowledge of owners and occupiers (including the most appropriate address to which letters should be issued, which could be different to addresses identified at the Land Registry), use of publicly available information lists (such as directories), and consideration of the potential effects of the Scheme (in particular having regard to persons potentially within 'Category 3' as defined in section 44(4) of the Planning Act 2008).

- 4.14.2 The applicant used the results of that diligent inquiry in order to carry out the pre-application consultations pursuant to Section 42 of the Planning Act 2008 that are described in this report.
- 4.14.3 Where land was in unknown ownership at the time of the consultation, the applicant used consultation letters addressed to "The owner/occupier" or site notices (as appropriate considering the land in question), in order to seek to ensure that the relevant persons would be provided with notice of the proposed application.
- 4.14.4 As a separate exercise to the consultations undertaken under Section 42 of the Planning Act 2008 the applicant has been carrying out land referencing for the compilation of the Book of Reference. In a limited number of cases this exercise has produced some discrepancies with the information used to identify the Section 42 consultees. These discrepancies are identified in Appendix Z of this report together with the applicant's comments. Having regard to those comments the applicant remains satisfied that after making diligent inquiries it has notified all those persons with a relevant interest known to it. In addition, the applicant is satisfied that the discrepancies are minor and that no person who should have been consulted under Section 42 has been deprived of the opportunity to make representations.

4.14.5 If the applicant's continuing diligent inquiry reveals that land has been sold in between the pre-application consultations, submission of the application and the issue of the notification pursuant to Section 56 of the Planning Act 2008, then it will issue the latter notification to the 'new' owner. In addition, if the continuing diligent inquiry results in an 'additional' person being noted as relevant (such as a spouse who is not recorded on a registered title), then they will also be included in the Section 56 notification process. Measures such as these will ensure that, to the extent that the new owner is not aware of the scheme from the extensive local consultation and publicity generally, that they will be aware of the application and will have an opportunity to make representations to the Secretary of State.

4.15 Traffic Modelling Presented for Consultation

4.15.1 To help inform responses the consultation information included modelled traffic flow information for the 2012 base year and for the years 2017 and 2032, for situations with and without the NDR. In addition to the information being available on the internet, it was also available as follows:

- (a) for the Section 47 consultations this information was presented on the displays at the public exhibitions;
- (b) for the Section 48 consultations this information was contained in the documents deposited at the locations detailed in the Section 48 Notice;
- (c) for the Section 42 consultations this information was contained in the information documents sent to consultees.

4.15.2 The modelled traffic flows presented were based upon the NATS transport model that was originally developed in 2002 and which has been updated a number of times since then. In 2013 the model was refined using fresh data collected in 2012 and this latter model was used to develop the traffic forecasts presented at consultation. However, at the time of the consultation the refinement process was still underway and hence the flows presented at

consultation were preliminary data based upon a partially calibrated and validated model.

- 4.15.3 Since consultation the calibration/validation has been completed and the model has been refined further. The refinements have included minor changes to the NDR scheme design, and updates to the model to take on board new information in relation to the internalisation of trips within developments, new developer links and travel plans associated with developments. The data now presented therefore takes on board all of the aforementioned changes.
- 4.15.4 Notwithstanding this, analysis has been undertaken to understand the impact of the changes made and this has concluded that the majority of flow differences between the consultation data and the data now presented is slight. In no case was a material traffic impact identified in the final modelling in a location where the preliminary data had suggested that there would be no traffic impacts arising from the NDR. In addition the analysis indicates that, whilst absolute flows have changed, the forecast impact and trends associated with the provision of the NDR remain similar.
- 4.15.5 The adoption of the JCS was subject to a legal challenge in May 2011, which resulted in part of the JCS being remitted to the pre-submission stage (i.e. this part should be consulted upon again before examination by an independent inspector). The remitted part of the JCS had not yet been adopted at the time of the statutory pre-application consultations on the NDR.
- 4.15.6 The applicant therefore presented traffic data for two scenarios detailed below:
- (a) traffic modelling data with JCS growth allocation – which showed forecast traffic flows assuming the level of development detailed in the JCS and allocated in the locations identified by the JCS;

- (b) traffic modelling data with dispersed growth – which showed forecast traffic flows assuming the level of development detailed in the JCS but dispersed equally across the highway network.

4.15.7 Since consultation, the remitted JCS has been found sound and is in the process of being adopted. Accordingly, the more realistic scenario is the traffic modelling data with JCS growth allocated. It is this scenario that is therefore carried forward in all of the assessment material presented in the DCO application. However, because data for both scenarios were provided the applicant considers that a robust consultation was carried out that presented the potential scenarios as they stood at the time consultation was carried out.

5 Section 47 and Section 48 Consultation Responses

5.1 Section 47 and 48 Consultations - Introduction

- 5.1.1 This chapter explains the applicant's analysis of responses from the consultations undertaken under Sections 47 and 48 of the Planning Act 2008. Publication of the notice stating where and when the SOCC could be inspected took place on 21 June 2013 and on 28 June 2013, with the first exhibition held on 8 July 2013. The Section 48 Notices were published on 12 July 2013 and 19 July 2013, resulting in the Section 47 consultation and the Section 48 consultation running concurrently.
- 5.1.2 With both these consultations being undertaken at the same time it has not been possible to distinguish between responses from the two different consultations. Since the applicant gave equal consideration to all of the responses, the applicant does not consider it is necessary to distinguish between those from persons responding to the Section 47 consultation and those from persons responding to the Section 48 consultation. Responses to the consultations could be made by a number of methods as outlined below:
- (a) on-line questionnaire;
 - (b) paper copy questionnaire (handed in at an exhibition or posted to Norwich Northern Distributor Road, Norfolk County Council, Department of Environment, Transport and Development, County Hall, Martineau Lane, Norwich, NR1 2DH);
 - (c) telephone call to the applicant's call centre;
 - (d) e-mailing norwich.transport@norfolk.gov.uk;
 - (e) letter posted to Norwich Northern Distributor Road, Norfolk County Council, Department of Environment, Transport and Development, County Hall, Martineau Lane, Norwich, NR1 2DH.

5.1.3 Irrespective of the method of response, each comment was logged and analysed using the same process. Analysis has been undertaken on the basis of issues raised. Responses have been initially divided into the following main topics, which the applicant devised using knowledge gained from the extensive previous consultation on NATS and the NDR:

- comments regarding the need for the NDR;
- comments regarding alternatives to the NDR;
- comments regarding the route of the NDR;
- comments regarding the on-line proposals;
- comments regarding the off-line proposals;
- comments regarding walking/cycling/horse rider issues;
- comments regarding landscaping/planting issues;
- comments regarding wildlife issues;
- comments regarding noise/emission issues;
- comments regarding effects to specific roads;
- comments regarding land/property issues;
- comments regarding suggested changes;
- comments on the quality of consultation/exhibitions;
- other comments.

5.1.4 Within each of the main categories above the responses were then divided into subcategories, which are detailed in Appendix S of this report.

5.2 Section 47 and 48 Consultations - Summary of Responses

5.2.1 At each exhibition visitors were asked to sign-in (a record was also taken of the number of visitors unwilling to sign-in) so that the number of visitors at each venue could be documented. The number of recorded visitors to the exhibitions was as follows:

Date	Venue	Number of Visitors
Mon 8 July 1pm to 8pm	Rackheath Holy Trinity Church Hall, Salhouse Road, Rackheath, NR13 6PD.	166

Fri 12 July 1pm to 8pm	The Dussindale Community Centre, Pound Lane, Thorpe St Andrew, Norwich, NR7 0SR.	125
Sat 13 July 1pm to 8pm	Old Catton Village Hall, Church Street, Hall Drive, Old Catton, NR6 7DW.	146
Mon 15 July 1pm to 8pm	Postwick Village Hall, Ferry Lane, Postwick, NR13 5HL.	74
Tue 16 July 1pm to 8pm	Spixworth Village Hall, Crostwick Lane, Spixworth, NR10 3NQ.	216
Thu 18 July 1pm to 8pm	Easton Village Hall, Marlingford Road, Easton, NR9 5AD.	37
Sat 20 July 1pm to 8pm	Drayton Village Hall, Pond Lane, Drayton, NR8 6PP.	121
Mon 22 July 1pm to 8pm	Hellesdon Community Centre, Middletons Lane, Norwich NR6 5SR.	163
Wed 24 July 1pm to 8pm	Sprowston Diamond Centre, School Lane, Sprowston, NR7 8TR.	78
Thu 25 July 1pm to 8pm	Horsford Village Hall, Holt Road, Horsford, NR10 3DN.	149
Sat 27 July 1pm to 8pm	Breckland Hall, Breckland Road, New Costessey NR5 0RW.	40
Tue 30 July 1pm to 8pm	St Faiths Centre, Manor Road, Horsham, Norwich, NR10 3LF.	88
Fri 2 August 1pm to 8pm	Taverham Village Hall, Sandy Lane, Norwich, NR8 6JR.	225
Sat 3 August 1pm to 8pm	Gt Plumstead Village Hall, Church Road, Gt Plumstead, NR13 5AB.	125
Tue 6 August 9am to 4pm*	The Forum, Millennium Plain, Norwich, NR2 1TF.	285
Fri 9 August 1pm	Norman Centre, Bignold Road,	32

to 8pm	Norwich, NR3 2QZ.	
Mon 12 August 1pm to 8pm	Rackheath Holy Trinity Church Hall, Salhouse Road, Rackheath, NR13 6PD.	62

Table 5/1: Recorded Visitor Numbers at Public Exhibitions

* Note the open plan style of The Forum exhibition meant that it was not feasible to ask visitors to 'sign-in' on arrival. However, an approximate tally of those examining the display boards was recorded and is the figure detailed in this table.

5.2.2 Consultees were able to provide comments on the NDR via a number of methods. A total of 1492 responses to the Section 47 consultations were received as outlined below:

Method of Response	Number of Responses
On-line Questionnaire	497
Paper Copy Questionnaire	563
Telephone Call/PEM Enquiry	28
E-mail	328
Letter	76
Total	1492

Table 5/2: Summary of Section 47 Responses

5.2.3 Appendix S of this report contains details of all the responses received as part of the Section 47 consultation. These have been divided into a number of main categories. The number of comments for each category is outlined below.

Category	Number of Comments
Need for NDR	801
Alternatives to NDR	25

Route of NDR	423
On-Line Proposals	265
Off Line Proposals	98
Walking/Cycling/Horse Rider Issues	67
Landscaping/Planting Issues	206
Wildlife Issues	25
Emission/Noise Issues	178
Specific Road Effects	163
Land/Property Issues	36
Suggested Changes	23
Consultation/Exhibitions	96
Other Comments (of which 105 responses were provided that did not include any comment)	168
Requests for information	40

Table 5/3: Main Category of Section 47 Responses

5.3 Section 47 and 48 Consultations – Key Issues

5.3.1 Given the volume of comments received, the main categories above have been further sub-divided into groups of similar comment. Appendix S of this report details the groups of comments and the regard the applicant has given to these comments. The main issues identified from the Section 47 and Section 48 consultation responses are identified in the following sections.

Issue	Consultation result
<u>Need for NDR</u> General support for the project and comments that the NDR is needed	171 comments indicated that they thought the NDR was needed. They considered that the NDR would: <ul style="list-style-type: none"> • ease congestion; • provide access for growth of business and Norfolk's economy; • provide better access to the main road network; • help discourage rat running on inappropriate routes; • be an important part of NATS.
<p>Regard Given to Response: These responses have been considered by the applicant and regard has been given to them in putting together the need and alternatives case for the NDR, which is detailed in Volume 1 Chapter 3 of the Environmental Statement (Document Ref 6.1)</p> <p>Design Change: No</p>	
Issue	Consultation result
<u>Need for NDR</u> General comments not in favour of the project and that the NDR is not needed	460 comments were made that commented they did not support the NDR or that it was not needed. The reasons that they thought the NDR was not needed included: <ul style="list-style-type: none"> • the money could be spent elsewhere. Suggested examples were the A47 single carriageway sections, the Long Stratton bypass, the Norwich Outer Ring Road, the existing road network, public transport sustainable transport measures, other local authority services and other infrastructure to support development; • the NDR will generate more traffic that will increase congestion; • the NDR will not achieve anything; • there is no existing problem; • the A47 is adequate; • the NDR will create more rat runs on inappropriate roads; • the NDR will increase accidents;

	<ul style="list-style-type: none"> Norfolk County Council cannot afford maintenance of the NDR.
<p>Regard Given to Response: These responses have been considered by the applicant and regard has been given to them in putting together the need and alternatives case for the NDR, which is detailed in Volume 1 Chapter 3 of the Environmental Statement (Document Ref 6.1)</p>	
<p>Design Change: No</p>	
Issue	Consultation result
<p><u>Need for NDR</u> NDR will create associated development which is not supported</p>	<p>170 comments were made on the association of the NDR with development outlined in the Joint Core Strategy. There were general comments not in favour of the proposed development. In addition comments also considered that:</p> <ul style="list-style-type: none"> there will be insufficient other infrastructure/employment opportunities to support development; the NDR will only benefit developers; the development will have an adverse effect on the environment; mass development is more suitable elsewhere; the NDR will mean that nearby villages will become urbanised; the developments are not dependant on the NDR.

Regard Given to Response: The NDR was developed to resolve existing problems of congestion and rat-running to the north and east of Norwich and to improve access to business, the strategic road network, Norwich Airport and the wider area of North Norfolk. It has been a key element of NATS before the development of the JCS. However, the NDR would also provide supporting infrastructure for the housing growth identified in the JCS. The Transport Assessment for the NDR (Document Ref 5.5) demonstrates that without the NDR the planned growth would have unacceptable impacts on movements across a wide area of Norwich and the associated rural area. The relationship between the NDR and planned growth in the JCS is detailed in Volume 1 Chapters 2 and 3 of the Environmental Statement (Document Ref 6.1).

Development serves people's needs for homes, jobs and services. Infrastructure capacity for growth, and the requirement and deliverability of enhanced infrastructure has been tested through the development plan process, in this case the JCS for Broadland, Norwich and South Norfolk. Similarly the JCS is supported by a range of economic evidence demonstrating the job growth potential of the area. The Greater Norwich partners continue to work together to facilitate the timely delivery of infrastructure and jobs.

The JCS is supported by evidence and has been the subject of statutory consultation and public examination by the independent Planning Inspectorate. Individual applications for development in villages as elsewhere will be determined by the district councils in accordance with the plan unless there are material considerations that indicate otherwise.

Design Change: No

Table 5/4: Section 47 and 48 Consultations - Need for NDR Comments

Issue	Consultation result
<p><u>Alternatives to NDR</u> Suggested alternatives to the NDR</p>	<p>25 comments identified a number of different alternatives (not including alternative routes which are described in Table 5/6 below). These included:</p> <ul style="list-style-type: none"> • invest in sustainable transport measures such as public transport and walking/cycling; • improve the A47 (particularly single carriageway sections) and/or the A17; • improve existing roads (usually not specified); • introduce a congestion charge in Norwich; • improve the radial routes into and out of Norwich; • improve the Norwich Outer Ring Road; • invest in rail transport as well as roads.
<p>Regard Given to Response: These responses have been considered by the applicant and regard has been given to them in putting together the assessment of alternatives, which is detailed in Volume 1 Chapter 3 of the Environmental Statement (Document Ref 6.1).</p> <p>Individual regard to the suggestions is contained in Appendix S of this report.</p> <p>Design Change: No</p>	

Table 5/5: Section 47 and 48 Consultations - Alternatives to NDR Comments

Issue	Consultation result
<p><u>Route of NDR</u> A link is needed between the A1067 and A47 to the west of Norwich</p>	<p>349 comments were made on the need for a link between the A1067 and A47 to the west of Norwich. The main reasons for having this view were:</p> <ul style="list-style-type: none"> • having no link will increase traffic on the minor roads between Drayton/Taverham and Costessey/Easton; • concern that no access to the A47(w) or A11 will be provided from the A140 to the north side of Norwich; • the environmental issues associated with the Wensum Valley Special Area of Conservation could be overcome; • without the link traffic will increase on the A1067 Fakenham Road; • without the link traffic will increase in the Hockering to Lenwade area, and that the existing routes here are unsuitable; • without the link traffic will not reduce on the Norwich Outer Ring Road; • without the link traffic will increase through the Postwick Hub Junction; • a route without the A1067 to A47(w) link was never consulted upon. <p>11 comments were made that the A1067 to A47(w) link was not needed or expressed concern regarding the adverse affect a new link road would have on the Wensum Valley.</p> <p>6 comments suggested alternative route options to provide the A1067 to A47(w) link. Although each suggestion varied slightly they all suggested routes further west utilising the existing crossing of the River Wensum on the A1067 near Attlebridge.</p>
<p>Regard Given to Response: A road linking the A1067 and the A47(w) would have to cross the Wensum Valley, which is designated a Special Area of Conservation (SAC) under the European Directive on the Conservation of Natural Habitats and of Wild Fauna and Flora - often referred to as the Habitats Directive. An assessment of options across the Wensum Valley concluded, in 2005, that significant impacts on the SAC would be likely, and there was doubt as to whether, under the terms of the Habitats Directive, it would be possible to design an acceptable scheme. This in turn raised the prospect that consent for a</p>	

wider scheme including such a link might not be granted. On 19 September 2005, the applicant’s Cabinet resolved to have no NDR link between the A47(w) and the A1067. It therefore did not form part of the adopted route.

At its meeting of 16 September 2013 the meeting of the Norfolk County Council resolved to recommend to Cabinet that they submit an application for a DCO in respect of the NDR as proposed (i.e. between the A47 at Postwick and the A1067 near Attlebridge) and to also commission a report on a feasibility study of providing a link across the Wensum Valley from the A1067 to the A47(w). Whilst at its meeting of 7 October 2013 the applicant’s Cabinet resolved that a “scoping report on the feasibility of providing a link across the Wensum Valley from the A1067 – A47 be written once consultation work was completed”, this study has not been carried out and there is therefore currently no proposal establishing the form any link between the A1067 and A47(w) would take, or indeed whether any such link is feasible. The Transport Assessment for the NDR (Document Ref 5.5.) shows that the NDR can provide substantial benefits without a further link between the A1067 and A47(w) and that the NDR will reduce daily traffic on existing routes between the A1067 and the A47(w) between Drayton/Taverham and Costessey. The feasibility and environmental acceptability of a link to the A47(w) have not been established and the previous assessment in 2005 discarded this option. Accordingly, it is the position of the applicant that the NDR can and should be considered on its own merits without such a link.

Design Change: No

Issue	Consultation result
<p><u>Route of NDR</u> Suggested alternative routes for the NDR</p>	<p>28 comments suggested alternative routes for the NDR, of which the most frequent was for an inner orbital link road using routes linking proposed developments (mainly between Postwick and Norwich Airport). Other suggestions included:</p> <ul style="list-style-type: none"> • the Pink Route identified in previous consultations; • a route closer to the city; • the Green Route identified in previous consultations; • the route of the NDR should be to the north of Spixworth;

	<ul style="list-style-type: none"> • the route of the NDR should be to the north of Horsford; • the NDR should not cut through Thorpe Woodlands; • the route of the NDR should cut straight across the airport rather than being aligned around it. <p>The Pink Route and suggestions for a route closer to the city are similar alternatives to the suggestions for an inner orbital link road.</p>
<p>Regard Given to Response: The Pink Route is similar to an inner orbital road closer to the city, and therefore has been considered as Alternative No 5 in the need and alternatives case (Volume 1 Chapter 3 of the Environmental Statement (Document Ref 6.1)).</p> <p>The proposed NDR route passes around the airport boundary, because of the long term plans for the airport. This alignment has not changed since the preferred route was adopted by the applicant in 2005. Whilst the northeast runway is closed, the applicant understands that the long term plans for the area is for aviation related activities. These plans, which would involve moving aircraft into and out of this area, would be jeopardised by a route across the airport. This would inevitably lead to a substantial claim for compensation against the applicant.</p> <p>Regard given to the individual responses suggesting that the NDR passes too close to specific areas is given in Appendix S of this report.</p> <p>Design Change: No</p>	

Table 5/6: Section 47 and 48 Consultations - Route of NDR Comments

Issue	Consultation result
<p><u>On-Line Proposals</u> Dual carriageway section of the NDR between Fir Covert Road and Fakenham Road</p>	<p>The consultation proposals included a dual carriageway section for the NDR between Fir Covert Road and Fakenham Road but also included an alternative option for a single carriageway. Views were sought on both options.</p> <p>Of the responses that commented on the options there was a clear majority of 49 comments in favour of a dual carriageway, against 8 comments in favour of a single carriageway. The reasons provided for this were:</p> <ul style="list-style-type: none"> • that sometime in the future a dual carriageway section will be needed anyway; • a dual carriageway section reduces the likelihood of accidents; • in the future this will provide for a better link should the NDR ever extend through to the A47 to the west of Norwich; • without a dual carriageway section there will be bottlenecks and congestion; • a dual carriageway will reduce the likelihood of rat running on other routes; • a dual carriageway will remove traffic from the A1067 Fakenham Road. <p>Of those in favour of a single carriageway, the reasons provided for this were:</p> <ul style="list-style-type: none"> • the NDR will link to a single carriageway when it meets the A1067 Fakenham Road; • a single carriageway is more cost effective and has less environmental impacts; • a dual carriageway section will just cause a bottleneck at its junction with the A1067 Fakenham Road.
<p>Regard Given to Response: Having had regard to these comments the proposals submitted for a DCO include a dual carriageway section of carriageway between Fir Covert Road and Fakenham Road.</p> <p>Design Change: No</p>	
Issue	Consultation result
<p><u>On-Line Proposals</u></p>	<p>46 comments were made relating to the Postwick Hub Junction and suggesting that it was too complicated</p>

<p>Postwick Hub Junction</p>	<p>and that this will result in:</p> <ul style="list-style-type: none"> • increased journey times and distances travelled through the junction; • drivers avoiding the junction; • increased queuing; • impacts on local residents. <p>These comments included suggestions to change the junction, such as:</p> <ul style="list-style-type: none"> • keep the eastbound diverge slip road open; • keep both the eastbound the merge and diverge slip roads open; • do not expand the park and ride; • provide a separate path on New Postwick Bridge for walkers and cyclists.
<p>Regard Given to Response: During design development a number of significant engineering constraints have influenced the scheme design. These include the River Yare/Railway Bridge, the existing Postwick Bridge, a high pressure gas main and the nearby property settlements at Heath Farm and Postwick village. Given the constraints and having assessed a number of options it was concluded that, if the existing capacity problems are to be addressed and the committed development at Broadland Gate Business Park is to be accommodated, then removal of the existing eastbound diverge slip road and the provision of a new diverge slip road running parallel with the existing A47, is the only feasible solution.</p> <p>Due to the configuration requirements to accommodate a new eastbound diverge slip road, a new separate Postwick bridge crossing the A47 provides a connection between the Postwick North East Roundabout and the Park and Ride Junction.</p> <p>Design Change: No</p>	
<p>Issue</p>	<p>Consultation result</p>
<p><u>On-Line Proposals</u> Fir Covert Road Roundabout</p>	<p>There was a slight majority of 12 responses expressing support for the re-introduction of the Fir Covert Road Roundabout with the NDR, against 10 responses not in favour of this proposal. Those in favour of the proposal suggested that a roundabout here would be beneficial to:</p> <ul style="list-style-type: none"> • businesses on Fir Covert Road; • residents of Thorpe Marriott by reducing traffic here.

	<p>Those not in favour suggested that there were already too many roundabouts on the NDR or that a roundabout here would:</p> <ul style="list-style-type: none"> • encourage rat running on the minor roads between the A1067 at Drayton/Taverham and the A47 at Costessey/Easton; • be difficult to access due to the volume of traffic on the NDR; • cause increased traffic through the Fakenham Road/Beech Avenue/Fir Covert Road junction, <p>There was also a suggestion that Fir Covert Road should be bridged over the NDR and not have direct access to it.</p>
<p>Regard Given to Response: There has been extensive consideration regarding the provision of the roundabout at the Fir Covert Road junction with the NDR. After the April/May/June 2012 consultations the roundabout was relocated to the junction with Fakenham Road. The February/March 2013 consultations identified support for the roundabout at the Fakenham Road/NDR junction. However, it also identified concerns regarding the closure of Fir Covert Road, particularly by businesses there. Having given regard to these concerns, the NDR proposal was further amended so that it included an additional roundabout at the NDR junction with Fir Covert Road. This was in addition to the roundabout at the Fakenham Road/NDR junction.</p> <p>The applicant considers the provision of a 4 arm roundabout here as the most appropriate solution, particularly as traffic flow on Fir Covert Road is predicted to be similar or lower with the NDR. See Appendix I to the Traffic Forecasting Report (Document Ref 5.6) for forecast traffic flows.</p> <p>Design Change: No</p>	
Issue	Consultation result
<p><u>On-Line Proposals</u> Holt Road Closure at A140 Cromer Road Junction</p>	<p>14 comments suggested that Holt Road should not be closed at its junction with the Cromer Road Junction. The reasons provided for this were:</p> <ul style="list-style-type: none"> • the re-aligned Drayton Lane and its roundabout junction with the NDR and the major/minor priority junction with Reepham Road would not be required; • it will result in increased traffic through Drayton/Hellesdon; • it will create more complicated and longer journeys between the B1149 and A140.

Regard Given to Response: Prior to 2009 the applicant intended to bring the Holt Road and Cromer Road together at the existing junction, modified to pass over the NDR. However, work at the time showed that the most effective solution would be to link the Holt Road directly to the NDR at Drayton Lane instead of at Cromer Road.

Design Change: No

Issue	Consultation result
<u>On-Line Proposals</u> Middle Road Bridge	46 comments were not in favour of the proposed bridge over the NDR at Middle Road. The main reasons for this view were: <ul style="list-style-type: none"> • the bridge will encourage more traffic to use Middle Road as a through route; • Middle Road is unsuitable for through traffic, including farm vehicles; • the additional cost of the Middle Road Bridge is not warranted. 2 responses suggested that Middle Road Bridge will improve access for the village of Gt Plumstead and avoids severance of the local community.

Regard Given to Response: There has been extensive consideration of Middle Road Bridge and whilst the concerns of residents of Middle Road are acknowledged the wider view of the highway network (including the alternative routes to Middle Road) need to be considered. There has also been extensive discussion with the parish council on this issue and they have expressed a similar view. On this basis the bridge is to be retained as part of the proposal, so there is no change to the scheme.

Design Change: No

Issue	Consultation result
<u>On-Line Proposals</u> Number of roundabouts on NDR	30 comments suggested that there are too many roundabouts on the NDR which will cause: <ul style="list-style-type: none"> • delays on the NDR; • safety issues at the junctions; • delays on the radial routes. 5 further comments identified the main junctions of concern being: <ul style="list-style-type: none"> • Cromer Road Junction;

	<ul style="list-style-type: none"> • Wroxham Road Roundabout; • Airport Roundabout, including concern about the noise of vehicles accelerating/decelerating here; • Plumstead Road Roundabout. <p>The comments suggested that the junctions should be grade separated like those on the Norwich Southern Bypass.</p>
<p>Regard Given to Response: The NDR is a distributor road and not a bypass and so not many users are expected to drive from one end to the other. In view of this the delay at the roundabouts is not expected to be a deterrent to the use of the route. Grade separated junctions would have a much greater environmental impact and be more difficult to justify.</p> <p>The Airport Roundabout is required to accommodate the 90° change in direction of the NDR around the north of the airfield, and to provide access to the Petans training facilities and secure access to Norwich International Airport.</p> <p>Design Change: No</p>	
Issue	Consultation result
<p><u>On-Line Proposals</u> Drayton Lane link between NDR and Reepham Road</p>	<p>8 comments on the Drayton Lane link tended to express concern about the closure of Drayton Lane, which would increase traffic using Hall Lane. The comments suggested that Hall Lane is a poorer standard than Drayton Lane. Other comments suggested that the link was not adequate enough for the volumes of traffic, it would increase journey times/distances or that it passed through the area know as Bugg’s Grave.</p> <p>9 further responses suggested alternatives, which included:</p> <ul style="list-style-type: none"> • do not close Drayton Lane south of its junction with Reepham Road; • that Drayton Lane should be bridged over the NDR and not have direct access to it; • provide a roundabout at the Holly Lane/Hall Lane junction with Reepham Road; • provide a roundabout at the Drayton Lane junction with Reepham Road.
<p>Regard Given to Response: Further tests have been undertaken in the model to look into the option of a roundabout at the Drayton Lane/Reepham Road junction and also a more conventional priority (‘T’) junction. The findings for all options tested, some of which also included traffic calming on the section of Hall Lane between Drayton Lane South and Drayton village, showed that the use of Drayton Lane South, either instead of, or as well as Hall Lane, was less effective at reducing traffic flows into</p>	

Drayton than the NDR scheme as proposed. In view of this, and the fact that the NDR scheme as proposed showed a benefit of reducing the amount of traffic on Hall Lane when compared to a non-NDR scenario, there was no evidence to support changing the NDR scheme as proposed.

One of the purposes of the NDR is to provide maximum connectivity for communities to distribute traffic movements. Holt Road, as a B road, is considered a key radial route and therefore the connectivity provide by Drayton Lane from the NDR is important.

The applicant anticipates that the existing situation at the Reepham Road junction with Holly Lane/Hall Lane junction will improve as Holly Lane is proposed to be stopped up for through traffic. Therefore one arm of the staggered junction will become an 'access only' road.

Design Change: No

Table 5/7: Section 47 and 48 Consultations - On-Line Proposals Comments

Issue	Consultation result
<u>Off-Line Proposals</u> Number of road closures	22 comments were made that there were too many closures within the proposed scheme. Some commented that the closures were unnecessary and will result in: <ul style="list-style-type: none"> • increased journey times and distances; • increased traffic on other roads.
<p>Regard Given to Response: The applicant has tried to keep the number of road closures to a minimum and they are generally only provided for reasons of highway safety where minor roads are severed by the NDR or to encourage traffic to use more appropriate routes.</p> <p>Design Change: No</p>	
Issue	Consultation result
<u>Off-Line Proposals</u> North Walsham Road/Crostwick Lane proposals	30 comments relating to the North Walsham Road/Crostwick Lane junction proposals tended to suggest alternative proposals here. The main suggestions were: <ul style="list-style-type: none"> • provide a roundabout junction; • do not close Rackheath Lane; • provide traffic signals; • keep Rackheath Lane open to NMUs. 2 responses supported the proposals suggesting that this would prevent rat running via Crostwick Lane and Rackheath Lane and that a roundabout/traffic signals was not needed.
<p>Regard Given to Response: Whilst the comments are noted, the reasons for the closure are primarily to improve highway safety at the junction. Closure of Rackheath Lane will simplify turning movements allowing drivers waiting at the Crostwick Lane arm to concentrate on the vehicle movements on the main road.</p>	

Design Change: No	
Issue	Consultation result
<u>Off-Line Proposals</u> Closure of Church Street	<p>6 comments were in favour of the proposal not to close Church Street. Of the 14 comments suggesting that the road should be closed, the reasons for this view tended to be because:</p> <ul style="list-style-type: none"> • it is a poor standard road; • otherwise it will be used as a rat run; • of its poor junctions with the B1149 and A140; • it would protect residents from the effects of through traffic. <p>Comments against a closure were concerned that this would increase journey times/distances.</p>
<p>Regard Given to Response: The applicant reconsidered the closure following the public consultations in April/May/June 2012 and decided not to close Church Street. The purpose of the NDR is to remove traffic from some of the less suitable roads, such as Church Street, around north Norwich. This is reflected in the traffic modelling results which show that with Church Street left open; only very localised traffic would use it. Whilst it has been decided not to close Church Street, the applicant will monitor traffic flows post introduction of the NDR and consider re-introducing the closure if flows are not found to reduce. This was the proposal presented for the pre-application consultations and the applicant's position regarding this closure remains unchanged.</p>	
Design Change: No	
Issue	Consultation result
<u>Off-Line Proposals</u> Closure of Green Lane East/Broad Lane at its junction with Plumstead	<p>Of the comments relating to the closure of Green Lane East/Broad Lane at its junction with Plumstead Road, 7 suggested that the road should be closed because:</p> <ul style="list-style-type: none"> • it is already a dangerous junction; • it will discourage rat running. <p>Of the 12 comments against a closure there was concern that this will increase journey times/distances, particularly between Rackheath and Gt Plumstead.</p>

Road	Suggested alternatives to the proposals for this junction were a mini roundabout or the creation of a slip road diverging from Broad Lane and joining Plumstead Road to the west of the existing junction.
<p>Regard Given to Response: The closure of Green Lane East/Broad Lane at its junction with Plumstead Road will remove the existing crossroads junction making it a more conventional and safer T-junction. This element of the scheme together with the provision of an all purpose road bridge over the NDR at Middle Road was developed in consultation with the parish council as the preferred access solution for the local communities.</p> <p>Design Change: No</p>	

Table 5/8: Section 47 and 48 Consultations - Off-Line Proposals

Issue	Consultation result
<p><u>Walking/Cycling/Horse Riding Issues</u> Need more NMU facilities</p>	<p>There were 16 comments that provided general suggestions that more NMU facilities should be proposed.</p> <p>A further 17 comments suggested more NMU facilities at specific locations. The most frequently suggested improvements were:</p> <ul style="list-style-type: none"> • along the A140 between Horsham and the city centre; • along the entire route of the NDR; • along the main radial routes into and out of Norwich; • along Reepham Road between Thorpe Marriott and Hellesdon; • between Horsford and the city centre; • between Postwick and Whitlingham Park; • along Plumstead Road between Thorpe End and the city centre; • facilities in the Drayton area; • in the Rackheath area; • linking to the Marriotts Way.
<p>Regard Given to Response: During the April/May/June 2012 public consultations the applicant had various requests for improved walking and cycling facilities. As a result a strategy was developed to consider and prioritise these consultation requests. The strategy published as part of the February/March 2013 public consultations identified a network of routes to link areas that generate NMUs (such as villages, employment areas, future development) with each other, the Norwich Cycle Network and the Marriotts Way. Part of these routes utilised narrow country lanes, roads closed to motor vehicles and existing public rights of way. The applicant has prioritised NMU improvements on this network, and these improvements have included new NMU facilities as part of the proposals.</p> <p>The regard given to suggestions for improvements at specific locations is detailed in Appendix S to this report.</p> <p>Design Change: No</p>	

Issue	Consultation result
<p><u>Walking/Cycling/Horse Riding Issues</u> The NDR represents a barrier to NMUs</p>	<p>In addition to the requests for extra NMU facilities there were 22 comments that suggested the NDR represented a barrier to NMUs. Specific comments highlighted:</p> <ul style="list-style-type: none"> • severance by the NDR at Smee Lane; • severance by the NDR at St Faiths Road/Quaker Lane; • concern regarding the ability of NMUs to cross at the roundabout junctions with the NDR; • severance of the NDR between Bullock Hill and the Petans training facility, including requests for a bridge or underpass at this location; • severance by the NDR at Holly Lane; • concern regarding the ability of NMUs to cross the NDR when accessing Norwich from Spixworth.
<p>Regard Given to Response: The work described above identified key routes for NMUs. Where these key routes crossed the NDR, the applicant has provided segregated crossing facilities. These include NMU facilities on the Bell Farm Bridge, Buxton Road Bridge, Newman Road Bridge, Middle Road Bridge, New Postwick Bridge and under the Norwich to Sheringham railway line bridge.</p> <p>The regard given to concern about severance at specific locations is detailed in Appendix S to this report.</p> <p>Design Change: No</p>	

Table 5/9: Section 47 and 48 Consultations - Walking/Cycling Horse Riding

Issue	Consultation result
<p><u>Landscaping/Planting Issues</u> Effects of NDR on landscape and type of planting</p>	<p>190 comments were made regarding the effects of the NDR on the landscape and wildlife habitats or requested more planting.</p> <p>Additional comments suggested specific locations where additional landscaping and planting is required. These were:</p> <ul style="list-style-type: none"> • between the NDR and Rackheath; • to the area of Beeston Park; • to the north of Thorpe Marriott; • to the top of the embankments at the Plumstead Road/Norwich to Sheringham railway line bridge, • between the NDR and Spixworth. <p>6 further comments made suggestions on the types of planting to be used, and these included:</p> <ul style="list-style-type: none"> • mature trees rather than saplings to provide better early screening; • evergreen species to provide winter screening; • wild flower meadows in the landscaping areas and in the verges of roads where closures are proposed.
<p>Regard Given to Response: It is acknowledged that the proposed scheme will result in the loss of some 6,000 trees. However, the landscaping proposals propose a replacement ratio of, as a minimum, 2:1. An Environmental Impact Assessment (EIA) has been undertaken and the details of the planting can be found in the Volume 1 Chapter 7 of the Environmental Statement (Document Ref 6.1).</p> <p>Design Change: Yes – additional landscaping has been added to the proposals, particularly in the area around Beeston Park, Rackheath Park and The Springs. See Design Change Ref: 8.5, 9.2 and 9.6 in Appendix V to this report.</p>	

Table 5/10: Section 47 and 48 Consultations - Landscaping/Planting Comments

Issue	Consultation result
<p><u>Wildlife Issues</u> Effects of NDR on wildlife</p>	<p>11 comments were made on the general effect of the NDR on wildlife and 6 comments suggested the NDR would be a barrier to wildlife. These comments included:</p> <ul style="list-style-type: none"> • the proposals will not compensate for wildlife loss; • the impact on wildlife has not been provided and further studies are needed. <p>Further comments that identified specific locations noted that:</p> <ul style="list-style-type: none"> • the woodlands around Newman Road Rackheath would be adversely affected; • the NDR would be a barrier to wildlife in the area of Newman Road woodlands and between The Springs and the east side of the NDR. <p>The specific comments regarding the proposed mitigation measures included:</p> <ul style="list-style-type: none"> • the bat gantries will not work; • support for the proposed bat gantries; • need to consider species other than bats; • the proposed planting will aid wildlife.
<p>Regard Given to Response: Wildlife protection has been a crucial part of the NDR from a very early stage. As such, an extensive landscaping scheme has been prepared, that will tie up closely with the need to preserve ecological corridors throughout the wider landscape. It will comprise of native, locally present species of woodland, scrub and grassland habitats, hedgerows, and wetland areas. It will tie in with landscaping schemes of adjacent developments. Extensive mitigation to reduce the loss of habitats has been incorporated into the scheme. Where habitats are to be directly affected by the NDR, clearance will be undertaken outside of the breeding season and new habitats of equal or greater value will be put in their place and green bridges built into the scheme will preserve foraging in the area of disturbance.</p> <p>Adverse effects to the woodland at Newman Road, Rackheath, as with all habitats, have been minimised as far as possible. The Newman Road Bridge includes non-standard aspects to allow bats to cross the NDR. Some very basic bat gantries have been</p>	

proven not to be effective. However, the applicant has taken advice from the bat specialists, and would install a bat gantry design that it is confident will work. They would be installed early in the construction process and tie into the landscaping scheme to provide effective crossing points.

A number of surveys have been carried out for a variety of species to inform the Environmental Statement (Document Ref 6.1), these include, but are not limited too; badgers, bats, great crested newts, birds, invertebrates, reptiles, otters and water voles, brown hares and deer. This is in addition to surveys looking at habitats, trees and hedgerows.

Design Change: No

Table 5/11: Section 47 and 48 Consultations - Wildlife Comments

Issue	Consultation result
<p><u>Emission/Noise Issues</u> Effects of noise and emissions generate by the NDR</p>	<p>There were 123 comments on the effects of potential noise and emissions generated by the NDR. These included:</p> <ul style="list-style-type: none"> • the NDR will increase CO2 emissions and that this was contrary to government emission reduction targets; • emissions will be a health risk to those living close to the NDR; • the loss of vegetation resulting from the proposals will reduce air quality; • at the time of the consultations there was no information available regarding predicted noise/emissions generated by the NDR. <p>A further 55 responses identified specific areas of concern, which included:</p> <ul style="list-style-type: none"> • Thorpe End; • Rackheath; • Plumstead Road; • Spixworth; • Thorpe Marriott; • Reepham Road; • Horsford; • Drayton; • Buxton Road Bridge; • Taverham; • Postwick; • Old Catton; • Gt and Lt Plumstead; • Witton; • Hellesdon. <p>Suggestions to mitigate against the noise and pollution included:</p> <ul style="list-style-type: none"> • the NDR carriageway should utilise a low noise surface; • sound proof hoarding should be provided on top of verges/embankments.
<p>Regard Given to Response: Noise and Air Quality assessments are included within Volume 1 Chapters 4 and 11 of the Environmental Statement (Document Reference 6.1) and these consultation responses assisted in the assessment of both these topics.</p> <p>Climate change is one of the topics considered in the Environmental Impact Assessment (EIA) process. The assessments</p>	

included in the EIA give consideration to:

- changes in carbon emissions as a result of the scheme;
- impacts relevant to climate change adaptation including the potential influence of climate change on the project and the contribution of the project to wider resilience to changes in climate.

These assessments are included in the Environmental Statement (Document Ref 6.1).

The exact specification for surfacing will be considered at the detailed design stage, although at this current time the intention is to use a low noise carriageway surface.

Design Change: No

Table 5/12: Section 47 and 48 Consultations - Emissions/Noise Comments

Issue	Consultation result
<u>Specific Road Effects</u> NDR affects on Fakenham Road	22 comments expressed concern that the NDR will increase traffic on Fakenham Road and included a suggestion for traffic signals where it meets the NDR.
<u>Specific Road Effects</u> NDR affects on routes between Taverham/Drayton and Costessey/Easton	33 comments expressed concern that the proposals will increase traffic/rat running on routes between Taverham/Drayton and Costessey/Easton. The particular areas of concern were: <ul style="list-style-type: none"> • through Ringland Hills and affecting the environment here. There were requests for speed limits here; • Beech Avenue, Taverham which is a residential road containing a school. There were suggestions to make Beech Avenue access only; • on West End, The Street, Folgate Lane and Longwater Lane through Costessey. Comments include suggestion for more traffic calming to discourage this; • on the Fakenham Road/Beech Avenue/Fir Covert Road junction. There were suggestions for improvements here, such as a roundabout or traffic signals. <p>A further 8 responses expressed concern about the affects on the Fakenham Road/Beech Avenue/Fir Covert Road junction. There were suggestions for improvements here, such as a roundabout or traffic signals.</p>
<u>Specific Road Effects</u> NDR affects on Plumstead Road through Thorpe End	16 comments expressed concern that the proposals will increase traffic on Plumstead Road through Thorpe End. They included suggestions for: <ul style="list-style-type: none"> • traffic calming on Plumstead Road; • more pedestrian crossings on Plumstead Road.

<p><u>Specific Road Effects</u> NDR affects on Holt Road through Horsford</p>	<p>13 comments expressed concern that the proposals will increase traffic on Holt Road through Horsford. They included suggestions for:</p> <ul style="list-style-type: none"> • traffic calming on Holt Road through Horsford; • a weight restriction on Holt Road through Horsford.
<p><u>Specific Road Effects</u> NDR affects on Reepham Road through Hellesdon</p>	<p>11 comments expressed concern that the proposals will increase traffic on Reepham Road. They included suggestions for:</p> <ul style="list-style-type: none"> • traffic calming on Reepham Road through Hellesdon; • a pelican crossing across Reepham Road between Woodview Road and Gowing Road.
<p><u>Specific Road Effects</u> NDR affects on Wroxham Road</p>	<p>14 comments expressed concern that the proposals will increase traffic on Wroxham Road. This included concern on the effects to Wroxham/Hoveton and comment that it would discourage visitors to these villages. They included suggestions for:</p> <ul style="list-style-type: none"> • improving the Wroxham Road/Beeston Lane junction; • providing more footways on Wroxham Road between the park and ride site and Sprowston.
<p><u>Specific Road Effects</u> NDR affects on other radial routes</p>	<p>8 comments expressed concern that the proposals will increase traffic on radial routes and identified Cromer Road, North Walsham Road and Salhouse Road in particular.</p>
<p><u>Specific Road Effects</u> NDR affects on Drayton Wood Road and Middletons Road</p>	<p>13 responses expressed concern that the proposals will increase traffic on Drayton Wood Road and Middletons Road in Hellesdon. They included suggestions for:</p> <ul style="list-style-type: none"> • improvements to the Middletons Lane/A1067 Drayton High Road junction; • more pedestrian crossings on Middletons Lane.

in Hellesdon	
<p><u>Specific Road</u></p> <p><u>Effects</u></p> <p>Comments on the affect of the NDR on other roads</p>	<p>25 comments expressed concern about the affects of the NDR on other roads. These were:</p> <ul style="list-style-type: none"> • on routes through Thorpe Marriott; • on Green Lane West through Rackheath by HGVs; • through the Fifers Lane/St Faiths Road junction (including a suggestion that a separate access to the airport is needed from the NDR); • on the B1108 Watton Road through Colney; • on Brands Lane/Bilney Lane in the parish of Felthorpe (including a suggestion that this road be made access only); • on Broad Lane (between Hare Road and Water Lane) in the parish of Gt and Lt Plumstead, (including a suggestion that this road be made access only); • on Crostwick Lane through Spixworth; • on Fakenham Road through Lenwade and Morton on the Hill (including a suggestion for better enforcement of speed limits); • on The Street through Felthorpe; • on Felthorpe Road through Attlebridge; • through the Reepham Road/Fir Covert Road junction (including a suggestion for this to be improved); • on the route between the A47 at Hockering and the A1067 at Lenwade (including a suggestion that the route is unsuitable for HGVs).
<p>Regard Given to Response: The regard given to individual responses regarding the above roads is contained in Appendix S to this report.</p> <p>Design Change: No</p>	

Table 5/13: Section 47 and 48 Consultations - Effects on Specific Roads Comments

Issue	Consultation result
<u>Land/Property Issues</u> Loss of agricultural land and affects to property	Of the comments directly relating to the effects on land, 22 commented on the area of agricultural land lost to the scheme. 14 also commented: <ul style="list-style-type: none"> • that the prospect of the NDR has/will devalue their properties; • that the prospect of the NDR has meant that they have been unable to sell their properties; • that they want to/will be seeking compensation for the effects of the NDR.
<p>Regard Given to Response:</p> <p>The loss of productive agricultural land and commitments regarding the minimisation of impacts to soils are detailed in Volume 1 Chapter 13 and Volume 1 Chapter 9 of the Environmental Statement (Document Ref 6.1). Assessments of Noise and Air Quality are contained in Volume 1 Chapter 4 and 11 of the Environmental Statement (Document Ref 6.1).</p> <p>Under Part 1 of the Land Compensation Act 1973, at the appropriate time, compensation can be sought by people who own and also occupy certain property that has been reduced in value by physical factors caused by the use of a new or altered road but have not had any land acquired for the scheme itself.</p> <p>Design Change: No</p>	

Table 5/14: Section 47 and 48 Consultations - Land/Property Comments

Issue	Consultation result
<u>Consultation/Exhibitions</u> Area of consultation	25 comments were made that the consultation area was inadequate and should have been wider, including comments that it should have included the whole of Norwich, north Norfolk or the whole of Norfolk. 1 comment noted that the consultation area was satisfactory.
<u>Consultation/Exhibitions</u> Other Consultation Comments	<p>16 responses suggested that the consultation was inadequate. These included comments that:</p> <ul style="list-style-type: none"> • the NDR is not an NSIP project and no consultation was undertaken on whether it should be an NSIP; • the status of the NDR as an NSIP project changed during the consultation; • there was no publicity of the exhibitions; • there was no consultation on alternative routes; • the PEIR missed important areas of environmental impact. <p>24 comments were made that the exhibitions were good, whilst 8 comments noted that the exhibitions were not satisfactory.</p>
<u>Consultation/Exhibitions</u> Postal information	13 comments related to the fact that some residents of Rackheath had received the consultation letter on the day of the first exhibition.
<p>Regard Given to Response: Section 4.4 of this report defines the applicant's rationale for choosing the consultation area and the subsequent consultations undertaken.</p> <p>When the applicant commenced the statutory pre-application process, the NDR fell within the criteria for a NSIP under the Planning Act 2008. In order to obtain consent for the NDR, therefore, the applicant had to follow the Planning Act 2008 process. On 24 July 2013, the Highway and Railway (Nationally Significant Infrastructure Project) Order 2013 (S.I. 2013/1883) (the Highways Order) was made, coming into force on 25 July 2013. The Order amended Section 22 of the Planning Act 2008, so that a project such as the NDR would not (from 25 July 2013 onwards) fall within the definition of a NSIP.</p> <p>The applicant considered that the NDR was, nonetheless, of national significance. Accordingly, on 25 July 2013 the applicant</p>	

submitted a qualifying request to the Secretary of State for a direction under Section 35(1) of the Planning Act 2008 that the NDR was a project of national significance and so should be treated as development for which development consent was required. A Section 35 direction was made on 9 August 2013.

The issue of some residents of Rackheath receiving a consultation letter on the day of the first exhibition is discussed in Section 4.6 of this report (the applicant's response was to provide for an additional exhibition on 12 August 2013 (between 13:00 to 20:00) at the Holy Trinity Church on Salhouse Road. Letters notifying people of this new exhibition were sent to addresses within Rackheath Parish (Appendix K-5 to this report).

Design Change: No

Table 5/15: Section 47 and 48 Consultations - Consultations/Exhibition Comments

5.4 Section 47 and 48 Consultations - Conclusions

- 5.4.1 The Section 47 and Section 48 consultations have generated 1492 responses. This is considered a good response rate and has allowed the local communities' main issues and views on the NDR to be identified. In view of the volume of comments received, these were grouped into similar category subjects and detailed in Appendix S of this report. The key issues relating to the scheme proposals are summarised below:
- 5.4.2 Need for the NDR - Of the responses received the most frequent comment was associated with the need for the NDR. Of those that suggested the NDR was not needed (460 comments) the main reason for this view was that the money could be better spent elsewhere. Of those that thought the NDR was needed (171 comments), the majority did not give a reason for this view or suggested that the NDR would ease congestion.
- 5.4.3 NDR will create associated development – 170 comments were made regarding the development that has been associated with the NDR. Comments suggested that the NDR only benefited developers. They expressed concern about the impact development would have on the existing infrastructure, village environment and rural environment.
- 5.4.4 Alternatives to the NDR – 25 comments identified a number of suggested alternatives to the NDR. The main alternative identified was the investment in sustainable transport or improvements to the A47/A17.
- 5.4.5 Need A1067 to A47 link – 349 comments were made regarding the NDR not having a link between the A1067 and the A47 to the west of Norwich. Of these comments most did not give a reason for this view or considered that it would result in vehicles using less suitable routes between Taverham/Drayton and Costessey/Easton. 11 comments were not in favour of providing this link and 6 suggested routes for this link. The most frequently suggested alternative was a link between the A1067 and A47(w) that was further west

and utilised the existing crossing of the River Wensum via the A1067 near Attlebridge.

- 5.4.6 Suggested alternative routes – 28 comments suggested alternative routes for the NDR. The most frequently suggested alternative route was an inner orbital link which would be closer to Norwich. This would link with or utilise routes through proposed developments.
- 5.4.7 Dual carriageway between Fir Covert Road and Fakenham Road - Whilst the consultation proposals showed a dual carriageway section between the Fir Covert Road Roundabout and the Fakenham Road Roundabout, the applicant also consulted on an alternative option of a single carriageway. Of those that commented on these options there was a majority in favour of dual carriageway (49 comments) when compared to those in favour of the single carriageway option (8 comments).
- 5.4.8 Postwick Hub Junction – Comments on the Postwick Hub Junction tended to express concern that it is over complicated (46 comments) and will result in increased journey times and queuing. The most frequently suggested change was to keep open the eastbound diverge slip road from the A47 or keep both the eastbound diverge and eastbound merge slip roads open.
- 5.4.9 Fir Covert Road Roundabout – Of those that commented on this junction there was a slight majority in favour of this roundabout being re-introduced (12 comments) when compared to those against it being re-introduced (10 comments).
- 5.4.10 Holt Road closure – There were 14 comments suggesting that Holt Road should not be closed at its junction with the A140 Cromer Road Junction.
- 5.4.11 Middle Road Bridge – Of the 48 comments about the provision of a bridge over the NDR at Middle Road, the majority (46 comments) did not support the proposal. A number of these responses came from residents of Middle Road, and they expressed concern that the road would experience increased through traffic and not be able to accommodate this. The most frequent suggestion was the removal of this bridge.

-
- 5.4.12 Roundabout junctions on the NDR – 30 comments considered that there were too many roundabout junctions on the NDR. They suggested that these would cause delays and more safety risks. Grade separated junctions, similar to those on the A47 Southern Bypass, was the most frequent alternative suggestion. A further 5 comments identified specific roundabouts as a concern.
- 5.4.13 Drayton Lane link – The 17 comments directly relating to the Drayton Lane link tended to express concern that the closure of Drayton Lane would increase traffic using Hall Lane, which they considered it to be the poorer standard road. Suggestions were made that a roundabout should be provided at the Reepham Road/Drayton Lane junction.
- 5.4.14 Number of road closures – 22 comments expressed concern regarding the number of local road closures, suggesting that these will increase journey times and distances.
- 5.4.15 North Walsham Road/Crostwick Lane junction – Of the 32 comments regarding this junction the majority expressed concern about the proposals and there were requests not to close Rackheath Lane. The most frequent alternative suggestion was traffic signals or a roundabout at this junction.
- 5.4.16 Church Street closure – Of those making comment on the closure there was a slight majority in favour of providing a closure (14 comments) when compared to the proposal for it to remain open but to monitor its usage (6 comments).
- 5.4.17 Green Lane East/Broad Lane closure – Of those making comment on the closure there was a slight majority in favour of keeping this road open (12 comments) when compared to the proposal for a closure (7 comments).
- 5.4.18 Need more NMU facilities – 33 comments were made that more NMU facilities should be provided as part of the NDR proposals, with some suggesting specific locations where facilities could be provided.
- 5.4.19 NDR represents a barrier to NMUs – 22 comments expressed concern that the NDR would present a barrier to NMU movements. Between St Faiths

Lane/Quaker Lane, Bullock Hill/Petans and at Smee Lane were the main areas of concern. Requests for bridges or underpasses here were made.

5.4.20 NDR will affect the landscape – Of the comments regarding landscaping there was a general concern regarding the effects of the NDR (190 comments) on the landscape and a request for more planting. Specific areas of concern were at Rackheath, including the embankment areas where the NDR rises to cross Plumstead Road and the Norwich to Sheringham railway line. 6 further responses suggested changes to the types of planting.

5.4.21 NDR will affect wildlife – There was general comment expressing concern that the NDR would affect wildlife and its habitats (11 comments) or would create a barrier to wildlife (6 comments).

5.4.22 Concern about noise and pollution – Of the comments regarding noise and pollution was a general concern regarding the affects of the NDR (178 comments), including the suggested increase in CO2 that could occur. Specific areas of concern were at Thorpe, Rackheath, Spixworth and Thorpe Marriott.

5.4.23 NDR affects specific roads – There were 155 comments on the effects of the NDR on specific roads. The routes between the A1067 at Taverham/Drayton and the A47 at Costessey/Easton were the most frequently identified areas where concern was expressed. Secondary areas were Plumstead Road through Thorpe End, Holt Road through Horsford and radial routes such as Reepham Road and Wroxham Road.

5.4.24 Loss of agricultural Land - There was comment (22 comments) expressing concern that the NDR would result in the loss of agricultural land and also concern about the effects to specific property (14 comments).

5.5 Section 47 and 48 Consultations - Refinements Made to Proposals

5.5.1 The majority of the Section 47 and Section 48 comments are similar to those received during previous consultations. A number of these have been

previously considered and the proposals amended prior to the pre-application consultations.

- 5.5.2 Having given regard to the responses resulting from the Section 47 and Section 48 consultations the applicant's refinements to the proposals are detailed in Appendix V of this report. Locations of these can be seen on the General Arrangement Drawing Sheets 1 to 12, Drawing No's R1C093-R1-5015 to 5026 (Application Document No 2.6).

Change Ref	Chainage	General Arrangement Sheet No.	Location	Change	Reason for change
4.11	Off Line	No 4	Holt Road/Drayton Lane Roundabout.	The roundabout was moved within the DCO boundary limits to avoid impact on residual property.	As a result of verbal comments received at exhibition (Section 47 and Section 48 consultations).
8.5	12500 to 13700	No 8	South side of NDR	Additional landscaping and woodland creation added.	As a result of Section 47 and Section 48 consultations. Also see: <ul style="list-style-type: none"> • Response Ref LA005 and LA009 in Appendix T of this report; • Response Ref IT001 in Appendix U of this report.
9.2	13800 to 14200	No 9	North of NDR - bunding south of The Springs Lake	New woodland added instead of grass planting.	As a result of Section 47 and Section 48 consultations. Also see: <ul style="list-style-type: none"> • Ref LA005 and LA009 in Appendix T of this report; • Ref IT023 and IT030 in Appendix U of this report.
9.6	14500 to 14950	No 9	North side of NDR - area around Lagoon 18 and 18B.	New hedgerow added north side of grassland creation to provide greater	As a result of Section 47 and Section 48 consultations.

6 Section 42 Consultation Responses

6.1 Section 42 Consultations - Introduction

6.1.1 This chapter explains the analysis of the responses received from the consultations undertaken under Section 42 of the Planning Act 2008. Summaries of each response to this consultation are contained in Appendix T and U of this report.

6.1.2 Responses to the consultation could be made by:

- (a) e-mailing norwich.transport@norfolk.gov.uk;
- (b) letter posted to Norwich Northern Distributor Road, Norfolk County Council, Department of Environment, Transport and Development, County Hall, Martineau Lane, Norwich, NR1 2DH.

6.1.3 Irrespective of the method of response, each comment was logged and analysed using the same process. Responses have been initially divided into the following main response topics:

- (a) responses from local authorities;
- (b) responses from prescribed consultees;
- (c) responses from those with interest in land (as defined under Section 44 of the Planning Act 2008).

6.2 Section 42 Consultations - Summary of Responses

6.2.1 The table below summaries the number of Section 42 consultation responses received.

Consultee	Documents Issued	Number of responses
Local Authorities	12	9
Prescribed Statutory Consultees	124	38
Those with Interest in Land (as defined under Section 44 of the Planning Act 2008)	1164	56

Total	1210	103
-------	------	-----

Table 6/1: Summary of Section 42 Responses

6.3 Section 42 Consultations – Key Issues from Local Authorities

6.3.1 Responses were received from the following local authorities:

- Norfolk County Council (Ref LA001);
- Cambridgeshire County Council (Ref LA002);
- Suffolk County Council (Ref LA003);
- Breckland District Council (Ref LA004);
- Broadland District Council (Ref LA005);
- Norwich City Council (Ref LA006);
- South Norfolk Council (Ref LA007)
- Waveney District Council (Ref LA008);
- Broads Authority (Ref LA009).

6.3.2 Details of the responses received from local authorities are contained in Appendix T of this report. The following tables provide a summary of their response grouped by the type of comments made and issues raised.

Issue	Consultation result
<u>Need for NDR</u>	<ul style="list-style-type: none"> • Norfolk County Council stated that it had no objections to raise to the NDR but requested that the Preliminary Environmental Information Report (PEIR) needs to reflect the comments received from the internal consultees within the Environment, Transport and Development Directorate. • Cambridgeshire County Council commented that the proposed project should greatly benefit the distribution of traffic around Norwich and bring environmental benefits within Norwich, although it will be too remote to have a material impact on Cambridgeshire interest. • Broadland District Council indicated strong support for the NDR as it is a pre-requisite for development of housing and employment to the north east of Norwich (as identified in the Joint Core Strategy (JCS)), and will enable significantly enhanced public transport, cycling and walking networks. • Norwich City Council stated it had no objections to the proposals subject to the delivery of a programme of measures identified within the Norwich Area Transportation Strategy. • South Norfolk Council commented that the NDR is an important piece of infrastructure to enable the scale of growth envisaged in the Joint Core Strategy to be delivered, and as such it is supported in principle. • The Broads Authority welcomed the route of the proposed Northern Distributor Road as improving access to the Broads and thereby benefitting the tourist economy of the Broads. • Suffolk County Council, Breckland District Council and Waveney District Council commented that they had no objection to the proposal or no comment to make.
<p>Regard Given to Response: These responses have been considered by the applicant and regard has been given to them in putting together the need case for the NDR, which is detailed in Volume 1 Chapter 3 of the Environmental Statement (Document Reference 6.1).</p> <p>Design Change: No</p>	

Table 6/2: Section 42 Consultations - Local Authority Need for NDR Responses

Issue	Consultation result
<p><u>Route of NDR</u> Link between the A1067 and A47 to the west of Norwich</p>	<ul style="list-style-type: none"> • South Norfolk Council encouraged the applicant to consider the benefits of completing the final ‘missing’ section of the NDR between the A1067 and A47(w) across the River Wensum at the earliest possible date.
<p>Regard Given to Response: A road linking the A1067 and the A47(w) would have to cross the Wensum Valley, which is designated a Special Area of Conservation (SAC) under the European Directive on the Conservation of Natural Habitats and of Wild Fauna and Flora - often referred to as the Habitats Directive. An assessment of options across the Wensum Valley concluded, in 2005, that significant impacts on the SAC would be likely, and there was doubt as to whether, under the terms of the Habitats Directive, it would be possible to design an acceptable scheme. This in turn raised the prospect that consent for a wider scheme including such a link might not be granted. On 19 September 2005, the applicant’s Cabinet resolved to have no NDR link between the A47(w) and the A1067. It therefore did not form part of the adopted route.</p> <p>At its meeting of 16 September 2013 the meeting of the Norfolk County Council resolved to recommend to Cabinet that they submit an application for a DCO in respect of the NDR as proposed (i.e. between the A47 at Postwick and the A1067 near Attlebridge) and to also commission a report on a feasibility study of providing a link across the Wensum Valley from the A1067 to the A47(w). Whilst at its meeting of 7 October 2013 the applicant’s Cabinet resolved that a “scoping report on the feasibility of providing a link across the Wensum Valley from the A1067 – A47 be written once consultation work was completed”, this study has not been carried out and there is therefore currently no proposal establishing the form any link between the A1067 and A47(w) would take, or indeed whether any such link is feasible. The Transport Assessment for the NDR (Document Ref 5.5.) shows that the NDR can provide substantial benefits without a further link between the A1067 and A47(w) and that the NDR will reduce daily traffic on existing routes between the A1067 and the A47(w) between Drayton/Taverham and Costessey. The feasibility and environmental acceptability of a link to the A47(w) have not been established and the previous assessment in 2005 discarded this option. Accordingly, it is the position of the applicant that the NDR can and should be considered on its own merits without such a link.</p> <p>Design Change: No</p>	

Table 6/3: Section 42 Consultations - Local Authority Route of NDR Responses

Issue	Consultation result
<u>On-Line Proposals</u> Fir Covert Road Roundabout	<ul style="list-style-type: none"> Broadland District Council welcomed the reinstatement of the Fir Covert Road Roundabout as this will ensure the continued access to the successful business community along it.
Regard Given to Response: Comment noted. Design Change: No	

Table 6/4: Section 42 Consultations - Local Authority On-Line Proposals Responses

Issue	Consultation result
<p><u>Walking/Cycling/Horse Riding Proposals</u> The NDR represents a barrier to NMUs</p>	<ul style="list-style-type: none"> Norwich City Council requested that the proposals ensure that the NDR enhances the potential for walking, cycling and public transport use between the expanding communities to the north and east of the city to ensure that any potential severance effects are fully mitigated.
<p>Regard Given to Response: During the April/May/June 2012 public consultations the applicant had various requests for improved walking and cycling facilities. As a result a strategy was developed to consider and prioritise these consultation requests. The strategy, published as part of the February/March 2013 public consultations, identified a network of routes to link areas that generate NMUs (such as villages, employment areas, future development) with each other, the Norwich Cycle Network and the Marriotts Way. Part of these routes utilised narrow country lanes, roads closed to motor vehicles and existing public rights of way. The applicant has prioritised NMU improvements on this network, and these improvements have included new NMU facilities as part of the proposals.</p> <p>Design Change: No</p>	

Table 6/5: Section 42 Consultations - Local Authority Walking/Cycling Horse Riding Responses

Issue	Consultation result
<p><u>Landscaping/Planting Issues</u> Landscaping proposals in area of Beeston St Andrew/Rackheath Park and further afield</p>	<ul style="list-style-type: none"> • Broadland District Council requested effective landscaping along the southern edge of the NDR in the area of Beeston St Andrew and Rackheath Park which maintains a sense of definition to these parkland areas. • The Broads Authority noted the potential for significant indirect impact on the Broads and requested that the green infrastructure and landscaping be strengthened and enhanced biodiversity measures incorporated.
<p>Regard Given to Response: Landscaping has been carefully designed, particularly in sensitive areas such as Beeston Park and Rackheath Park. There has been a degree of collaboration with ecologists representing the Beyond Green development, to ensure a coherent, functioning landscape-wide mitigation plan. However it is recognised that there is a need to provide further landscaping and biodiversity features in and around Beeston Park and Rackheath. As such, further planting and landscaping to screen the NDR and promote further diversification of biodiversity has been incorporated into the landscaping proposals.</p> <p>Design Change: Yes – additional landscaping has been added to the proposals in the area around Beeston Park, Rackheath Park and The Springs. See Design Change Refs: 8.5 and 9.2 in Appendix V to this report.</p>	

Table 6/6: Section 42 Consultations - Local Authority Landscaping/Planting Issues Responses

Issue	Consultation result
<u>Specific Road Effects</u> NDR affects on routes between the A1067 and A47(W)	<ul style="list-style-type: none"> South Norfolk Council urged the applicant to include adequate and appropriate mitigation measures to address the impacts the NDR will have on the roads connecting the A1067 to the A47 at Longwater/Easton (roads such as West End and Longwater Lane, for example). It would be happy to discuss any proposal, in particular, the imposition of average speed cameras along West End and Longwater Lane.
<p>Regard Given to Response: Traffic flows are generally predicted to decrease on these roads with an NDR. Refer to the Traffic Forecasting Report, Appendix I (Document Ref 5.6) for forecast traffic flows.</p> <p>Design Change: No</p>	

Table 6/7: Section 42 Consultations - Local Authority Effects on Specific Roads Responses

Issue	Consultation result
<u>Consultation/Exhibitions</u> Adequacy of Consultation	<ul style="list-style-type: none"> • Broadland District Council noted the consultation work that has been done to date, considering it to have been appropriate and well run in accordance with the Statement of Community Consultation. • South Norfolk Council noted that the information in the supporting documentation appeared generally adequate in enabling an accurate assessment of the likely environmental impacts of the NDR to be made.
<p>Response: Comments noted.</p> <p>Design Change: No</p>	

Table 6/8: Section 42 Consultations - Local Authority Consultations/Exhibition Responses

Issue	Consultation result
<u>Other Comments</u> NDR and NATS	<ul style="list-style-type: none"> • Norwich City Council requested that the applicant supports the application for the NDR by demonstrating its place within the overall NATS Strategy and giving a commitment to deliver the whole of the NATS implementation Programme by 2026.
<p>Response: The NDR is a key element of NATS. The applicant has an implementation plan for NATS, developed following consultations in 2009, which outlines the programme of proposed measures.</p> <p>Design Change: No</p>	

Table 6/9: Section 42 Consultations - Local Authority Other Responses

6.4 Section 42 Consultations – Key Issues from Prescribed Consultees

6.4.1 Responses were received from the following prescribed statutory consultees:

- Anglian Water (Ref: PC001);
- Canal Trust (Ref: PC002);
- Civil Aviation Authority (Ref: PC003);
- Energetics Electricity Limited (Ref: PC004);
- English Heritage (Ref PC005);
- Environment Agency (Ref PC PC006);
- Fisher German Pipelines (Ref PC007);
- Health and Safety Executive (Ref PC008);
- Highways Agency (Ref PC009);
- KLM Engineering (Ref PC 010);
- MOD - Defence Infrastructure Organisation (Ref PC011);
- Natural England (Ref PC012);
- New Anglia Local Enterprise Partnership (Ref PC013);
- Norfolk Constabulary (Ref PC014);
- Norfolk NHS Primary Care Trust (Ref PC015);
- North Norfolk Clinical Commissioning Group (Ref PC016);
- Norwich International Airport (Ref PC017);
- Police and Crime Commissioner (Ref PC 018);
- Public Health England (Ref PC019);
- Bawburgh Parish Council (Ref PC020);
- Blofield Parish Council (Ref PC021);
- Caister St Edmund Parish Council (Ref PC022);
- Colney Parish Council (Ref PC023);
- Felthorpe Parish Council (Ref PC024);
- Gt and Lt Plumstead Parish Council (Ref PC025);
- Hainford Parish Council (Ref PC026);
- Hellesdon Parish Council (Ref PC027);
- Horsford Parish Council (Ref PC028);
- Horsham and Newton St Faiths Parish Council (Ref PC029);
- Norton Sub Course Parish Council (Ref PC030);
- Rackheath Parish Council (Ref PC031);
- Salhouse Parish Council (Ref PC032);
- Spixworth Parish Council (Ref PC033);
- Sprowston Town Council (Ref PC034);
- Swannington Parish Council (Ref PC035);
- Wroxham Parish Council (Ref PC036)
- Greater Anglia (Ref PC036)
- Fulcrum Pipelines (Ref PC037)
- NATS En-Route (NERL) Safeguarding (Ref PC038)

6.4.2 Details of the responses received from prescribed statutory consultees are contained in Appendix T of this report. The following tables provide a summary of their responses grouped by the type of comments made and the issues raised.

Issue	Consultation result
<p><u>Need for NDR</u> Need for NDR</p>	<ul style="list-style-type: none"> • Highways Agency, New Anglia Local Enterprise Partnership, North Norfolk Clinical Commissioning Group, the Police and Crime Commissioner and Spixworth Parish Council expressed support for the scheme or noted benefits it would bring. The reasons given included: <ul style="list-style-type: none"> ⇒ it will assist in bringing forward anticipated growth in both housing and jobs in areas both in and around Norwich; ⇒ a successful economy requires an efficient transport system; ⇒ it will address the existing transport problems in northern Norwich; ⇒ the existing links to the airport and tourist areas to the north are inadequate. • Colney Parish Council, Gt and Lt Plumstead Parish Council, Rackheath Parish Council, Salhouse Parish Council, Swannington Parish Council and Wroxham Parish Council questioned the need for the NDR. The reasons given included: <ul style="list-style-type: none"> ⇒ the cost of the road, when local councils already face a shortfall in their budgets and the money could be better spent on other services; ⇒ the evidence does not support the case that the NDR is needed to create space for sustainable transport measures in Norwich; ⇒ the NDR will have little benefit in reducing traffic in the city and the Outer Ring Road; ⇒ it is wrong that the NDR has been inextricably linked to planned development; ⇒ the alleged generation of CO2 emissions per year by the NDR and the adverse effects to landscape/wildlife.
<p>Regard Given to Response: These responses have been considered by the applicant and regard has been given to them in putting together the need case for the NDR, which is detailed in Volume 1 Chapter 3 of the Environmental Statement (Document Reference 6.1).</p>	

Design Change: No

Table 6/10: Section 42 Consultations - Prescribed Consultee Need for NDR Responses

Issue	Consultation result
<p><u>Alternatives to NDR</u> Other alternatives not tested</p>	<ul style="list-style-type: none"> • Gt and Lt Plumstead Parish Council and Rackheath Parish Council commented that the NDR has not been tested against alternative routes and alternative transport strategies such as improved public transport, including light railway. Gt and Lt Plumstead Parish Council considered that the plan for the three quarter NDR route has never been properly tested against alternatives. • Rackheath Parish Council suggested that the money would be better spent on improving public transport and introducing free transport for children.
<p>Regard Given to Response: These responses have been considered by the applicant and regard has been given to them in putting together the assessment of alternatives, which is detailed in Volume 1 Chapter 3 of the Environmental Statement (Document Reference 6.1).</p> <p>Design Change: No</p>	

Table 6/11: Section 42 Consultations - Prescribed Consultee Alternatives to NDR Responses

Issue	Consultation result
<p><u>Route of NDR</u> Link between the A1067 and A47(w) of Norwich</p>	<ul style="list-style-type: none"> • North Norfolk Clinical Commissioning Group, Police and Crime Commissioner, Bawburgh Parish Council, Hellesdon Parish Council, Horsham and Newton St Faith Parish Council, Norton Subcourse Parish Council, Salhouse Parish Council and Swannington Parish Council commented that the NDR should link with the A47 to the west of Norwich, otherwise the benefits of the NDR are diminished. • The Environment Agency noted that Norfolk County Council had announced that it is commissioning a feasibility study for the section of the NDR, which would cross over the River Wensum SAC. It suggests that due consideration is given as to how this affects the current assessment of impacts that the Council is undertaking in relation to the present scheme.
<p>Regard Given to Response: A road linking the A1067 and the A47(w) would have to cross the Wensum Valley, which is designated a Special Area of Conservation (SAC) under the European Directive on the Conservation of Natural Habitats and of Wild Fauna and Flora - often referred to as the Habitats Directive. An assessment of options across the Wensum Valley concluded, in 2005, that significant impacts on the SAC would be likely, and there was doubt as to whether, under the terms of the Habitats Directive, it would be possible to design an acceptable scheme. This in turn raised the prospect that consent for a wider scheme including such a link might not be granted. On 19 September 2005, the applicant’s Cabinet resolved to have no NDR link between the A47(w) and the A1067. It therefore did not form part of the adopted route.</p> <p>At its meeting of 16 September 2013 the meeting of the Norfolk County Council resolved to recommend to Cabinet that they submit an application for a DCO in respect of the NDR as proposed (i.e. between the A47 at Postwick and the A1067 near Attlebridge) and to also commission a report on a feasibility study of providing a link across the Wensum Valley from the A1067 to the A47(w). Whilst at its meeting of 7 October 2013 the applicant’s Cabinet resolved that a “scoping report on the feasibility of providing a link across the Wensum Valley from the A1067 – A47 be written once consultation work was completed”, this study has not been carried out and there is therefore currently no proposal establishing the form any link between the A1067 and A47(w) would take, or indeed whether any such link is feasible. The Transport Assessment for the NDR (Document Ref 5.5.) shows that the NDR can</p>	

provide substantial benefits without a further link between the A1067 and A47(w) and that the NDR will reduce daily traffic on existing routes between the A1067 and the A47(w) between Drayton/Taverham and Costessey. The feasibility and environmental acceptability of a link to the A47(w) have not been established and the previous assessment in 2005 discarded this option. Accordingly, it is the position of the applicant that the NDR can and should be considered on its own merits without such a link.

Design Change: No

Issue	Consultation result
<p><u>Route of NDR</u> Suggested alternative routes for the NDR</p>	<ul style="list-style-type: none"> • Gt and Lt Plumstead Parish Council, Rackheath Parish Council and Salhouse Parish Council suggested that the route of the NDR should be closer to the city, forming an inner orbital link road. The reasons for this include: <ul style="list-style-type: none"> ⇒ it would link the proposed development areas; ⇒ it could be delivered in a more cost effective and timely manner; ⇒ it is less environmentally damaging.

Regard Given to Response: The alternative of an inner orbital link road using routes through proposed development is considered as Alternative No 5 in the need and alternatives case. See Volume 1 Chapter 3 of the Environmental Statement (Document Reference 6.1).

Design Change: No

Table 6/12: Section 42 Consultations - Prescribed Consultee Route of NDR Responses

Issue	Consultation result
<u>On-Line Proposals</u> Dualling of the NDR between Fir Covert Road and Fakenham Road.	<ul style="list-style-type: none"> Felthorpe Parish Council and Hellesdon Parish Council supported dualling of the NDR between Fir Covert Road and Fakenham Road.
<p>Regard Given to Response: Comments noted. Design Change: No</p>	
Issue	Consultation result
<u>On-Line Proposals</u> Drainage proposals	<ul style="list-style-type: none"> The Environment Agency accepted in principle the drainage proposals for the majority of the scheme and that suitable drainage methods are proposed to prevent adverse impacts to the likely affected surface water bodies. It also provided other comments on drainage that included: <ul style="list-style-type: none"> ⇒ it should be ensured that the culverts are designed to contain the 1% chance (1 in 100) flow; ⇒ as ditches are going to be used to allow overland flows to infiltrate rather than pass underneath the road it should be ensured that they will also be sized to contain this 1% chance event. Norwich International Airport expressed concern that the planned drainage lagoons and temporary topsoil storage areas are potential bird attractants. It requested that the applicant, in consultation with Norwich International Airport develop a Bird Control Management Plan (BCMP) the aim of which would be to deter birds from flying in the vicinity of the airport.
<p>Regard Given to Response: Through continued correspondence the Environment Agency previously advised that in accordance with BRE365 a minimum infiltration rate in the area of the lagoons was used rather than an average. It also advised that lagoons with longer drain down times exceeding 7 days should be able to accommodate a 1 in 100 follow on storm.</p>	

<p>Design Change: Yes – changes to lagoon size and position have been made as a result of on-going discussions with the Environment Agency. See Appendix V of this report.</p> <p>The assessment of the bird strike hazard was undertaken for the scheme. Following the risk assessment and recommendations of specialists, the NDR was developed to eliminate any source of bird attracting features and activity on or in the vicinity (13km) of the airport.</p> <p>The landscaping has been designed to minimise nesting activity near the airport.</p> <p>Design Change: Yes – an additional area of grassland creation has been incorporated into the proposals to prevent issues arising from bird and wildlife management concerns. See Design Change Ref: 6.6 in Appendix V of this report.</p>	
<p><u>On-Line Proposals</u> Postwick Hub Junction</p>	<ul style="list-style-type: none"> Salhouse Parish Council commented that the Postwick Hub Junction is over complicated and the extra mileage will actually deter traffic from using the NDR with drivers seeking alternative routes through Gt Plumstead and Salhouse.
<p>Regard Given to Response: During design development a number of significant engineering constraints have influenced the scheme design. These include the River Yare/Railway Bridge, the existing Postwick Bridge, a high pressure gas main and the nearby property settlements at Heath Farm and Postwick village. Given the constraints and having assessed a number of options it was concluded that, if the existing capacity problems are to be addressed and the committed development at Broadland Gate Business Park is to be accommodated, then removal of the existing eastbound diverge slip road and the provision of a new diverge slip road running parallel with the existing A47, is the only feasible solution.</p> <p>Due to the configuration requirements to accommodate a new eastbound diverge slip road, a new separate Postwick bridge crossing the A47 provides a connection between the Postwick North East Roundabout and the Park and Ride Junction.</p> <p>Design Change: No</p>	
Issue	Consultation result
<p><u>On-Line Proposals</u> Fir Covert Road</p>	Felthorpe Parish Council and Hellesdon Parish Council supported the re-introduction of the Fir Covert Road

Roundabout	roundabout at its junction with the NDR.
<p>Regard Given to Response: Comments noted. Design Change: No</p>	
Issue	Consultation result
<p><u>On-Line Proposals</u> Plumstead Road and the Norwich to Sheringham Railway Line Bridge</p>	<ul style="list-style-type: none"> Salhouse Parish Council expressed concern regarding the elevated section of the NDR as it crosses Plumstead Road and the Norwich to Sheringham railway line, which will cause significant visual intrusion. It was suggested that the NDR should pass underneath Plumstead Road and the railway line.
<p>Regard Given to Response: The applicant has previously examined routeing the NDR below Plumstead Road and the railway line and it is technically difficult due to groundwater conditions. There would be a high risk of flooding of any tunnel and a need for a permanent pumping system. This would have resulted in high maintenance costs. Design Change: No</p>	
Issue	Consultation result
<p><u>On-Line Proposals</u> Number of roundabouts on NDR</p>	<ul style="list-style-type: none"> Wroxham Parish Council commented on the number of roundabouts proposed over the length of the NDR, which it considers will create a slow moving traffic jam during busy periods. Of particular concern is the A1151 junction with the NDR, and it suggested that a grade separated junction should be provided here.
<p>Regard Given to Response: The NDR is a distributor road and not a bypass and so not many users are expected to drive from one end to the other. In view of this the delay at the roundabouts is not expected to be a deterrent to the use of the route. Grade separated junctions would have a much greater environmental impact and be more difficult to justify. The A1151 Wroxham Road</p>	

junction operates below its theoretical capacity for the predicted traffic levels. Whilst it exceeds its desirable capacity in 2032 the delay is considered reasonable and the queues can be accommodated safely. See Chapter 8 of the Transport Assessment (Document Ref 5.5).

Design Change: No

Table 6/13: Section 42 Consultations - Prescribed Consultee On-Line Proposals Responses

The Issue	Consultation result
<u>Off-Line Proposals</u> Number of roads closures	<ul style="list-style-type: none"> • Rackheath Parish Council commented that the road closures will create problems in many parishes leading to longer journeys and increased congestion. • Salhouse Parish Council does not support local arguments in favour of the closure of local roads. It considered that these roads should remain open to allow use by slow moving agricultural vehicles as an alternative to the NDR.
<p>Regard Given to Response: The applicant has tried to keep the number of road closures to a minimum and they are generally only provided for reasons of highway safety where minor roads are severed by the NDR or to encourage traffic to use more appropriate routes.</p> <p>Design Change: No</p>	
Issue	Consultation result
<u>Off-Line Proposals</u> North Walsham Road/Crostwick Lane proposals	<ul style="list-style-type: none"> • Spixworth Parish Council, by a narrow majority, voted to support the proposals at this junction. However, another junction layout was put forward which the councillors felt had some merit.
<p>Regard Given to Response: The alternative suggested involves diverting the Rackheath Lane arm of the junction so that it joins North Walsham Road to the south of Crostwick Lane (thereby reversing the stagger of the side road arms of this junction) and restricting traffic exiting Rackheath Lane to left turn only.</p> <p>This alternative has been considered and is not appropriate for the following reasons:</p> <ul style="list-style-type: none"> • it is unlikely that physical measures alone could prevent the right turn out of Rackheath Lane making the restriction difficult to enforce; • the additional distance to travel to the North Walsham Road Roundabout and back could encourage vehicles to turn right out of 	

<p>Rackheath Lane thereby introducing an illegal movement and additional vehicles at the junction;</p> <ul style="list-style-type: none"> vehicles from Crostwick Lane wishing to access Rackheath Lane would have a difficult manoeuvre to make unless the left turn into Rackheath Lane from North Walsham Road was also restricted; it does not fulfil the objective to simplify the junction. <p>Design Change: No</p>	
Issue	Consultation result
<p><u>Off-Line Proposals</u> Closure of Green Lane East/Broad Lane at its junction with Plumstead Road</p>	<ul style="list-style-type: none"> Rackheath Parish Council commented that the proposals will cut the parish off from the Plumstead area, resulting in vehicles having to take a detour via the NDR. As a result they do not support the closing off of roads to through traffic, particularly the closure of Green Lane East/Broad Lane at its junction with Plumstead Road.
<p>Regard Given to Response: Whilst the comments are noted, the reasons for closure of Green Lane East/Broad Lane at its junction with Plumstead Road are primarily to improve highway safety at this junction. The closure of Green Lane East/Broad Lane at its junction with Plumstead Road will remove the existing crossroads junction making it a more conventional and safer T-junction.</p> <p>Design Change: No</p>	

Table 6/14: Section 42 Consultations - Prescribed Consultee Off-Line Proposals Responses

Issue	Consultation result
<p><u>Walking/Cycling/Horse Riding Issues</u> The NDR represents a barrier to NMUs</p>	<ul style="list-style-type: none"> • Horsham and Newton St Faiths Parish Council objected to the plans for an at-grade informal crossing of the NDR between Bullock Hill and Petans. It commented that having a crossing with no traffic lights would be highly dangerous and completely inappropriate. It suggested an underpass at this location. • Salhouse Parish Council expressed concern that the roundabouts on Salhouse Road and other radial routes will be impossible to cross by walkers, cyclists and horse riders. It requested better provision is made to cross the NDR.
<p>Regard Given to Response: During the April/May/June 2012 public consultations the applicant had various requests for improved walking and cycling facilities. As a result a strategy was developed to consider and prioritise these consultation requests. The strategy published as part of the February/March 2013 public consultations identified a network of routes to link areas that generate NMUs (such as villages, employment areas, future development) with each other, the Norwich Cycle Network and the Marriotts Way. Part of these routes utilised narrow country lanes, roads closed to motor vehicles and existing public rights of way. The applicant has prioritised NMU improvements on this network, and these improvements have included new NMU facilities as part of the proposals</p> <p>It is proposed to maintain connectivity between Bullock Hill and Petans with the provision of a segregated shared use footway/cycleway around the perimeter of the junction with uncontrolled crossing points. This is considered appropriate provision to cater for the anticipated level of usage.</p> <p>Design Change: No</p>	

Table 6/15: Section 42 Consultations - Prescribed Consultee Walking/Cycling Horse Riding Responses

Issue	Consultation result
<p><u>Landscaping/Planting Issues</u> Effects of NDR on landscape and type of planting</p>	<ul style="list-style-type: none"> Horsham and Newton St Faiths Parish Council objected to the proposed plans due to the loss of areas of countryside and that the NDR will lead the way for increased development that will encroach on the village.
<p>Regard Given to Response: The strategy for the scale and location of development is determined through the development plan process, in this case the Joint Core Strategy for Broadland, Norwich and South Norfolk. Individual sites for growth are set out in more detailed local plan documents that are currently in production and have been subject to consultation. The JCS is supported by evidence and has been the subject of statutory consultation and public examination by the independent Planning Inspectorate. Individual applications for development in villages as elsewhere will be determined by the district councils in accordance with the plan unless there are material considerations that indicate otherwise.</p> <p>Design Change: No</p>	

Table 6/16: Section 42 Consultations - Prescribed Consultee Landscaping/Planting Responses

Issue	Consultation result
<p><u>Wildlife Effects</u> Rackheath Park and The Springs</p>	<ul style="list-style-type: none"> • The Environment Agency commented that it will be essential to ensure that deterioration in water quality and habitat does not occur as a result of the proposed scheme, in particular the tributaries of the Bure (Spixworth and Dobbs Beck) and the Wensum are particularly sensitive to deterioration in water quality. In addition the quality of water discharged to The Springs should be at least as good as the known existing water quality. • Salhouse Parish Council expressed concern regarding effects to the historic Rackheath Park, the wet land habitat of Dobb's Beck, The Springs to the north west of the A1151, and the area around Beeston St Andrew. It commented on concerns that the NDR will cause increased surface drainage runoff into local water courses and that it will contain pollutants from the road.
<p>Regard Given to Response: The Environment Agency and Natural England have been consulted on the habitat and water quality of these areas. Measures have been incorporated into the scheme design to mitigate for any impacts. A Habitats Regulations Assessment has been undertaken to ensure there are no impacts on the Wensum. There are no anticipated impacts on Spixworth and Dobbs Beck.</p> <p>Design Change: No</p>	

Table 6/17: Section 42 Consultations - Prescribed Consultee Wildlife Responses

Issue	Consultation result
<p><u>Emission/Noise Issues</u> Concern over noise/emissions</p>	<ul style="list-style-type: none"> • Natural England commented that the proposals for the road need to clearly demonstrate how climate change over the longer term has been taken into account, including flood risk, increased runoff and changes to biodiversity and landscape. • Public Health England noted that the NDR is likely to cause a deterioration of air quality at certain locations, and requests the applicant clearly identifies the locations and number of households affected. • Horsham and Newton St Faiths Parish Council commented on concerns regarding the impact of the increased noise and pollution on the village. • Gt and Lt Plumstead Parish Council commented that the road would generate 25,000 extra tonnes of CO2 emissions per year, which is not consistent with national government policies.
<p>Regard Given to Response: Noise and Air Quality assessments are included within Volume 1 Chapters 4 and 11 of the Environmental Statement (Document Reference 6.1).</p> <p>Carbon emissions is one of the topics considered in the Environmental Impact Assessment (EIA) process. These assessments are included in Volume 1 Chapter 5 of the Environmental Statement (Document Ref 6.1). The assessment shows a slight increase in carbon emissions with the NDR, but this needs to be considered within the wider context of NATS which will enable other sustainable travel modes to be introduced.</p> <p>These responses have informed the assessments of these environmental topics.</p> <p>Design Change: No</p>	

Table 6/18: Section 42 Consultations - Prescribed Consultee Emission/Noise Responses

Issue	Consultation result
<u>Specific Road Effects</u> NDR affects on Plumstead Road	<ul style="list-style-type: none"> Gt and Lt Plumstead Parish Council commented that the route cuts the parish in two and has proposed closures of Smee Lane and Low Road. It considered that this and the proposed increase in housing in the North East Triangle will funnel traffic along Plumstead Road and cause a projected traffic increase of 100% on a very busy C class road.
<p>Regard Given to Response: One of the reasons for introducing a bridge over the NDR at Middle Road was to improve access options to Gt and Lt Plumstead and help mitigate concerns that the NDR cut the parish in two. The bridge was located here, rather than at Low Road or Smee Lane, because Middle Road was considered the better standard road.</p> <p>Design Change: No</p>	
<u>Specific Road Effects</u> NDR affects on routes between the A1067 and A47(w)	<ul style="list-style-type: none"> Swannington Parish Council commented that the proposed NDR will cause huge congestion and rat runs through small parishes and villages, particularly Swannington, Attlebridge, Taverham, Ringland and Costessey.
<p>Regard Given to Response: From the traffic modelling work that has been carried out, over time traffic levels are likely to increase over River Wensum. However, the traffic modelling shows that these flows are about the same or slightly less with the NDR in place compared to the scenario without the NDR, that is to say, the NDR doesn't encourage additional trips between Taverham and Costessey on these routes. Refer to the Traffic Forecasting Report, Appendix I (Document Ref 5.6) for forecast traffic flows.</p> <p>Design Change: No</p>	

<p><u>Specific Road Effects</u> NDR affects A1151 and B1140</p>	<ul style="list-style-type: none"> Salhouse Parish Council and Wroxham Parish Council commented on the predicted increase in traffic along the A1151 which would result in further tailbacks and delays on an already popular and crowded tourist route. Salhouse Parish Council suggested that this would increase traffic on the B1140 through the village. Wroxham Parish Council commented that a steady flow of traffic on the A1151 cannot be maintained when crossed by the two lane dual carriageway (NDR). It suggested a bridge arrangement for the A1151 to pass either over or under the NDR.
<p>Regard Given to Response: Traffic flows are predicted to increase on Wroxham Road close to the NDR and this is to be expected as it reflects traffic using Wroxham Road to access the NDR. See Appendix I to the Forecasting Report (Document Reference 5.6) for actual traffic flows.</p> <p>Traffic flows are predicted to increase on Salhouse Road north and south of the NDR and this is to be expected as it reflects traffic using it to access the NDR. However, on Salhouse Road in the built up area traffic flows are predicted to decrease. This reflects traffic wishing to access external destinations changing behaviour by travelling out to the NDR rather than travelling through the built up area. Refer to the Traffic Forecasting Report, Appendix I (Document Ref 5.6) for forecast traffic flows.</p> <p>Design Change: No</p>	

Table 6/19: Section 42 Consultations - Prescribed Consultee Effects on Specific Roads Responses

Issue	Consultation result
<u>Land/ Property issues</u> Airport issues	<ul style="list-style-type: none"> KLM Engineering commented that it is inappropriate that part of the current airfield will be removed from the airport to use for part of an alternative infrastructure project. It believes it is short term thinking to reduce the size of the airfield.
<p>Regard Given to Response: The future development proposals of the airport are not a matter for this application. In any event, the applicant has held discussions with Norwich International Airport, who are content with the NDR alignment around the north of airport.</p> <p>Design Change: No</p>	
<u>Land/ Property Issues</u> Loss of agricultural land and	<ul style="list-style-type: none"> Colney Parish Council expressed concern at the loss of productive agricultural land that will be permanently lost and the adverse affect to the landscape as a result of the NDR.
<p>Regard Given to Response: The loss of productive agricultural land and commitments regarding the minimisation of impacts to soils are detailed in Volume 1 Chapter 13 and Volume 1 Chapter 9 of the Environmental Statement (Document Reference 6.1).</p> <p>Design Change: No</p>	

Table 6/20: Section 42 Consultations - Prescribed Consultee Land/Property Responses

Issue	Consultation result
<u>Suggested Changes</u> Remove HGVs from Salhouse	<ul style="list-style-type: none"> • Salhouse Parish Council commented that the B1140 through Salhouse is a designated sugar beet route and requested that with the NDR in place, HGV traffic should be taken away from the B1140 through enforceable restrictions and signing. It also requested that the designated HGV route to Rackheath Industrial Estate and its associated restrictions be removed.
<p>Regard Given to Response: Norfolk County Council has a Route Hierarchy network which classifies roads according to their function and level of use. This was developed following assessments of roads and public consultations during the 1990s and early 2000s. Within this Route Hierarchy roads designated as a Main Distributor Route and classified a B road are identified as being a distributor of local through traffic. The applicant would not normally provide a weight restriction on such routes.</p> <p>Design Change: No</p>	

Table 6/21: Section 42 Consultations - Prescribed Consultee Suggested Changes Responses

Issue	Consultation result
<u>Consultation/Exhibitions</u> Previous route consultations	<ul style="list-style-type: none"> • Gt and Lt Plumstead Parish Council and Rackheath Parish Council commented that the NDR proposed in the 2003 consultations was for a full route between the A47 at Postwick and the A47 to west of Norwich and did not include the Postwick Hub Junction. It was suggested support for the NDR can only be based on the full route and there should be a consultation on the support for a road between the A47 and A1067. Suggestion was made that the originally proposed route options should be re-examined.
<p>Regard Given to Response: All consultations on the NDR since 2005 showed the NDR being proposed between the A47 at Postwick and the A1067 near Attlebridge including the more recent consultations in April/May/June 2012 (described in Section 3.3) and in February/March 2013 (described in Section 3.4). During these consultations there was the opportunity to comment on the route. In addition there has been opportunity to comment on the route as part of the statutory pre-application consultations.</p> <p>Design Change: No</p>	
<u>Consultation/Exhibitions</u> Pre-application consultation	<ul style="list-style-type: none"> • Colney Parish Council commented that the NDR consultation was not effective and omitted the necessary information for the wider community to make an informed decision. • Salhouse Parish Council commented that there was no public exhibition at Salhouse. • Rackheath Parish Council commented that some letters to Rackheath residents were received on the day of the first exhibition, meaning that residents were unable to attend or had very little time to prepare for a consultation there.
<p>Regard Given to Response: The consultation pack consisted of a cover letter, scheme information document, non-technical summary to the PEIR, a full copy of the PEIR, non-technical note on transport modelling and a CD containing these documents and appendices. This is considered a full pack of information to enable the consultees to provide informed responses on the NDR. The rationale for selection of exhibition venues is outlined in Section 4.4 of this report. Whilst Rackheath residents were able to attend any of the other exhibitions, in light of the comments the applicant decided to</p>	

schedule an additional exhibition on 12 August 2013 (between 13:00 to 20:00) at the Holy Trinity Church in Rackheath. Letters notifying people of this new exhibition were sent to addresses within Rackheath Parish (Appendix K-5 of this report).

Design Change: No

Table 6/22: Section 42 Consultations - Prescribed Consultee Consultations/Exhibition Responses

Issue	Consultation result
<u>Other comments</u> NDR and NATS	<ul style="list-style-type: none"> • New Anglia Local Enterprise Partnership commented that it is critical that the NDR is part of a wider package of public transport measures including improved bus services and an increase in cycling routes. • Gt and Lt Plumstead Parish Council commented on the Norwich Area Transportation Strategy (NATS) and considered that an NDR centred transport policy leads to greater vehicle use, longer journeys and increased congestion.
<p>Regard Given to Response: The NDR is a key element of NATS. The applicant has an implementation plan for NATS, developed following consultations in 2009, which outlines the programme of proposed measures.</p> <p>Design Change: No</p>	

Table 6/23: Section 42 Consultations - Prescribed Consultee Other Comments Responses

6.5 Section 42 – Key Issues from Those with Interest in Land

- 6.5.1 The consultation with those with interest in land (as defined in Section 44 of the Planning Act 2008) received 54 responses. A summary of these are contained in Appendix U of this report.
- 6.5.2 A majority of comments received related to requests for amendments to accommodation works. These included gating arrangements, boundary fencing and hedgerow detail, which will be considered during the detailed design and in discussion with land owners/tenants. The regard given to these responses is detailed in Appendix U of this report.
- 6.5.3 There were also responses relating to the specific effects of the proposals on individual land plots, including requests for additional landscaping and planting to provide protection adjacent to specific areas. Rather than document these specific issues in this section of the report, these comments and the regard given to them are also contained in Appendix U of this report.
- 6.5.4 The following tables provide a summary of the key issues identified by the consultation with those affected by land.

Issue	Consultation result
<u>Need for NDR</u>	<p>4 responses (IT008, IT035, IT038, IT039) questioned the need for the NDR. These included:</p> <ul style="list-style-type: none"> • the NDR will give license to commercial and domestic building, both of which will result in the loss of agricultural land; • the money could be better spent on improving public transport and cycle facilities; • the NDR will generate additional traffic which will cause environmental damage; • question why the NDR has to be key to the delivery of NATS.
<p>Regard Given to Response: These responses have been considered by the applicant and regard has been given to them in putting together the need case for the NDR, which is detailed in Volume 1 Chapter 3 of the Environmental Statement (Document Reference 6.1).</p> <p>Design Change: No</p>	

Table 6/24: Section 42 Consultations – Those with Interest in Land Need for NDR Responses

Issue	Consultation result
<p><u>Route of NDR</u> A link is needed between the A1067 and A47(w)</p>	<p>5 responses (IT010, IT012, IT013, IT018, IT036) suggested that the NDR should link to the A47 to the west of Norwich. Comments included:</p> <ul style="list-style-type: none"> • maximum benefit can only be achieved with this link; • providing this link would greatly benefit Taverham and Drayton.
<p>Regard Given to Response: A road linking the A1067 and the A47(w) would have to cross the Wensum Valley, which is designated a Special Area of Conservation (SAC) under the European Directive on the Conservation of Natural Habitats and of Wild Fauna and Flora - often referred to as the Habitats Directive. An assessment of options across the Wensum Valley concluded, in 2005, that significant impacts on the SAC would be likely, and there was doubt as to whether, under the terms of the Habitats Directive, it would be possible to design an acceptable scheme. This in turn raised the prospect that consent for a wider scheme including such a link might not be granted. On 19 September 2005, the applicant’s Cabinet resolved to have no NDR link between the A47(w) and the A1067. It therefore did not form part of the adopted route.</p> <p>At its meeting of 16 September 2013 the meeting of the Norfolk County Council resolved to recommend to Cabinet that they submit an application for a DCO in respect of the NDR as proposed (i.e. between the A47 at Postwick and the A1067 near Attlebridge) and to also commission a report on a feasibility study of providing a link across the Wensum Valley from the A1067 to the A47(w). Whilst at its meeting of 7 October 2013 the applicant’s Cabinet resolved that a “scoping report on the feasibility of providing a link across the Wensum Valley from the A1067 – A47 be written once consultation work was completed”, this study has not been carried out and there is therefore currently no proposal establishing the form any link between the A1067 and A47(w) would take, or indeed whether any such link is feasible. The Transport Assessment for the NDR (Document Ref 5.5.) shows that the NDR can provide substantial benefits without a further link between the A1067 and A47(w) and that the NDR will reduce daily traffic on existing routes between the A1067 and the A47(w) between Drayton/Taverham and Costessey. The feasibility and environmental acceptability of a link to the A47(w) have not been established and the previous assessment in 2005 discarded this option.</p>	

Accordingly, it is the position of the applicant that the NDR can and should be considered on its own merits without such a link.	
Design Change: No	
Issue	Consultation result
<u>Route of NDR</u> Alternative routes for the NDR	<p>3 responses (IT012, IT013, IT040) suggested that the NDR should stop at the A140 and/or beyond this to utilise existing roads. The reasons for this view included:</p> <ul style="list-style-type: none"> • areas of countryside should be protected; • the speed of traffic joining Fakenham Road would be excessive; • Reepham Road, between Hall Lane and Fir Covert Road, is a good quality road that could be used for an NDR; • the road would not go anywhere other than Fakenham Road and those wishing to access the A47 would use unsuitable routes between the A1067 and Taverham/Drayton and the A47 at Costessey/Easton.
<p>Regard Given to Response: The alternative of a dual carriageway NDR between the A47 at Postwick and the A140 Cromer Road is considered as Alternative No 2 in the needs and alternative case (Volume 1 Chapter 3 of the Environmental Statement (Document Ref 6.1)).</p> <p>The alternative of using Reepham Road, between Hall Lane and Fir Covert Road, as part of an NDR was one of the options considered in the Stage 1 Environmental Assessment undertaken prior to developing a manageable number of route alternatives to take forward to the 2003 public consultations. It was rejected at this stage as a result of this assessment.</p>	
Design Change: No	

Table 6/25: Section 42 Consultations – Those with Interest in Land Route of NDR Responses

Issue	Consultation result
<u>On-Line Proposals</u> Dual carriageway section of the NDR between Fir Covert Road and Fakenham Road	1 response (IT010) expressed support for the NDR to be dual carriageway between Fir Covert Road and Fakenham Road.
<p>Regard Given to Response: Having had regard to these comments the proposals submitted for a DCO include a dual carriageway section of carriageway between Fir Covert Road and Fakenham Road.</p> <p>Design Change: No</p>	
Issue	Consultation result
<u>On-Line Proposals</u> Fir Covert Road Roundabout	7 responses (IT003, IT003A, IT004, IT004A, IT009, IT010, IT011) expressed support for the re-introduction of the Fir Covert Road Roundabout. 1 response (IT037) suggested that traffic should be excluded from the southern half of Fir Covert Road by constructing a three-exit roundabout at this junction.
<p>Regard Given to Response: There has been extensive consideration regarding the provision of the roundabout at the Fir Covert Road junction with the NDR. After the April/May/June 2012 consultations the roundabout was relocated to the junction with Fakenham Road. The February/March 2013 consultations identified support for the roundabout at the Fakenham Road/NDR junction. However, it also identified concerns regarding the closure of Fir Covert Road, particularly by businesses here. Having given regard to these concerns, the NDR proposal was further amended so that it included an additional roundabout at the NDR junction with Fir Covert Road. This was in addition to the roundabout at the Fakenham Road/NDR junction.</p>	

<p>The applicant considers the provision of a 4 arm roundabout here as the most appropriate solution, particularly as traffic flow on Fir Covert Road is predicted to be similar or lower with the NDR. See Appendix I to the Forecasting Report (Document Reference 5.6) for actual traffic flows.</p> <p>Design Change: No</p>	
Issue	Consultation result
<p><u>On-Line Proposals</u> Drainage</p>	<p>9 responses (IT012, IT013, IT019, IT020, IT024, IT034, IT035, IT042, IT044) made comment on the drainage proposals and the effects to individual land interests. These generally requested the relocation or the resizing of the lagoons. There were also concerns expressed that the drainage mitigation proposals were not adequate enough to protect ground water resources.</p>
<p>Regard Given to Response: The NDR drainage was designed in accordance with SUDS techniques to ensure that the water quality is appropriately managed. (See Volume 1 Chapter 14 of the Environmental Assessment (Document Ref 6.1)).</p> <p>Design Change: Yes – having given regard to the location of lagoons amendments have been made to the location of Lagoon No. 25. See Design Change Ref 12.5 in Appendix V to this report.</p>	
Issue	Consultation result
<p><u>On-Line Proposals</u> Middle Road Bridge</p>	<p>4 responses (IT036, IT041, IT042, IT045) objected to the proposal for a bridge over the NDR at Middle Road. The reasons for this view included:</p> <ul style="list-style-type: none"> • it will funnel Broadland Business Park and other nearby development traffic along Middle Road; • Middle Road cannot handle the additional traffic safely; • it adds additional cost to the overall scheme; • Plumstead Road is a more suitable road to accommodate traffic than Middle Road; • it conflicts with land that has already planning permissions granted.
<p>Regard Given to Response: There has been extensive consideration of Middle Road Bridge and whilst the concerns of residents of Middle Road are acknowledged the wider view of the highway network (including the alternative routes to Middle Road) need to</p>	

be considered. There has also been extensive discussion with the parish council on this issue and they have expressed a similar view. On this basis the bridge is to be retained as part of the proposal, so there is no change to the scheme.

Design Change: No

Issue	Consultation result
<p><u>On-Line Proposals</u> Plumstead Road and the Norwich to Sheringham Railway Line Bridge</p>	<p>1 response (IT035) expressed concern regarding the elevated section of the NDR as it crosses Plumstead Road and the Norwich to Sheringham railway line, which will cause significant visual intrusion. It suggested that the NDR should pass underneath Plumstead Road and the railway line.</p>

Regard Given to Response: The applicant has previously examined routeing the NDR below Plumstead Road and the railway line and it is technically difficult due to groundwater conditions. There would be a high risk of flooding of any tunnel and a need for a permanent pumping system. This would have resulted in high maintenance costs.

Design Change: No

Issue	Consultation result
<p><u>On-Line Proposals</u> Drayton Lane link</p>	<p>2 responses (IT002, IT051) expressed concern regarding the closure of Drayton Lane, south of its junction with Reepham Road and the resulting affect of diverting traffic via Hall Lane. Issues identified included:</p> <ul style="list-style-type: none"> • Hall Lane has a dangerous bend and is not wide enough to allow large vehicles to pass each other; • Hall Lane is used by residents to walk to Drayton; • there would be negative effects to Reepham Road (between Drayton Lane and Hall Lane) and the junction of Reepham Road/Hall Lane; • Drayton Lane is the more suitable alternative to accommodate traffic; <p>Alternative suggestions included that a roundabout should be provided at the Reepham Road/Drayton Lane</p>

	<p>junction, the Drayton Lane closure should be removed and traffic calming should be provided on Hall Lane south of Drayton Lane.</p>
<p>Regard Given to Response: Further tests have been undertaken in the model to look into the option of a roundabout at the Drayton Lane/Reepham Road junction and also a more conventional priority ('T') junction. The findings for all options tested, some of which also included traffic calming on the section of Hall Lane between Drayton Lane South and Drayton village, showed that the use of Drayton Lane South, either instead of, or as well as Hall Lane, was less effective at reducing traffic flows into Drayton than the NDR scheme as proposed. In view of this, and the fact that the NDR scheme as proposed showed a benefit of reducing the amount of traffic on Hall Lane when compared to a non-NDR scenario, there was no evidence to support changing the NDR scheme as proposed.</p> <p>Design Change: No</p>	

Table 6/26: Section 42 Consultations – Those with Interest in Land On-Line Proposal Responses

Issue	Consultation result
<u>Off-Line Proposals</u> North Walsham Road/Crostwick Lane proposals	1 response (IT030) expressed concern that the closure of Rackheath Lane will result in increased journey distances for agricultural vehicles, making the farming of land either side of North Walsham Road untenable and potentially creating a rat run via Dow Lane. Suggestion was made that if a closure was needed it should be re-aligned as a private access or relocated east of the cottages on Rackheath Lane.
<p>Regard Given to Response: Whilst the comments are noted, the reasons for the closure are primarily to improve highway safety at the junction. Closure of Rackheath Lane will simplify turning movements allowing drivers waiting at the Crostwick Lane arm to concentrate on the vehicle movements on the main road.</p> <p>Design Change: No</p>	
Issue	Consultation result
<u>Off-Line Proposals</u> Closure of Green Lane East/Broad Lane at its junction with Plumstead Road	1 response (IT005) expressed concern regarding the closure of Green Lane East/Broad Lane at Plumstead Road and that this will have a significant inconvenience to farming operations (with a suggestion that an agricultural access is needed to link with land to the west of the railway line). 1 response (IT018) was in favour of the closure.
<p>Regard Given to Response: Consultation proposals already included a private means of access from Plumstead Road to the land west of the railway line.</p> <p>Design Change: Yes –. See Design Change Ref: 10.2 in Appendix V to this report.</p>	
<u>Off-Line Proposals</u> Concern regarding other closures of	2 responses (IT012, IT013) expressed concern that the closure of Holly Lane will result in rat running on other roads.

local roads	
Regard Given to Response: This junction is closed for reasons of highway safety. Junctions are not permitted on slip roads. See Forecasting Report (Document Ref 5.6) for the traffic effects of the severance.	
Design Change: No	

Table 6/27: Section 42 Consultations – Those with Interest in Land Off-Line Proposal Responses

Issue	Consultation result
<p><u>Landscaping/Planting Issues</u> Effects of NDR on landscape and type of planting</p>	<p>10 responses (IT001, IT020, IT023, IT025, IT026, IT030, IT033, IT039, IT050, IT052) made comments regarding landscaping and planting issues, of which most generally requested additional landscaping to specific land interests. The areas around Beeston Park, Rackheath Park and The Springs were particular areas of concern.</p>
<p>Regard Given to Response: Extensive planting and landscaping is planned along the route of the NDR. Planting will comprise of native, locally present species of woodland, scrub and grassland habitats, hedgerows, and wetland areas. It will tie in with landscaping schemes of adjacent developments. Further planting and landscaping to screen the NDR and promote further diversification of biodiversity has been incorporated into the schemes landscaping proposals since the pre-application consultations.</p> <p>Design Change: Yes – additional landscaping has been added to the proposals, particularly in the area around Beeston Park, Rackheath Park and The Springs. See Design Change Refs: 8.5, 9.2 and 9.11 in Appendix V to this report.</p>	

Table 6/28: Section 42 Consultations – Those with Interest in Land Landscaping/Planting Issues Responses

Issue	Consultation result
<p><u>Emission/Noise Issues</u> Concern over noise/emissions</p>	<p>6 responses (IT020, IT030, IT033, IT035, IT050, IT052) commented on noise and emissions, which generally related to the effects on specific land interests and requested discussions to consider the best mitigation measures. Comments also included.</p> <ul style="list-style-type: none"> • requests for low noise surfacing; • the emissions generated by NDR would be inconsistent with national policy.
<p>Regard Given to Response: Assessments of Noise and Air Quality are contained in Volume 1 Chapter 4 and 11 of the Environmental Statement (Document Reference 6.1) and these comments have assisted in the assessment of noise and emissions.</p> <p>Exact specification of carriageway surfacing will be determined at the detailed design stage although a low noise surface is proposed.</p> <p>Design Change: No</p>	

Table 6/29: Section 42 Consultations – Those with Interest in Land Noise/Emission Issues Responses

Issue	Consultation result
<p><u>Specific Road Effects</u> Plumstead Road through Thorpe End and North Walsham Road/Beeston Lane Junction</p>	<p>1 response (IT035) expressed concern regarding the effects of the NDR on Plumstead Road through Thorpe End. This included comment that:</p> <ul style="list-style-type: none"> • the village is likely to experience increased noise and pollution impacts; • no accurate noise calculations were available during the consultations; • traffic increases will be experienced on Plumstead Road. <p>1 response (IT052) expressed concern regarding the safety of the North Walsham Road/Beeston Lane Junction, which included a suggestion that it should be re-aligned.</p>
<p>Regard Given to Response: Traffic modelling indicates that flows will reduce on Plumstead Road with an NDR. See Appendix I to the Traffic Forecasting Report (Document Reference 5.6) for forecast traffic flows.</p> <p>The registered planning application for development at North Sprowston and Old Catton by Beyond Green Developments Ltd includes proposals to re-align this junction.</p> <p>Design Change: No</p>	

Table 6/30: Section 42 Consultations – Those with Interest in Land Specific Road Effects Responses

Issue	Consultation result
<u>Land/Property Issues</u>	<p>34 responses made comments regarding the specific effect of the NDR on land interests. These included comments on:</p> <ul style="list-style-type: none"> • plot boundary and severance line treatments, such as fencing, hedgerow planting; • the locations of gates to individual plots; • the need for specific access to fields or amendments to proposed private means of access; • the proposed reinstatement of land to be handed back after the works; • the disruption to farming and loss of crop production as a result of the scheme.
<p>Regard Given to Response: The regard given to each issue is detailed in Appendix U of this report.</p> <p>Issues regarding fencing, hedgerow planting and gating will be considered as part of the detailed design and include discussions with land owners and tenants. Matters relating to the disruption to farming and loss of crop production will be addressed through compensation negotiations.</p> <p>Design Change: Yes – particular changes resulting from these comments are detailed in Appendix V to this report.</p>	

Table 6/31: Section 42 Consultations – Those with Interest in Land – Land/Property Issues Responses

6.6 Section 42 - Conclusions

6.6.1 Comments from those with an interest in land largely related to the impact of the scheme on specific land issues. The regard given to these is contained in Appendix U of this report and the applicant will continue on-going discussions regarding these issues.

6.6.2 The key issues relating to the proposals identified during the Section 42 consultations were as follows:

6.6.3 Need for NDR – There were a total of 24 responses commenting on the need for the NDR as follows:

- (a) 6 local authorities stated they had no objection to the proposals or had no comments to make. 3 local authorities expressed support for the proposals;
- (b) 5 prescribed consultees expressed support for the NDR, 6 questioned whether the NDR was needed;
- (c) 4 responses from those with an interest in land questioned the need for the NDR.

6.6.4 Alternatives to NDR – 2 responses suggested alternatives to the NDR as follows:

- (a) 2 prescribed consultees suggested that alternatives to the NDR, such as improving public transport, had not been tested.

6.6.5 Need A1067 to A47 link – 15 responses made comment on a link between the A1067 and A47 to the west of Norwich as follows:

- (a) 1 local authority wished the link be provided at the earliest opportunity;
- (b) 8 prescribed consultees commented that there should be a link between the A1067 and A47 to the west of Norwich, 1 commented on the potential feasibility study for such a link;
- (c) 5 responses from those with an interest in land commented that there should be a link between the A1067 and A47 to the west of Norwich.

- 6.6.6 Suggested alternative routes – 6 responses suggested alternative routes for the NDR as follows:
- (a) 3 prescribed consultees suggested the NDR should be closer to Norwich, forming an inner orbital route linking the proposed developments;
 - (b) 3 responses from those with an interest in land commented that the NDR should stop at the A140.
- 6.6.7 Dual carriageway between Fir Covert Road and Fakenham Road – 3 responses made comment on the dual carriageway section between Fir Covert Road and Fakenham Road as follows:
- (a) 2 prescribed consultees supported the dualling of the NDR at this location;
 - (b) 1 response from those with an interest in land supported the dualling of the NDR at this location.
- 6.6.8 Drainage proposals - 11 responses commented on the drainage proposals as follows:
- (a) 2 prescribed consultees made specific comment on the detail of the drainage proposals;
 - (b) 9 responses from those with an interest in land commented on the drainage proposals and how these affected specific land interests;
- 6.6.9 Postwick Hub Junction - 1 response commented on the Postwick Hub Junction as follows:
- (a) 1 prescribed consultee considered the junction was over complicated.
- 6.6.10 Fir Covert Road Roundabout – 11 responses commented on the Fir Covert Road Roundabout as follows:
- (a) 1 local authority supported the re-introduction of this roundabout;
 - (b) 2 prescribed consultees supported the re-introduction of this roundabout;
 - (c) 7 responses from those with an interest in land supported the re-introduction of this roundabout. 1 response did not support the roundabout and suggested that traffic be excluded from the southern half

of Fir Covert Road by constructing a three exit roundabout at this junction.

6.6.11 Middle Road Bridge – 4 responses regarding Middle Road Bridge were received as follows:

- (a) 4 responses from those with an interest in land were not in favour of the bridge because Middle Road would experience increased through traffic and is not suitable to accommodate this.

6.6.12 Plumstead Road and Norwich to Sheringham railway line bridge – 2 responses regarding this bridge were received as follows:

- (a) 1 prescribed consultee commented on the visual intrusion of the elevated NDR at this location and suggested that the NDR should pass underneath Plumstead Road and the Norwich to Sheringham railway line;
- (b) 1 response from those with an interest in land commented on the visual intrusion of the elevated NDR at this location and suggested that the NDR should pass underneath Plumstead Road and the Norwich to Sheringham railway line.

6.6.13 Drayton Lane link – 2 responses made comment on the Drayton Lane link as follows:

- (a) 2 responses from those with an interest in land expressed concern about the closure of Drayton Lane, south of its junction with Reepham Road and the resulting effect of diverting traffic via Hall Lane. Suggestions were made that a roundabout should be provided at the Reepham Road/Drayton Lane junction.

6.6.14 Number of roundabouts on NDR– 1 response regarding the number of roundabouts on the NDR was received as follows;

- (a) 1 prescribed consultee commented that the number of roundabouts will create slow moving traffic at busy periods.

6.6.15 Number of road closures – 4 responses regarding the number of road closures were received as follows:

- (a) 2 prescribed consultees commented that local roads should remain open;

- (b) 2 responses from those with an interest in land expressed concern regarding the closure of Holly Lane.

6.6.16 North Walsham Road/Crostwick Lane proposals – 2 responses commented on the proposals for this junction as follows:

- (a) 1 prescribed consultee supported the proposals for this junction;
- (b) 1 response from those with an interest in land expressed concern that the closure of Rackheath Lane would result in increased journey distances for agricultural vehicles and make farming certain fields unviable.

6.6.17 Closure of Green Lane East/Broad Lane – 3 responses regarding this closure were received as follows:

- (a) 1 prescribed consultee did not support the closure as it would cut the parish off from other parishes;
- (b) 1 response from those with an interest in land supported this closure, 1 expressed concern that it would have a significant inconvenience to farming operation.

6.6.18 NDR represents a barrier to NMUs – 3 responses commented on the effects of the NDR on NMUs as follows:

- (a) 1 local authority commented that the potential severance effects of the NDR on NMUs needed to be mitigated;
- (b) 2 prescribed consultees expressed concern at the crossing between Bullock Hill and Petans, and at the NDR roundabouts.

6.6.19 NDR will affect the landscape – 13 responses made comment on the landscaping proposals as follows:

- (a) 2 local authorities requested that the landscaping be strengthened;
- (b) 1 prescribed consultee made comment on the impact of the NDR on the landscape;
- (c) 10 responses from those with an interest in land commented on landscaping and planting, which generally related to requests for more protection for specific land interests.

6.6.20 NDR will affect wildlife – 2 responses made comment on the effects to wildlife of the proposals as follows:

- (a) 2 prescribed consultees identified the areas of Rackheath Park and The Springs as particular areas of concern.

6.6.21 Concern about noise and emissions - 10 responses made comment on the noise and emission effects of the NDR as follows:

- (a) 4 prescribed consultees commented on noise/emission issues, including the effect to villages and the overall CO2 emissions generated by the road;
- (b) 6 responses from those with an interest in land commented on noise and emissions, which generally related to the effects on specific land interests.

6.6.22 NDR will affect specific routes – 7 responses commented on the effects of the NDR on specific routes as follows:

- (a) 1 local authority requested adequate mitigation on routes connecting the A1067 and A47 to the west of Norwich;
- (b) 4 prescribed consultees commented on the effects to specific roads, including Plumstead Road, the A1151 Wroxham Road, the B1140 through Salhouse and routes connecting the A1067 and A47 to the west of Norwich;
- (c) 1 response from those with an interest in land expressed concern regarding the effects on Plumstead Road through Thorpe End. 1 response expressed concern regarding the safety of the North Walsham Road/Beeston Lane Junction.

6.6.23 Land Property Issues - 36 responses made comment on land/property issues as follows:

- (a) 1 prescribed consultee commented on the loss of airport land, 1 commented on the loss of agricultural land;
- (b) 34 responses from those with interest in land made comments relating to specific land interests.

6.7 Section 42 - Refinements Made to Proposals

- 6.7.1 In addition to the Section 42 consultations, discussions with landowners, occupiers and their agents have been on-going before and the during the Section 42 consultations. These discussions have resulted in changes to the proposals not necessarily documented in the formal Section 42 consultation response from consultees.
- 6.7.2 The changes resulting from the Section 42 consultations, together with those from ongoing discussion with land owners/tenants, are detailed in Appendix V to this report. Locations of these can be seen on the General Arrangement Drawing Sheets 1 to 12, Drawing No's R1C093-R1-5015 to 5026 (Application Document No 2.6). The refinements to the scheme as a result of the formal Section 42 consultations are also summarised the following table.

Change Ref	Chainage	General Arrangement Sheet No.	Location	Change	Reason for change
3.2	2400 to 2910	No 3	Private means of access between Breck Farm Lane and Reepham Road Roundabout – south side of NDR.	Width of private means of access widened to 4m with 2m verges either side.	As a result of consultations. See Response Ref IT020 in Appendix U of this report.
6.6	8000	No 6	South side of NDR.	Additional grassland creation.	To prevent issues arising from bird and wildlife management concerns. As a result of consultations. See Response Ref PC017 in Appendix T of this report.
8.3	12100	No 8	North east of North Walsham Road Roundabout.	Width of private means of access widened to 4m with 2m verges either side.	As a result of consultations. See Response Ref IT020 in Appendix U of this report.
8.5	12500 to 13700	No 8	South side of NDR	Additional landscaping and woodland creation added.	As a result of Section 47 consultations. Also see: <ul style="list-style-type: none"> • Response Ref LA005 and LA009 in Appendix T of this report; • Response Ref IT001 in Appendix U of this report.

9.2	13800 to 14200	No 9	North of NDR - bunding south of The Springs Lake	New woodland added instead of grass planting.	As a result of Section 47 consultations. Also see: <ul style="list-style-type: none"> Response Ref LA005 and LA009 in Appendix T of this report; Response Ref IT023 and IT030 in Appendix U of this report.
9.9	14240	No 9	Wroxham Road Roundabout – between western and southern arms.	Field access provided from Wroxham Road Roundabout rather than Wroxham Road.	To provide access to land. As a result of consultations see Response Ref IT042 in Appendix U of this report.
9.11	13450	No 9	North east side of NDR around Lagoon 17.	Additional landscaping and woodland creation added to area of top soiling.	As a result of consultations see Response Ref IT023 in Appendix U of this report.
10.2	17000 to 16750	No 10	Private means of access from Plumstead Road – to west of NDR.	Width of private means of access widened to 4m with 2m verges either side.	As a result of consultations see Response Ref IT005 in Appendix U of this report.
12.5	19200	No 12	Lagoon 25 – east side of NDR.	Lagoon moved from west side of the NDR to the east side.	As a result of consultation. See Response Ref IT019 and IT044 in Appendix U of this report.

12.9	Off Line	No 12	Broadland Gate Roundabout.	New field access added from roundabout.	As a result of consultations. See Response Ref IT019 in Appendix U of this report.
12.11	20050	No 12	East of Postwick North East Roundabout.	New field access added from private means of access.	Access omitted from consultation now added. As a result of consultations. See Response Ref IT019 and IT044 in Appendix U of this report.

Table 6/32: Summary of Refinements to Proposals as a Result of Section 42 Consultations

7 Further Consultations

7.1 Further Consultations - Introduction

- 7.1.1 Further consultation was undertaken regarding the design changes summarised in Appendix V of this report. These changes were considered minor in nature and would only affect the immediate surrounding area. As a result a small scale consultation with landowners and directly affected persons was undertaken.
- 7.1.2 Consultation letters (128 letters) were sent out between 11 October and 17 October. Appendix W-1 of this report contains copies of the consultation letter and lists of the consultees. It also includes details of the dates these were delivered/received by the consultees and deadline provided for their response.

7.2 Further Consultations – Summary of Responses

- 7.2.1 Details of the responses received to the further consultations are contained in Appendix W-2 of this report. The key responses relating to the design changes are as follows.

Issue	Consultation result
Design Change 2.8	2 responses (DC002, DC002A) objected to the new access proposed to a parcel of land that previously had no access because of increased security concerns, usage/maintenance of the access and the area of land is small and could be used for landscaping.
<p>Regard Given to Response: The applicant had not previously provided an access because it had assumed its purchase by a neighbouring landowner. Once it was noticed that the land had no access it considered it appropriate to provide one. Negotiations with the landowner over post scheme ownership of land and maintenance responsibility will continue as part of detailed design and compensation discussions.</p> <p>Boundary fencing to mitigate security risks will be considered as part of the detailed design and will include discussions with land owners.</p> <p>Further Design Change: No</p>	
Design Change 2.9	1 response (DC009) objected to the reinstatement of the Fir Covert Road Roundabout and the proposed relocation of the equestrian crossing further from the junction. Commented that Fir Covert Road was already very busy, exiting their premises is very difficult and the provision of the roundabout will make this situation worse.
<p>Regard Given to Response: There has been extensive consideration regarding the provision of the roundabout at the Fir Covert Road junction with the NDR. After the April/May/June 2012 consultations the roundabout was relocated to the junction with Fakenham Road. The February/March 2013 consultations identified support for the roundabout at the Fakenham Road/NDR junction. However, it also identified concerns regarding the closure of Fir Covert Road, particularly by businesses here. Having given regard to these concerns, the NDR proposal was further amended so that it included an additional roundabout at the NDR junction with Fir Covert Road. This was in addition to the roundabout at the Fakenham Road/NDR junction.</p> <p>The applicant considers the provision of a 4 arm roundabout here as the most appropriate solution, particularly as traffic flow on Fir</p>	

<p>Covert Road is predicted to be similar or lower with the NDR. See Appendix I to the Traffic Forecasting Report (Document Reference 5.6) for forecast traffic flows.</p> <p>Further Design Change: No</p>	
<p>Design Change Ref: 4.11</p>	<p>1 response (DC008) objected to the proposal for temporary widening of a 200m length of the existing highway on the north side of the Holt Road/ Drayton Lane Roundabout due to the effects on mature trees and the privacy/security of Horsford Hall.</p>
<p>Regard Given to Response: Having considered this consultation response with the applicant's contractor, it was determined that a tie-in could be completed by alternative means.</p> <p>Further Design Change: Yes - See design Change Ref: 4.12 in Appendix V to this report.</p>	
<p>Design Change Ref 5.4</p>	<p>1 response (DC005) objected the creation of the new drainage Lagoon (8A) to the west of the Cromer Road Junction and noted that this would result in the removal the farm's slurry pit, which is part of operations of a working farm.</p>
<p>Regard Given to Response: Lagoon 8A was positioned in the natural low spot to minimise the flood risk. Other options were explored, but proved not feasible due to topography of the site.</p> <p>Further Design Change: No</p>	
<p>Design Change Ref 6.6</p>	<p>1 response (DC006) objected to the use of land to create an additional grassland area and considered that this was an underhand way of obtaining industrial land for an agricultural price.</p>
<p>Regard Given to Response: The additional area of grassland creation has been incorporated into the proposals to prevent issues arising from bird strike hazards associated with Norwich Airport.</p> <p>Further Design Change: No</p>	

Design Change Ref 7.1	2 responses (DC001, DC004) expressed concern regarding the provision of a bridleway in front of the properties on Buxton Road.
<p>Regard Given to Response: Further details of the proposed bridleway will be considered as part of detailed design and will include discussions with land owner.</p> <p>Further Design Change: No</p>	
Design Change 9.9	1 response (DC003) suggested that the new field access off Wroxham Road Roundabout could be continued southwards to provide an alternative access to a property.
<p>Regard Given to Response: The property already has an access from Wroxham Road. However, this suggestion will be considered as part of detailed design and will include discussions with land owners.</p> <p>Further Design Change: No</p>	
Design Change 12.5 and 12.8	1 response (DC007) objected to the relocation of Lagoon 25 and the temporary top soil storage area to the east side of the NDR because of the effects to a nearby property. An alternative location further south was suggested. 1 response expressed support for the relocation of Lagoon 25 and the temporary top soil storage area.
<p>Regard Given to Response: The lagoon was relocated following discussions with the directly affected landowner, who owns the fields on either side of the NDR. The suggested location south of the Business Park Roundabout between the NDR and the Postwick Footpath No 2 cannot be utilised due to its distance from the proposed drainage system outfall.</p> <p>Further Design Change: No</p>	

Table 7/1: Design Change Consultation Responses

7.3 Further Consultations – Conclusions

7.3.1 Whilst 34 responses were received to the design change consultations, the majority of these re-iterated the comments made during the previous consultations. 11 responses, as summarised above made comment on the proposed design changes.

7.4 Further Consultations – Refinements Made to Proposals

7.4.1 One additional change resulting from the further consultations is detailed in Appendix V to this report. The location of this can be seen on the General Arrangement Drawing Sheets 1 to 12, Drawing No's R1C093-R1-5015 to 5026 (Application Document No 2.6). It is also summarised below.

Change Ref	Chainage	General Arrangement Sheet No.	Location	Change	Reason for change
4.12	Off Line	No 4	North east of Holt Road/Drayton Lane Roundabout.	Removal of area designed for temporary traffic management, which removes need to effect mature trees and stable block.	Contractor advice that tie-in could be completely by alternative means. As a result design change consultations – see Ref: DC008.

Table 7/2: Summary of Refinements to Proposals as a Result of Further Consultations

8 Conclusion and Summary

8.1 Introduction

- 8.1.1 This consultation report has outlined the non statutory and statutory consultations undertaken on the NDR proposals since 2003.
- 8.1.2 The Planning Act 2008 requires consultation on a scheme proposal before the submission of the application for a Development Consent Order, and these consultations have been undertaken in accordance with Section 42, Section 47 and Section 48 of the Planning Act 2008.
- 8.1.3 The preferred scheme presented for application has been developed by taking into account the feedback from all these consultations.
- 8.1.4 Section 2.7 of this report provides a summary of the compliance to the legislative requirements.

8.2 Conclusion from Section 47 Consultations

- 8.2.1 Section 47 of the Planning Act 2008 outlines the requirements for consultation with the local community and the following sections detail how these requirements have been fulfilled:
- (a) Section 4.2 of this report details how the applicant produced the SOCC, following consultations with local authorities and having given regard to their comments;
 - (b) Section 4.4. of this report details the rationale for developing the SOCC;
 - (c) Section 4.5 and 4.6 of this report details how the consultations the applicant undertook have complied with the SOCC.
- 8.2.2 The applicant received a total of 1492 responses to this consultation and regard has been given to these when considering whether to make the DCO application in the same form as it was consulted upon or whether to make refinements to the scheme.

8.3 Conclusion from Section 48 Consultations

8.3.1 Section 4.9 of this report outlines how the applicant fulfilled the requirements for consultation under Section 48 of the Planning Act 2008.

8.3.2 With both the Section 47 and Section 48 consultations being undertaken at the same time it has not been possible to distinguish between responses from the two different consultations. Therefore responses received from the Section 48 consultation have been addressed together with those received from the Section 47 consultation.

8.4 Conclusion from Section 42 Consultations

8.4.1 Section 42 of the Planning Act 2008 outlines the requirements to consult:

- (a) local authorities, which were identified in accordance with Section 43 of the Planning Act 2008;
- (b) prescribed consultees, which were identified in accordance with Schedule 1 of the Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2009;
- (c) those with interest in land, which were identified in accordance with Section 44 of the Planning Act 2008.

8.4.2 Section 4.12 and 4.13 of this report details how the applicant has fulfilled the Section 42 requirements.

8.4.3 The applicant received a total of 103 responses to this consultation and regard has been given to these when considering whether to make the DCO application in the same form as it was consulted upon or whether to make refinements to the scheme.

8.5 Summary of Key Issues

8.5.1 The applicant, having given regard to the responses received from consultations under Section 47, Section 48 and Section 42 of the Planning Act 2008, has identified the key issues associated with the proposals.

8.5.2 The table below summaries the key issues, the number of comments received regarding those issues and the tables in this report where a greater explanation of them can be found.

Key Issue	Section 47 and 48	Section 42 Local Authorities	Section 42 Prescribed Consultees	Section 42 Those with Interest in land
Need for NDR (including development associated with NDR)	801 comments (Table 5/4)	9 responses (Table 6/2)	11 responses (Table 6/10)	4 responses (Table 6/24)
Suggested alternatives to the NDR	25 comments (Table 5/5)		2 responses (Table 6/11)	
Link between the A1067 and A47	366 comments (Table 5/6)	1 response (Table 6/3)	9 responses (Table 6/12)	5 responses (Table 6/25)
Alternative routes for the NDR	28 comments (Table 5/6)		3 responses (Table 6/12)	3 responses (Table 6/25)
Dual carriageway between Fir Covert Road and Fakenham Road	57 comments (Table 5/7)		2 responses (Table 6/13)	1 response (Table 6/26)
Drainage proposals			2 responses (Table 6/13)	9 responses (Table 6/26)
Postwick Hub Junction	46 comments (Table 5/7)		1 response (Table 6/13)	
Fir Covert Road Roundabout	22 comments (Table 5/7)	1 response (Table 6/4)	2 responses (Table 6/13)	8 responses (Table 6/26)
Holt Road Closure at A140 Cromer	14 comments (Table 5/7)			

Road Junction				
Middle Road Bridge	48 comments (Table 5/7)			4 responses (Table 6/26)
Plumstead Road and the Norwich to Sheringham Railway Line Bridge			1 response (Table 6/13)	1 response (Table 6/26)
Number of roundabouts on NDR	35 comments (Table 5/7)		1 response (Table 6/13)	
Drayton Lane link between NDR and Reepham Road (including Drayton lane Closure)	17 comments (Table 5/7)			2 responses (Table 6/26)
Number of roads closures	22 comments (Table 5/8)		2 responses (Table 6/14)	2 responses (Table 6/27)
North Walsham Road/Crostwick Lane proposals	32 comments (Table 5/8)		1 response (Table 6/14)	1 response (Table 6/27)
No closure of Church Street	20 comments (Table 5/8)			
Closure of Green Lane East/Broad Lane at its junction with Plumstead Road	19 comments (Table 5/8)		1 response (Table 6/14)	2 responses (Table 6/27)

Need more NMU facilities	33 comments (Table 5/9)			
The NDR represents a barrier to NMUs	22 comments (Table 5/9)	1 response (Table 6/5)	2 responses (Table 6/15)	
Effects of NDR on landscape and type of planting	196 comments (Table 5/10)	2 responses (Table 6/6)	1 response (Table 6/16)	10 responses (Table 6/28)
Effects of NDR on wildlife	17 comments (Table 5/11)		2 responses (Table 6/17)	
Effects of noise and emissions generate by the NDR	178 comments (Table 5/12)		4 responses (Table 6/18)	6 responses (Table 6/29)
Effects of NDR of specific routes	155 comments (Table 5/13)	1 response (Table 6/7)	4 responses (Table 6/19)	1 response (Table 6/30)
Loss of agricultural land and affects to property	36 comments (Table 5/14)		2 responses (Table 6/20)	34 responses (Table 6/31)

Table 8/1: Summary of Key Issues (note table references are for the tables shown in this report)

8.5.3 On completion of the statutory consultations, and having given regard to the responses received, the applicant made refinements to the scheme proposals. These refinements identified against the key issues in the table above are described in more detail in Appendix V of this report.

8.6 Further Consultations

- 8.6.1 These changes were considered minor in nature and would only affect the immediate surrounding area. As a result a small scale consultation with landowners and directly affected persons was undertaken.
- 8.6.2 11 responses made comment on the design changes, of which one resulted in a further change to the proposals.

8.7 Scheme Refinements and Conclusion

- 8.7.1 The applicant considers that it has fulfilled its requirements for consultation under the Planning Act 2008 and having given regard to the responses received has made changes to the scheme proposals that are outlined in Appendix V of this report. This appendix also details changes to the proposals that are not directly related to the proposals but are as a result of refinements to the scheme.
- 8.7.2 The applicant will continue consultation/discussions with prescribed consultees, affected land owners and the local community as the NDR scheme progresses.

Glossary

The Applicant	Norfolk County Council, as promoter of the NDR
DCO	Development Consent Order
DfT	Department for Transport
EIA	Environmental Impact Assessment
ES	Environmental Statement
GNDP	Greater Norwich Development Partnership
IRR	Inner Ring Road (for Norwich)
JCS	Joint Core Strategy
KSI	Killed or Seriously Injured (Accidents)
LEP	Local Enterprise Partnership
Marriotts Way	A long distance permissive path linking Taverham/Drayton area to the Norwich Inner Ring Road
MEP	Member of the European Parliament
MP	Member of Parliament

Regulation Number: 5(2)(q)/Section 37 Planning Act 2008

Author: Norfolk County Council

Revision	Date	Description
0	8 January 2014	Revision for application

Table of Contents

- Appendix S - Section 47 and 48 Consultations - Summary of Responses
- Appendix T - Section 42 Consultations - Summary of Responses from Local Authorities and Prescribed Consultees
- Appendix U - Section 42 Consultations - Summary of Responses from Those with Interest in Land
- Appendix V - Refinements Made to Proposals
- Appendix W-1 - Further Consultations - Consultation Letter and Schedule of Consultees
- Appendix W-2 - Further Consultations (also sent original consultation pack) - Consultation Letter and Schedule of Consultees
- Appendix X - Further Consultations - Summary of Responses
- Appendix Y - Regulation 6 Notification Letter (sent on 23 January 2013)
- Appendix Z - Table Clarifying Section 44 Entries in the Book of Reference and the Consultation Report

Appendix S

Section 47 and 48 Consultations – Summary of Responses

Norwich Northern Distributor Road - Application for Development Consent Order - Document Reference: 5.1
 Summary of Section 47 and 48 Consultation Responses

Category of Response	Typical Comments	No of Comments	Regard Given to Response	Design Change
Comments Regarding the Need for the NDR				
<p><u>NDR is needed</u> Comments that the NDR is needed</p>	<p><u>General comment the NDR is needed</u> General comments that the NDR is needed</p>	104	<p>These responses have been considered by the applicant and regard has been given to them in putting together the need and alternatives case for the NDR, which is detailed in Volume 1 Chapter 3 of the Environmental Statement (Document Ref 6.1).</p>	No
	<p><u>NDR will ease congestion</u> Comments that the NDR is needed because it will ease traffic congestion</p>	30	<p>The NDR eases congestion and delay on the northern sections of the Norwich Outer Ring Road (ORR). It also provides relief to the radial routes into Norwich within the built up area. It reduces through and cross city traffic using the ring roads and city centre roads. It reduces traffic on inappropriate orbital urban and rural roads. It does this by providing additional orbital road capacity around Norwich.</p>	No
	<p><u>NDR will provide access for growth</u> Comments that the NDR will provide vital access for growth of business and Norfolk's economy</p>	20	<p>The NDR provides enhanced strategic access to existing businesses throughout the northern suburbs and to the new employment developments proposed at Broadland Business Park/Broadland Gate, Rackheath and Norwich</p>	No

Norwich Northern Distributor Road - Application for Development Consent Order - Document Reference: 5.1
 Summary of Section 47 and 48 Consultation Responses

			International Airport. Together these sites will provide around 120 hectares of land for development.	
	<p><u>NDR will provide access to main road network</u> Comments that the NDR is needed because it will provide better access to the main road network</p>	11	At present trips from north and north east Norfolk have to travel through the built up area of Norwich to access the strategic road network and destinations beyond Norwich. The NDR will enable these trips, and trips from the north east growth area, to use a new purpose built route that circumvents the built up area of Norwich.	No
	<p><u>NDR will reduce journey times</u> Comments that the NDR is needed because it will reduce journey times/rat running</p>	3	Journey time savings on key routes across Norwich are set out in Sections 7.5 and 7.6 of the Traffic Forecasting Report (Document Ref 5.6).	No
	<p><u>NDR is an important part of NATS</u> Comments that the NDR is needed because it is an important part of NATS</p>	2	The NDR is a key element of NATS. The applicant has an implementation plan for NATS, developed following consultations in 2009, which outlines the programme of proposed measures.	No
	<p><u>Beneficial with NATS improvements made</u> Comments suggesting that the NDR will be beneficial if the other sustainable transport</p>	1	Comments noted.	No

Norwich Northern Distributor Road - Application for Development Consent Order - Document Reference: 5.1

	improvements are made			
<u>The NDR is not needed</u> Comments that the NDR is not needed	<u>General comment the NDR is not needed</u> General comments that the NDR is not needed	122	These responses have been considered by the applicant and regard has been given to them in putting together the need and alternatives case for the NDR, which is detailed in Volume 1 Chapter 3 of the Environmental Statement (Document Ref 6.1).	No
	<u>Money could be spent elsewhere</u> Comments that the money for the NDR should be spent elsewhere. Examples given were: <ul style="list-style-type: none"> • the A47 single carriageway sections • the Long Stratton bypass • the Norwich Outer Ring Road • the existing road network • public transport • sustainable transport measures • on other local authority services • other infrastructure to support development 	223	These responses have been considered by the applicant and regard has been given to them in putting together the need and alternatives case for the NDR, which is detailed in Volume 1 Chapter 3 of the Environmental Statement (Document Ref 6.1).	No
	<u>NDR will increase congestion</u>	41	The NDR eases congestion and delay on the	No

Norwich Northern Distributor Road - Application for Development Consent Order - Document Reference: 5.1
 Summary of Section 47 and 48 Consultation Responses

Category of Response	Typical Comments	No of Comments	Regard Given to Response	Design Change
	Comments that the NDR will increase congestion		northern sections of the Norwich Outer Ring Road (ORR). It also provides relief to the radial routes into Norwich within the built up area. It reduces through and cross city traffic using the ring roads and city centre roads. It reduces traffic on inappropriate orbital urban and rural roads. It does this by providing additional orbital road capacity around Norwich.	
	<u>NDR will not achieve anything</u> Comments that the NDR will not achieve anything	27	These responses have been considered by the applicant and regard has been given to them in putting together the need and alternatives case for the NDR, which is detailed in Volume 1 Chapter 3 of the Environmental Statement (Document Ref 6.1).	No
	<u>NDR will increase car usage</u> Comments that the NDR will encourage more car usage/only benefits cars users	22	Analysis of the forecast traffic has indicated that the total number of trips made is expected to be largely unchanged as a result of the NDR. See the Traffic Forecasting Report (Document Ref 5.6) paragraph 6.5.3. The increase in vehicle trips is forecast to be around 0.2% with NDR.	No
	<u>There is no existing problem</u>	10	These responses have been considered by the applicant and regard has been given to them in	No

Norwich Northern Distributor Road - Application for Development Consent Order - Document Reference: 5.1
 Summary of Section 47 and 48 Consultation Responses

Category of Response	Typical Comments	No of Comments	Regard Given to Response	Design Change
	Comments that there is no existing problem		putting together the need and alternatives case for the NDR, which is detailed in Volume 1 Chapter 3 of the Environmental Statement (Document Ref 6.1).	
	<p><u>A47 is adequate</u></p> <p>Comments that the A47 is adequate</p>	6	The NDR is not proposed as a bypass around Norwich, the A47 Southern Bypass provides this function. Rather, a function of the NDR is to distribute traffic between radial routes around north Norwich providing better access to these routes as well as Norwich International Airport and proposed developments. The A47(T) does not meet the objectives of the NDR.	No
	<p><u>NDR will create rat runs</u></p> <p>Comments that the NDR will create rat runs</p>	6	A purpose of the NDR is to encourage vehicles away from inappropriate routes in the northern area of Norwich. The applicant's consultations have identified roads where concerns about roads becoming rat runs have been identified. The key routes identified are detailed later in this appendix.	No
	<p><u>NDR will increase accidents</u></p> <p>Comments that the NDR will increase</p>	2	An analysis of forecast accidents with the NDR has been carried out and is contained in the Economic Appraisal Report, Section 7	No

Norwich Northern Distributor Road - Application for Development Consent Order - Document Reference: 5.1
 Summary of Section 47 and 48 Consultation Responses

	accidents		(Document Ref 5.7). In summary it shows that the NDR Scheme would reduce the numbers of accidents in the Norwich area.	
	<u>Cannot afford maintenance of NDR</u> Comments that the County Council cannot afford the maintenance cost of the NDR	1	The Local Highways Maintenance grant is calculated, for the A class road network, purely on length. Therefore the NDR, a future A class road, would attract extra funding through this formula.	No
<u>NDR will create associated development</u> Comments relating the NDR and development outlined in the Joint Core Strategy	<u>General comment not in favour of development</u> General comment against the development that has been associated with the NDR	77	The relationship between the NDR and planned growth in the Joint Core Strategy (JCS) is detailed in Volume 1 Chapters 2 and 3 of the Environmental Statement (Document Ref 6.1).	No
	<u>Insufficient infrastructure for development</u> Comments that there will be insufficient other infrastructure/employment opportunities to support development	37	Infrastructure capacity for growth, and the requirement and deliverability of enhanced infrastructure, has been tested through the development plan process, in this case the JCS for Broadland, Norwich and South Norfolk. Similarly the JCS is supported by a range of economic evidence demonstrating the job growth potential of the area. The Greater Norwich partners continue to work together to facilitate the timely delivery of infrastructure and	No

Norwich Northern Distributor Road - Application for Development Consent Order - Document Reference: 5.1
 Summary of Section 47 and 48 Consultation Responses

Category of Response	Typical Comments	No of Comments	Regard Given to Response	Design Change
	<p><u>NDR will only benefit developers</u> Comments that the NDR will only benefit developers</p>	36	<p>jobs. The NDR was developed to resolve existing problems of congestion and rat-running to the north and east of Norwich and to improve access to business, the strategic road network, Norwich International Airport and the wider area of North Norfolk. It has been a key element of NATS before the development of the JCS. However, the NDR would also provide supporting infrastructure for the housing growth identified in the JCS. Development serves people's needs for homes, jobs and services.</p>	No
	<p><u>Development will have adverse environmental impact</u> Comment that development will have an adverse effect on the environment</p>	10	<p>The JCS is supported by a wide range of environmental evidence including a sustainability appraisal (incorporating strategic environmental assessment). Where required, individual developments will be subject to further testing through environmental impact assessment as they come forward.</p>	No
	<p><u>Development should be elsewhere</u> Comments that mass development is more</p>	5	<p>The strategy for the scale and location of development is determined through the development plan process, in this case the JCS</p>	No

Norwich Northern Distributor Road - Application for Development Consent Order - Document Reference: 5.1
 Summary of Section 47 and 48 Consultation Responses

Category of Response	Typical Comments	No of Comments	Regard Given to Response	Design Change
	suitable elsewhere		for Broadland, Norwich and South Norfolk. The JCS is fully supported by evidence and has been the subject of statutory consultation and public examination by the independent Planning Inspectorate.	
	<p><u>NDR will urbanise villages</u></p> <p>Comments that the NDR will mean that nearby villages will become urbanised</p>	3	The strategy for the scale and location of development is determined through the development plan process, in this case the Joint Core Strategy for Broadland, Norwich and South Norfolk. Individual sites for growth are set out in more detailed local plan documents that are currently in production and have been subject to consultation. The JCS is supported by evidence and has been the subject of statutory consultation and public examination by the independent Planning Inspectorate. Individual applications for development in villages as elsewhere will be determined by the district councils in accordance with the plan unless there are material considerations that indicate otherwise.	No
	<u>NDR will not benefit city centre business</u>	1	One of the NDR's aims is to reduce the amount	No

Norwich Northern Distributor Road - Application for Development Consent Order - Document Reference: 5.1
 Summary of Section 47 and 48 Consultation Responses

Category of Response	Typical Comments	No of Comments	Regard Given to Response	Design Change
	<p>Comments suggesting that the NDR will not benefit businesses in the city centre</p>		<p>of cross city traffic using city centre roads. This enables both Norwich City Council and Norfolk County Council to continue to deliver sustainable transport measures and public realm improvements such as in Theatre Street and Westlegate which makes Norwich the attractive shopping destination it is.</p>	
	<p><u>Developments not dependant of NDR</u> Comments suggesting that the developments are not dependant on the NDR</p>	<p>1</p>	<p>The importance of the NDR in delivering the strategy for growth is set out in the JCS in particular Policy 9 and the “contingency” section (paragraphs 7.11 to 7.18) of the JCS. The implementation framework (Appendix 7) of the JCS identifies the NDR as Priority 1 infrastructure that is fundamental to the strategy or must happen to enable physical growth. The Transport Assessment for the NDR (Document Ref 5.5) demonstrates that without the NDR the planned growth would have unacceptable impacts on movements across a wide area of Norwich and the associated rural area.</p>	<p>No</p>

Comments Regarding Alternatives to the NDR				
<u>Alternatives to NDR</u> Comments suggesting alternatives to the NDR.	<u>Invest in sustainable transport</u> Comments suggesting investment in sustainable transport measures such as public transport and walking/cycling	6	These responses have been considered by the applicant and regard has been given to them in putting together the need and alternatives case for the NDR, which is detailed in Volume 1 Chapter 3 of the Environmental Statement (Document Ref 6.1).	No
	<u>Improve A47/A17</u> Comments suggesting Improvements to the A47 (particularly single carriageway sections) and/or the A17	6	Norfolk County Council is responsible for all roads within Norfolk apart from the trunk roads (A47, A17, A11 and A12), which are the responsibility of government and improved/maintained on their behalf by the Highways Agency. Norfolk County Council has campaigned extensively for full dualling of the A11 and is pleased to see that this is now in the process of being completed. It is now turning its attention to the A47 to try to influence government to commit to improvements on this road.	No
	<u>Improve existing roads</u> Comments suggesting improvements to the	5	These responses have been considered by the applicant and regard has been given to them in putting together the need and alternatives case	No

	existing roads (usually not specified)		for the NDR, which is detailed in Volume 1 Chapter 3 of the Environmental Statement (Document Ref 6.1).	
	<u>Introduce Norwich congestion charge</u> Comments suggesting the introduction of a congestion charge in Norwich	3	These responses have been considered by the applicant and regard has been given to them in putting together the need and alternatives case for the NDR, which is detailed in Volume 1 Chapter 3 of the Environmental Statement (Document Ref 6.1).	No
	<u>Improve Honingham to Lenwade route</u> Comments suggesting improvements to the existing route between A47 and A1067 in the area of Honingham to Lenwade	1	An existing route between the A1067 at Lenwade and the A47 near Honingham is being improved following public consultation in 2007. This was in response to existing issues regarding HGV through movements between the A47 and A1067.	No
	<u>Improve radial routes</u> Comments suggesting improvements to radial routes into and out of Norwich	1	These responses have been considered by the applicant and regard has been given to them in putting together the need and alternatives case for the NDR, which is detailed in Volume 1 Chapter 3 of the Environmental Statement (Document Ref 6.1).	No

Comments on the Route of the NDR				
<p><u>Need A1067 to A47 link</u> Comments relating to the need for a link between the A1067 and the A47 to the west of Norwich</p>	<p><u>General comment on need for A1067 to A47 link</u> General comments that the link between the A1067 and the A47(w) is needed but not expressing a reason for this view</p>	205	<p>A road linking the A1067 and the A47(w) would have to cross the Wensum Valley, which is designated a Special Area of Conservation (SAC) under the European Directive on the Conservation of Natural Habitats and of Wild Fauna and Flora - often referred to as the Habitats Directive. An assessment of options across the Wensum Valley concluded, in 2005, that significant impacts on the SAC would be likely, and there was doubt as to whether, under the terms of the Habitats Directive, it would be possible to design an acceptable scheme. This in turn raised the prospect that consent for a wider scheme including such a link might not be granted. On 19 September 2005, the applicant's Cabinet resolved to have no NDR link between the A47(w) and the A1067. It therefore did not form part of the adopted route.</p> <p>At its meeting of 16 September 2013 the meeting of the Norfolk County Council resolved to recommend to Cabinet that they submit an</p>	No

			<p>application for a DCO in respect of the NDR as proposed (i.e. between the A47 at Postwick and the A1067 near Attlebridge) and to also commission a report on a feasibility study of providing a link across the Wensum Valley from the A1067 to the A47(w). Whilst at its meeting of 7 October 2013 the applicant's Cabinet resolved that a "scoping report on the feasibility of providing a link across the Wensum Valley from the A1067 – A47 be written once consultation work was completed", this study has not been carried out and there is therefore currently no proposal establishing the form any link between the A1067 and A47(w) would take, or indeed whether any such link is feasible. The Transport Assessment for the NDR (Document Ref 5.5.) shows that the NDR can provide substantial benefits without a further link between the A1067 and A47(w) and that the NDR will reduce daily traffic on existing routes between the A1067 and the A47(w) between Drayton/Taverham and Costessey. The feasibility and environmental acceptability of a</p>

			between the A1067 and A47 in this area, to address an existing issue of HGV through movements.	
	<u>Link to A47 at Wood Lane</u> Comments suggesting that a link should be provided from the A1067 to the A47 at Wood Lane.	1	This is a similar route to the one described as "Lenwade to A47" above. See regard given to this response.	No
<u>NDR is too close to villages</u> Comments relating to the proximity of the NDR to villages	<u>General comment the NDR is close to villages</u> General comments that the NDR is too close to villages, but not identifying specific villages	4	Between 2003 and 2005 the applicant undertook assessment work into a number of route options, including consultations in 2003 and 2004 (detailed in Section 3.2 of this report). As a result of this work the preferred route from the A1067 Fakenham Road at Attlebridge to the A47 at Postwick was adopted in September 2005.	No
	<u>NDR is too close to Thorpe Marriott</u> Comments that the NDR is too close to Thorpe Marriott and should be built more to the north	3	Routing the NDR further north would further impact Drayton Drewray Woodland and potentially impact the common land associated with this area.	No
	<u>NDR is too close to Rackheath</u>	2	Routing the NDR to the north and east of Rackheath places the road to far from the city	No

Norwich Northern Distributor Road - Application for Development Consent Order - Document Reference: 5.1
 Summary of Section 47 and 48 Consultation Responses

Category of Response	Typical Comments	No of Comments	Regard Given to Response	Design Change
	Comments that the NDR is too close to Rackheath and should be built more to the north and east		centre and closer to the south edge of Salhouse and the north edge of Rackheath. It would require a much longer length of raised embankment to cross the NDR over Plumstead Road and the Norwich to Sheringham railway line.	
	<u>NDR is too close to Thorpe End</u> Comments that the NDR is too close to Thorpe End and should be built more to the east	1	Routing the NDR further from Thorpe End would place it closer to Rackheath. Routing the NDR to the north and east of Rackheath places the road to far from the city centre and closer to the south edge of Salhouse and the north edge of Rackheath. It would require a much longer length of raised embankment to cross the NDR over Plumstead Road and the Norwich to Sheringham railway line.	No
	<u>NDR is too close to Spixworth</u> Comments that the NDR is too close to Spixworth	1	Routing the NDR southwards would result in Buxton Road Bridge further impacting residents of properties on the road.	No
<u>NDR is too close to specific areas</u>	<u>NDR passes through Drayton Drewray</u> Comments expressing concern that the NDR passes through an area of woodland known	3	The woodland lost at Drayton Drewray is of coniferous plantation and is not part of the common land, which lies further to the north and is a more interesting area with a higher	No

<p>Comments relating to the proximity of the NDR to specific landscape areas and areas of interest</p>	<p>as Drayton Drewray</p>		<p>deciduous component interspersed with grassland and scrub areas. The impact is therefore considered to be only slightly adverse in landscape terms. However, a combined ecological and landscape mitigation area is proposed to link some of the existing woodland areas, which would comprise a mixture of woodland, scrub and grassland. Additional planting by agreement with adjacent landowners is also proposed to augment the roadside planting. This design theme continues through to the woodland at Drayton Drewray, where additional planting and mounding are provided as compensation for woodland lost and to strengthen the screen from Thorpe Marriot.</p>

should stop at Reepham Road	Marriotts Way to pass over it		Statement (Document Ref 6.1)).	
NDR too close to <u>airport</u> Comments that the NDR is too close to	NDR will <u>constrain airport expansion</u> Comments expressing concern that the current route of the NDR will constrain future expansion of the airport	4	The route of the NDR has been taken round the north of the Airport so as to minimise any possible impact on both the operational Airport land and its current aeropark development proposals.	No
Norwich Airport	NDR will <u>affect airport radar</u> Comments expressing concern that the NDR will affect the airport radar and the applicant should not be paying for its upgrade	2	The current airport radar system was installed in 1991 and is a relatively old generation of radar but meets the current operational requirements of the airport. The airport would have had to replace the radar within 10 years from now even if the NDR was not built. The current radar has issues with separating out aircraft movements from other movements (including traffic). Currently it is located far enough away from traffic routes (e.g. A140) that these can be adequately distinguished. However the NDR is located close enough that it cannot safely filter out vehicle movements. Without this filtering, there is a risk to the radar operation that would in effect close the airport as aeroplanes	No

			to upgrade the junction allows for the expansion of the park and ride facilities to ensure that the junction could accommodate this.	
	<p><u>Separate path for New Postwick Bridge</u> Comments suggesting that the shared use cycle track on New Postwick Bridge needs to be segregated from the carriageway</p>	1	The proposals provide for a shared use footway/cycleway on the south east side of New Postwick Bridge. This would be separate from the main carriageway.	No
	<p><u>Request for flyover instead of roundabout/signalled junction</u></p>	1	The Postwick Hub junction does provide for a grade separated junction, with bridges over the A47.	No
	<p><u>Suggest Option 4</u> Comments suggesting Option 4 as an alternative</p>	1	Alternative Route No 4 was suggested during the Public Inquiry for the Slip and Side Road Orders for the stand alone Postwick Hub Scheme. It proposed to maintain the existing junction layout with: <ul style="list-style-type: none"> • the closure of existing westbound A47 merge slip road, • provision of a new westbound merge slip road from the A1042 Yarmouth Road (West) on the eastern approach to the Oaks Lane junction initially in an eastbound direction but then passing through 180 degrees before joining the main A47 westbound, 	No

Norwich Northern Distributor Road - Application for Development Consent Order - Document Reference: 5.1
 Summary of Section 47 and 48 Consultation Responses

Category of Response	Typical Comments	No of Comments	Regard Given to Response	Design Change
			<ul style="list-style-type: none"> • modification to the existing bridge to provide one northbound lane and two southbound lanes over the A47 utilising the existing bridge deck, • provision of part time signalisation of Postwick North West roundabout. <p>It could not be considered a viable option due:</p> <ul style="list-style-type: none"> • to unacceptable risk on the safe operation of the A47 due to predicted queuing onto the mainline, • insufficient capacity at the Postwick P&R roundabout in the PM peak in 2020 and 2030 with significant predicted queuing, • it not enabling the Broadland Gate Business Park development to proceed, and the development benefits could not be realised. 	
<p><u>Not in favour of Fir Covert Road Roundabout</u> Comments suggesting that the Fir Covert Road</p>	<p><u>Roundabout will increase traffic between Drayton/Taverham and Costessey</u> Comments suggesting that a roundabout on Fir Covert Road will encourage rat running on the minor roads between the A1067 at Drayton/Taverham and the A47 at Costessey</p>	4	<p>With regard to rat running on the 3 routes crossing the River Wensum between the A1067 at Drayton/Taverham and the A47 at Costessey, the traffic modelling work the applicant has carried out indicates that over time traffic levels are likely to increase. However the traffic modelling shows that these flows are about the same or slightly less with the NDR in place</p>	No

Norwich Northern Distributor Road - Application for Development Consent Order - Document Reference: 5.1
 Summary of Section 47 and 48 Consultation Responses

Category of Response	Typical Comments	No of Comments	Regard Given to Response	Design Change
Roundabout with the NDR should be removed	<p><u>Already too many roundabouts</u> Comments suggesting that the NDR already has too many roundabouts</p>	2	<p>compared to the scenario without the NDR, that is to say, the NDR doesn't encourage additional trips between Taverham and Costessey on these routes. Refer to paragraphs 7.1.8 to 7.1.14 in the Traffic Forecasting Report (Document Ref 5.6).</p>	
			<p>There has been extensive consideration regarding the provision of the roundabout at the Fir Covert Road junction with the NDR. After the April/May/June 2012 consultations the roundabout was relocated to the junction with Fakenham Road. The February/March 2013 consultations identified support for the roundabout at the Fakenham Road/NDR junction. However, it also identified concerns regarding the closure of Fir Covert Road, particularly by businesses there. Having given regard to these concerns, the NDR proposal was further amended so that it included an additional roundabout at the NDR junction with Fir Covert Road. This was in addition to the roundabout at the Fakenham Road/NDR junction.</p>	No

Norwich Northern Distributor Road - Application for Development Consent Order - Document Reference: 5.1
 Summary of Section 47 and 48 Consultation Responses

Category of Response	Typical Comments	No of Comments	Regard Given to Response	Design Change
			The applicant considers the provision of a 4 arm roundabout here as the most appropriate solution, particularly as traffic flow on Fir Covert Road is predicted to be similar or lower with the NDR. See Appendix I to the Traffic Forecasting Report (Document Ref 5.6) for forecast traffic flows.	
	<p><u>Roundabout will be difficult to access</u></p> <p>Comments suggesting that a roundabout on Fir Covert Road will be difficult to access due to the volume of traffic on the NDR</p>	2	The junction has been designed for the predicted traffic levels. See Chapter 8 of the Transport Assessment (Document Ref 5.5).	No
	<p><u>Roundabout will increase traffic through Fakenham Road/Beech Avenue/Fir Covert Road junction</u></p> <p>Comments suggesting that a roundabout on Fir Covert Road will cause issues at the Fakenham Road/Beech Avenue/Fir Covert Road junction</p>	1	Traffic flows on Fir Covert Road are less in 2017, or similar in 2032, with an NDR compared to no NDR. Also, traffic flows on the A1067 will be much less with an NDR. See Appendix I to the Traffic Forecasting Report (Document Ref 5.6) for forecast traffic flows.	No
	<p><u>General comment not in favour of Fir Covert Road Roundabout</u></p> <p>General comment not in favour of the Fir</p>	1	Comments noted.	No

	Covert Road Roundabout but not specifying a reason for this view			
In favour of <u>Fir Covert Road Roundabout</u> Comments in favour of retaining the Fir Covert Road Roundabout with the NDR	<u>General comment in favour of Fir Covert Road Roundabout</u> General comment in favour of the Fir Covert Road Roundabout but not specifying a reason for this view	9	Comments noted.	No
	<u>Fir Covert Road Roundabout will be beneficial to businesses</u> Comments suggesting that having a roundabout is beneficial to businesses on Fir Covert Road	2	Comments noted.	No
	<u>Fir Covert Road Roundabout will be beneficial to Thorpe Marriott</u> Comments suggesting that having a roundabout here is beneficial to residents of Thorpe Marriott by reducing traffic here	1	A roundabout at Fir Covert Road on the NDR provides better connectivity within the highway network which will reduce the propensity for longer distance trips to use Thorpe Marriott as a cut through. Traffic modelling shows that traffic on Pendlesham Rise decreases with an NDR. See Appendix I to the Traffic Forecasting Report (Document Ref 5.6) for forecast traffic flows.	No

Norwich Northern Distributor Road - Application for Development Consent Order - Document Reference: 5.1
 Summary of Section 47 and 48 Consultation Responses

Category of Response	Typical Comments	No of Comments	Regard Given to Response	Design Change
<u>Suggested changes of Fir Covert Road Roundabout</u>	<u>Bridge instead of Fir Covert Roundabout</u> Comments suggesting that Fir Covert Road should be bridged over the NDR and not have direct access to it	1	This option was considered and rejected due to higher cost and maintenance. The bridge was also rejected as it would not provide interconnectivity between Fir Covert Road and the NDR.	No
<u>Comments on Buxton Road Bridge</u> Comments on Buxton Road Bridge	<u>Need access to Buxton Road from NDR</u> Comment suggesting that access should be provided to/from Buxton Road and the NDR by providing slip roads at the bridge	4	Whilst one of the purposes of the NDR is to provide maximum connectivity between routes to distribute traffic movements, Buxton Road is not considered one of the main radial routes into and out of the city – the adjacent B1150 North Walsham Road performs this function. Therefore no connection to the NDR is proposed.	No
	<u>Buxton Road Bridge will split community</u> Comments suggesting that the NDR bridge will segregate the properties on Buxton Road south of the NDR from the rest of Spixworth	1	The applicant has provided a bridge at Buxton Road in order to maintain local connectivity between the main village of Spixworth and properties to the south of the NDR. This bridge includes shared use footway/cycleway facilities to maintain connectivity with the existing facilities on Buxton Road.	No
	<u>General comments not in favour of Buxton Road Bridge</u> General comments not in favour of Buxton	1	Comments noted.	No

	Road Bridge but not expressing a reason for this view			
<u>Comments on the proposed drainage</u> Comments on the proposed drainage provision	<u>Drainage provision needs to be adequate</u> Comments suggesting that the drainage provision needs to be adequate to accommodate future increased rainfall.	1	The NDR is proposed to be drained by a comprehensive and sustainable drainage system. The capacity of the system makes allowance for climate change.	No
<u>Comments on Holt Road closure</u> Comments not in favour of the Holt Road closure and that Holt Road should link to the Cromer Road Junction	<u>Don't close B1149 Holt Road</u> General comments suggesting that Holt Road should not be closed but link to the Cromer Road Junction	9	Prior to 2009 the applicant intended to bring the Holt Road and Cromer Road together at the existing junction, modified to pass over the NDR. However, work at the time showed that the most effective solution would be to link the Holt Road directly to the NDR at Drayton Lane instead of at Cromer Road.	No
that Holt Road should link to the Cromer Road Junction	<u>Without Holt Road closure Drayton Lane re-alignment would not be required</u> Comments suggesting that the re-aligned Drayton Lane and its roundabout junction with NDR and major/minor priority junction	2	Holt Road is classified a B road and considered an important radial route that requires connectivity to the NDR. Given the difficulties with connecting Holt Road to the NDR at the Cromer Road Junction, the proposals are	No

Norwich Northern Distributor Road - Application for Development Consent Order - Document Reference: 5.1
 Summary of Section 47 and 48 Consultation Responses

Category of Response	Typical Comments	No of Comments	Regard Given to Response	Design Change
	with Reepham Road would not be required if Holt Road was linked to the Cromer Road Junction		considered appropriate.	
	<u>Holt Road closure will increase traffic through Drayton/Hellesdon</u> Comments expressing concern that the lack of a link to the Cromer Road Junction will result in increased traffic through Drayton/Hellesdon.	2	Traffic flows are predicted to increase on Reepham Road through Hellesdon with an NDR. Connecting Holt Road to the Cromer Road Junction was looked at previously when this issue arose and the parish council preferred the option of providing a Fakenham Road/NDR roundabout even though this was likely to be less effective. See Appendix I to the Traffic Forecasting Report (Document Ref 5.6) for forecast traffic flows.	No
	<u>Holt Road closure will create longer journeys</u> Comments that the lack of a link to the Cromer Road Junction will create a more complicated junction and longer journeys between the B1149 and A140	1	The applicant accepts that the closure of Holt Road will increase the distance of certain journeys. However, the reason for proposing this closure is given above.	No
<u>Comments on Marriotts Way Bridge</u>	<u>Peaceful nature of Marriotts Way will be affected</u> Comments expressing concern that the	1	Mitigation measures at the Marriotts Way Bridge crossing over the NDR are described in Volume 1 Chapter 8 of the Environmental Statement	No

Plumstead Road Over Bridge	<p><u>Plumstead Road Bridge should be single span</u></p> <p>Comments suggesting that a single bridge should span both Plumstead Road and the Norwich to Sheringham Railway Line</p>	1	<p>The railway line and Plumstead Road run at an angle of 43° to one another and the NDR is proposed to cross skew to the railway and square to Plumstead Road. A single span structure crossing both the road and the railway would be in excess of 100m long and require a large imposing box girder or truss bridge, which would not prove to be an economic or visually acceptable solution in this location. This arrangement would also have high future maintenance costs associated with painting the steel girders. The solution taken forward comprises a much simpler structure with the NDR between two bridges supported on reinforced earthwork.</p>	No
<p><u>Comments not in favour of Roundabouts</u></p> <p>General comments not in favour of the roundabout junctions on the</p>	<p><u>Roundabouts will cause delays on NDR</u></p> <p>Comments suggesting that the roundabouts will cause delays on the NDR, and junctions should be grade separated like those on the Norwich Southern Bypass</p>	18	<p>The junctions have been designed for the predicted traffic levels. See Chapter 8 of the Transport Assessment (Document Ref 5.5). The NDR is a distributor road and not a bypass and so not many users are expected to drive from one end to the other. In view of this the delay at the roundabouts is not expected to be a deterrent to the use of the route. Grade</p>	No

			<p>study into cycle facilities between the existing Cromer Road Roundabout South and the Norwich Cycle Network at Fifers Lane. Whilst the provision of these facilities would be useful they would need to be considered and prioritised by the County Council alongside other requests for highway improvements.</p> <p>The proposals also provide an improved cycle route between Horsford and Marriotts Way via Dog Lane, Bell Farm Track (Horsford Restricted Byway No 5) and routes through Thorpe Marriott.</p>	
	<p><u>Need NMU facilities on main radial routes</u> Comments suggesting NMU facilities along the main radial routes into and out of Norwich</p>	1	<p>The Norwich Cycle Network identifies routes between the city centre and the edge of its urban area, although these are not necessarily via the main radial routes but more appropriate, less trafficked routes. It is these routes where improvements will be prioritised. Further bus lanes introduced on radial routes as part of the NATS bus rapid transport proposals could also be used by cyclists.</p>	No
	<p><u>Need more NMU facilities between Postwick</u></p>	1	<p>The eastbound diverge slip road at Postwick, to</p>	No

Norwich Northern Distributor Road - Application for Development Consent Order - Document Reference: 5.1
 Summary of Section 47 and 48 Consultation Responses

Category of Response	Typical Comments	No of Comments	Regard Given to Response	Design Change
	<p><u>Need more NEMU facilities in the Drayton area</u> Comments suggesting more NEMU facilities in the Drayton area</p>	1	<p>requests for highway improvements.</p> <p>During the April/May/June 2012 public consultations the applicant had various requests for improved walking and cycling facilities. As a result a strategy was developed to consider and prioritise these consultation requests. The strategy published as part of the February/March 2013 public consultations identified a network of routes to link areas that generate NEMUs (such as villages, employment areas, future development) with each other, the Norwich Cycle Network and the Marriotts Way. Part of these routes utilised narrow country lanes, roads closed to motor vehicles and existing public rights of way. The applicant has prioritised NEMU improvements on this network, and these improvements have included new NEMU facilities as part of the proposals.</p>	No
	<p><u>Need more NEMU facilities in the Rackheath area</u> Comments suggesting more NEMU facilities in the Rackheath area</p>	1	<p>The NDR proposals provided for new bridleways adjacent to the NDR in the area of Rackheath, including 2 grade separated crossings of the NDR (i.e. Newman Road Bridge and beneath</p>	No

<p><u>NDR affects on Holt Road through Horsford</u> Comments expressing concern about the effects on Holt Road, particularly through Horsford</p>	<p><u>Increase traffic through Horsford</u> Comments expressing concern that the proposals will increase traffic flow/rat running on Holt Road through Horsford</p> <p><u>Need traffic calming through Horsford</u> Comments suggesting traffic calming on Holt Road through Horsford</p>	<p>10</p>	<p>Traffic flows are predicted to increase through Horsford with an NDR. See Appendix I to the Forecasting Report (Document Ref 5.6) for forecast traffic flows. This reflects traffic which is currently using rural orbital routes switching to the NDR and using routes such as the B1149 through Horsford to access the NDR.</p> <p>Traffic calming through Horsford does not form part of the application proposals. However, the applicant has given a commitment to monitor vehicles flows/speeds post NDR implementation with a view to considering such measures if appropriate.</p>	<p>No</p>
	<p><u>Need weight restriction through Horsford</u> Comments suggesting a weight restriction on Holt Road through Horsford</p>	<p>2</p>	<p>The County Council has a Route Hierarchy network which classifies roads according to their function and level of use. This was developed following assessments of roads and public consultations during the 1990's and early 2000's. Within this Route Hierarchy, Holt Road is designated a Main Distributor Route and classified a B road. Its function is therefore identified as being a distributor of local through traffic and the provision of a weight restriction would prevent the fulfilment of this. Therefore a</p>	<p>No</p>

 Summary of Section 47 and 48 Consultation Responses

Category of Response	Typical Comments	No of Comments	Regard Given to Response	Design Change
<u>NDR affects on Reepham Road</u> Comments expressing concern about the effects on Reepham Road	<u>Increased traffic on Reepham Road</u> Comments expressing concern that the proposals will increase traffic flow/rat running on Reepham Road, including through Hellesdon	8	weight restriction is not considered appropriate. Traffic flows are predicted to increase on Reepham Road through Hellesdon with an NDR. This was looked at previously and with support from the parish council a roundabout was provided for the Fakenham Road/NDR junction although this was not as effective in reducing flows on Reepham Road as some of the other measures that were considered which included traffic calming. See Appendix I to the Traffic Forecasting Report (Document Ref 5.6) for forecast traffic flows.	No
	<u>Need traffic calming through Hellesdon</u> Comments suggesting traffic calming on Reepham Road through Hellesdon	2	The possibility of traffic calming on Reepham Road through Hellesdon was suggested to the local community but the provision of the Fakenham Road/NDR roundabout was the more favoured option.	No
	<u>Need pedestrian crossing Hellesdon</u> Comments suggesting a pelican crossing across Reepham Road between Woodview Road and Gowing Road	1	The demand for pedestrians needing to cross, at this location, would need to be considered and prioritised by Norfolk County Council alongside other requests for highway improvements.	No
<u>NDR affects on</u>	<u>Increased traffic on Wroxham Road</u>	9	Traffic flows are predicted to increase on	No

Norwich Northern Distributor Road - Application for Development Consent Order - Document Reference: 5.1
 Summary of Section 47 and 48 Consultation Responses

Category of Response	Typical Comments	No of Comments	Regard Given to Response	Design Change
<p><u>Wroxham Road</u> Comments expressing concern about the effects on Wroxham Road, including through Wroxham/Hove ton</p>	<p>Comments expressing concern that the proposals will increase traffic flow/rat running on Wroxham Road, including through Wroxham/Hoveton</p>		<p>Wroxham Road close to the NDR and this is to be expected as it reflects traffic using Wroxham Road to access the NDR. See Appendix I to the Traffic Forecasting Report (Document Ref 5.6) for forecast traffic flows.</p> <p>Traffic flows at the bridge in Wroxham/Hoveton are very similar with and without an NDR indicating that it is essentially beyond the influence of the scheme.</p>	
	<p><u>Need to improve Wroxham Road/Beeston Lane junction</u> Comments suggesting that the Wroxham Road/Beeston Lane junction needs to be improved</p>	2	<p>Beeston Lane is access only and so has very few traffic movements in and out. The NDR is unlikely to change this position.</p>	No
	<p><u>Need more footways on Wroxham Road</u> Comments suggesting that more footways are needed on Wroxham Road between the Park and Ride site and Sprowston</p>	1	<p>A shared use footway is already provided on the northwest side of Wroxham Road linking the built up area of Sprowston with the Park and Ride site.</p>	No
	<p><u>Increase flooding on Wroxham Road</u> Comments suggesting the increased development will result in flooding of</p>	1	<p>The NDR is proposed to be drained by a comprehensive and sustainable drainage system. The capacity of the systems makes allowance for the climate change.</p>	No

Norwich Northern Distributor Road - Application for Development Consent Order - Document Reference: 5.1
 Summary of Section 47 and 48 Consultation Responses

Category of Response	Typical Comments	No of Comments	Regard Given to Response	Design Change
	Wroxham Road			
	<u>No one will visit Wroxham</u> Comments suggesting that the development in Norwich and surrounding countryside no one will want to visit Wroxham	1	Wroxham is a key tourist destination and therefore it is unlikely that no one would want to visit Wroxham.	No
<u>NDR affects on other radial routes</u> Comments expressing concern about the effects on the radial routes into and out of Norwich	<u>Increase traffic on Cromer Road</u> Comments expressing concern that the proposals will increase traffic flow on Cromer Road	4	Traffic flows are predicted to decrease on Cromer Road, in the built up area near the Outer Ring Road, with an NDR. See Appendix I to the Traffic Forecasting Report (Document Ref 5.6) for forecast traffic flows. This reflects traffic wishing to access external destinations changing behaviour by travelling out to the NDR rather than travelling through the built up area.	No
	<u>Increase traffic on North Walsham Road</u> Comments expressing concern that the proposals will increase traffic flow on North Walsham Road	2	Traffic flows are predicted to increase on North Walsham Road north of the NDR and this is to be expected as it reflects traffic using North Walsham Road to access the NDR. However, south of the NDR traffic flows are predicted to decrease. See Appendix I to the Traffic Forecasting Report (Document Ref 5.6) for forecast traffic flows.	No
	<u>Increase traffic on Salhouse Road</u>	2	Traffic flows are predicted to increase on	No

Category of Response	Typical Comments	No of Comments	Regard Given to Response	Design Change
	Comments expressing concern that the proposals will increase traffic flow on Salhouse Road		Salhouse Road north and south of the NDR and this is to be expected as it reflects traffic using it to access the NDR. However, on Salhouse Road in the built up area traffic flows are predicted to decrease. This reflects traffic wishing to access external destinations changing behaviour by travelling out to the NDR rather than travelling through the built up area. See Appendix I to the Traffic Forecasting Report (Document Ref 5.6) for forecast traffic flows.	
<u>NDR affects on Drayton Wood Road</u> Comments expressing concern about the effects on Drayton Wood Road in Hellesdon	<u>Increase traffic on Drayton Wood Road</u> Comments expressing concern that the proposals will increase traffic flow/rat running on Drayton Wood Road, in Hellesdon	7	Drayton Wood Road is not represented in the traffic model. However, it is recognised that it is currently used as a rat-run between Reepham Road and Drayton High Road and so vehicle flows/speeds post NDR implementation would be monitored with a view to considering traffic management measures if deemed appropriate.	No
<u>NDR affects on Middletons Lane</u>	<u>Increase traffic on Middletons Lane</u> Comments expressing concern that the proposals will increase traffic flow on	3	Traffic flows on Middleton's Lane are predicted to decrease with an NDR. See Appendix I to the Traffic Forecasting Report (Document Ref 5.6)	No

Thorpe Marriott				
<p><u>NDR affects on Green Lane West</u> Comments expressing concern about the effects on Green Lane West through Rackheath</p>	<p><u>Stop HGVs on Green Lane West</u> Comments expressing concern about the current use of Green Lane West through Rackheath by HGVs and that this needs to be prevented</p>	2	<p>Green Lane West, between its junction with Salhouse Road and Newman Road, already has a 7.5T weight restriction to protect this road from through HGV movements and ensure that HGVs access the industrial estate (located towards the north western end of this road) via Wroxham Road. However, comment has been made that the weight restriction is abused. The NDR will provide a high standard alternative to Green Lane West allowing HGVs to more easily access the industrial estate via Wroxham Road.</p>	No
<p><u>NDR affects on Fifers Lane/St Fairs Road junction</u> Comments expressing concern about the effects on the Fifers Lane/St Fairs Road junction</p>	<p><u>Increase traffic through the Fifers Lane/St Fairs Road junction</u> Comments expressing concern that the proposals will increase traffic flow on routes through the Fifers Lane/St Fairs Road junction <u>Need separate airport access</u> Comments suggesting that a separate access to the airport is needed from the NDR to reduce traffic on Fifers Lane</p>	1	<p>Traffic flows on Fifers Lane and St Fairs Road are predicted to decrease with an NDR. See Appendix I to the Traffic Forecasting Report (Document Ref 5.6) for forecast traffic flows.</p>	No
<p><u>NDR affects on Fifers Lane/St Fairs Road junction</u> Comments expressing concern about the effects on the Fifers Lane/St Fairs Road junction</p>	<p><u>Need separate airport access</u> Comments suggesting that a separate access to the airport is needed from the NDR to reduce traffic on Fifers Lane</p>	2	<p>Access to the airport is provided from the NDR but this will not be for passenger traffic. It is unlikely that the operator would reconfigure the airport to make this possible.</p>	No

Comments Regarding Suggested Changes (not detailed elsewhere in analysis)				
Other on-line changes Suggested changes to the proposals not detailed elsewhere in the analysis	<u>Lower Speed Limit on NDR</u> Suggestion that the speed limit on the NDR should be lower (i.e. 50mph or 60mph)	4	Lowering the speed limit would reduce the capacity of the NDR and not necessarily improve its safety. The NDR alignment is designed for national speed limit standard.	No
	<u>Lower speed limits on entering NDR</u> Comments suggesting that lower speed limits should be provided on the radial routes joining the NDR	2	The speed limits on the radial routes adjacent to the NDR have been revised and amended where considered appropriate.	No
	<u>Roundabout at Fakenham Road junction</u> Comments suggesting that a roundabout junction should be provided where the NDR joins the A1067 Fakenham Road	1	The proposals include the provision of a roundabout junction where the NDR joins the A1067 Fakenham Road.	No
Other off-line changes	<u>Need gravel run-offs on roundabouts</u> Comments suggesting gravel run-offs should be provided on the roundabouts to catch drivers travelling too fast	1	The applicant is not aware of these being provided at other roundabouts and does not consider them to be appropriate for the proposed NDR roundabouts. The proposals have been subject to a Stage 1 Safety Audit and this was not raised as an issue.	No
	<u>Close Church Road at A47</u> Comments suggesting that Church Road in	3	One of the reasons for introducing the Middle Road Bridge was as a result of the options	No

Norwich Northern Distributor Road - Application for Development Consent Order - Document Reference: 5.1
 Summary of Section 47 and 48 Consultation Responses

Category of Response	Typical Comments	No of Comments	Regard Given to Response	Design Change
Suggested improvements to the highway/transport infrastructure away from the main NDR proposals	Gt Plumstead should be closed at its junction with the A47 to discourage through traffic		available for accessing Gt Plumstead. Providing such a closure would reduce these options.	
	<u>Closures on Fir Covert Road</u> Comments suggesting alternative locations for closure points on Fir Covert Road	2	The applicant considers the provision of a 4 arm roundabout here as the most appropriate solution, particularly as traffic flow on Fir Covert Road is predicted to be similar or lower with the NDR. See Appendix I to the Traffic Forecasting Report (Document Ref 5.6) for forecast traffic flows.	No
	<u>Make Marriotts Way a tramway</u> Comments suggesting that Marriotts Way could be made into a tram routes into the city centre	2	Comments not related to the NDR proposals.	No
	<u>Keep traffic on radial routes</u> Comments suggesting that traffic should be kept on the main radial routes into and out of Norwich	1	The radial routes form part of the main road network and accordingly are generally classified as A or B roads. As a result these are the routes where the applicant would seek to place the majority of through traffic.	No
	<u>Review Salhouse Road speed limits</u> Comments suggesting that the speed limits along Salhouse Road are inconsistent and should be reviewed	1	Comments not related to the NDR proposals.	No

Norwich Northern Distributor Road - Application for Development Consent Order - Document Reference: 5.1
 Summary of Section 47 and 48 Consultation Responses

Category of Response	Typical Comments	No of Comments	Regard Given to Response	Design Change
	<u>Improve Marriotts Way surface</u> Comments suggesting that the surface of Marriotts Way should be improved	1	Comments not related to the NDR proposals.	No
	<u>Mini roundabout at Brick Kilns junction</u> Comments suggesting that the junction of Norwich Road and Salhouse Road (by the Brick Kilns public house) in Little Plumstead should be a mini roundabout	1	Road safety improvements have previously been undertaken at this junction. These have included visibility splay improvements, provision of a vehicle activated flashing sign and introduction of a 30mph speed limit. Side road flows are predicted to reduce as a result of the NDR. Therefore the provision of a mini roundabout is not proposed.	No
	<u>Protect resident residential areas</u> Comments suggesting that residential areas should be protected by rising bollards	1	This comment does not directly relate to the NDR proposals.	No
	<u>Grade Separated junctions on A47</u> Comments suggesting the A47 junctions with Cucumber Lane (at Brundall) and Dereham Road (at Easton) should be improved to grade separated junctions	1	This comment does not directly relate to the NDR proposals.	No
	<u>Review HGV signing on A47</u> Comments suggesting that the HGV signing	1	It is intended to review direction signing, including the signing for HGVs on the A47. This	No

Comments Regarding Quality of Consultation/Exhibitions				
<u>Positive comments on consultation</u> Comments expressing satisfaction with the consultations undertaken	<u>Consultation was satisfactory</u> Comments suggesting that the consultation was satisfactory	1	Comments noted.	No
<u>Negative comments on consultation</u> Comments expressing dissatisfaction with the consultations undertaken	<u>Consultation area was inadequate</u> Comments suggesting that the consultation area was inadequate and should have been wider, including comments that it should have included the whole of Norwich, north Norfolk or the whole of Norfolk	25	Section 4.4 of this Report defines the applicant's rationale for choosing the consultation area and the subsequent consultations undertaken.	No
	<u>Consultation was inadequate</u> General comments that the overall consultation itself was inadequate, including the status of the NDR as an NSIP project changed during the consultation period	5	When the applicant commenced the statutory pre-application process, the NDR fell within the criteria for a NSIP under the Planning Act 2008. In order to obtain consent for the NDR, therefore, the applicant had to follow the Planning Act 2008 process. On 24 July 2013, the Highway and Railway (Nationally Significant	No

Norwich Northern Distributor Road - Application for Development Consent Order - Document Reference: 5.1
 Summary of Section 47 and 48 Consultation Responses

Category of Response	Typical Comments	No of Comments	Regard Given to Response	Design Change
			<p>Infrastructure Project) Order 2013 (S.I. 2013/1883) (the Highways Order) was made, coming into force on 25 July 2013. The Order amended Section 22 of the Planning Act 2008, so that a project such as the NDR would not (from 25 July 2013 onwards) fall within the definition of a NSIP.</p> <p>The applicant considered that the NDR was, nonetheless, of national significance. Accordingly, on 25 July 2013 the applicant submitted a qualifying request to the Secretary of State for a direction under section 35(1) of the Planning Act 2008 that the NDR was a project of national significance and so should be treated as development for which development consent was required. A Section 35 direction was made on 9 August 2013.</p>	
	<p><u>No consultation on whether a NSIP</u> Comments that there was no consultation on whether the NDR was a NSIP project or not</p>	5	<p>When the applicant commenced the statutory pre-application process, the NDR fell within the criteria for a NSIP under the Planning Act 2008.</p>	No
	<p><u>Not a consultation</u> Comments suggesting that it was not a consultation, but just a presentation</p>	2	<p>The consultation process allowed for various methods for members of the public to make their comments known. These included a paper copy questionnaire, an on-line questionnaire, by e-</p>	No

	instead			
	<u>Misled at exhibition</u> Comment that the person at the exhibition felt misled as he was told that the scheme would not go for clearance to build until 2015	1	The applicant cannot confirm the contents of the conversation at the exhibition. However, the exhibition display boards (shown in Appendix R-1 to R-4 of this report) gave a clear indication of the programmed timescales for the project.	No
	<u>No A47 to A1067 traffic flow data at exhibitions</u> Comments that there was no information available at the exhibitions regarding the modelled traffic flows between the A47 and A1067	1	Provisional modelled traffic flows were shown at the exhibitions for the future years of 2017 and 2032. Figures were shown at locations on Ringland Road, Taverham Lane and Costessey Lane, which are the roads forming the 3 main routes between the A47 and A1067 in this area. Further information is shown in Appendix I to the Traffic Forecasting Report (Document Ref 5.6).	No
<u>Comments on posted information</u> Comments on the quality of information posted to residents and	<u>Some letters delivered late</u> Comments that information letters advised of the exhibitions were received after the first exhibition	10	The issue of some residents of Rackheath receiving a consultation letter on the day of the first exhibition is discussed in Section 4.6 of this report. The applicant's response was to provide for an additional exhibition on 12 August 2013 (between 13:00 to 20:00) at the Holy Trinity Church in Rackheath. Letters notifying people of this new exhibition were sent to addresses within Rackheath Parish (Appendix K-5 of this	No

Norwich Northern Distributor Road - Application for Development Consent Order - Document Reference: 5.1
 Section 42 Consultations– Summary of Local Authority Responses

Consultee	Summary of Response	Category of Response	Regard Given to Response
			<p>assessment of options across the Wensum Valley concluded, in 2005, that significant impacts on the SAC would be likely, and there was doubt as to whether, under the terms of the Habitats Directive, it would be possible to design an acceptable scheme. This in turn raised the prospect that consent for a wider scheme including such a link might not be granted. On 19 September 2005, the applicant’s Cabinet resolved to have no NDR link between the A47(w) and the A1067. It therefore did not form part of the adopted route.</p> <p>At its meeting of 16 September 2013 the meeting of the Norfolk County Council resolved to recommend to Cabinet that they submit an application for a DCO in respect of the NDR as proposed (i.e. between the A47 at Postwick and the A1067 near Attlebridge) and to also commission a report on a feasibility study of providing a link across the Wensum Valley from the A1067 to the A47(w). Whilst at its meeting of 7 October 2013 the applicant’s Cabinet resolved that a “scoping report on the feasibility of providing a link across the Wensum Valley from the A1067 – A47 be written once consultation work was completed”, this study has not been carried out and there is therefore</p>

(K) Identifies key issue described in main report

 Section 42 Consultations– Summary of Local Authority Responses

Consultee	Summary of Response	Category of Response	Regard Given to Response
			<p>currently no proposal establishing the form any link between the A1067 and A47(w) would take, or indeed whether any such link is feasible. The Transport Assessment for the NDR (Document Ref 5.5.) shows that the NDR can provide substantial benefits without a further link between the A1067 and A47(w) and that the NDR will reduce daily traffic on existing routes between the A1067 and the A47(w) between Drayton/Taverham and Costessey. The feasibility and environmental acceptability of a link to the A47(w) have not been established and the previous assessment in 2005 discarded this option. Accordingly, it is the position of the applicant that the NDR can and should be considered on its own merits without such a link. Design Change: No</p>
	<p>Commented that the information in the supporting documentation appears generally adequate in enabling an accurate assessment of the likely environmental impacts of the NDR to be made.</p>	<p>Consultation/Exhibitions (K)</p>	<p>Regard: Comments noted. Design Change: No</p>
	<p>Commented that it is highly likely that there will be an increase in traffic along the roads connecting the A1067 to the A47 at Longwater/Easton (roads such as West End and Longwater Lane, for example). This will cause an increase in</p>	<p>Specific Road Effects (K)</p>	<p>Regard: Traffic flows are generally predicted to decrease on these roads with an NDR. Refer to the Traffic Forecasting Report, Appendix I (Document Ref 5.6) for forecast traffic flows.</p>

 Section 42 Consultations– Summary of Prescribed Consultee Responses

Consultee	Summary of Response	Category of Response	Regard Given to Response
	<p>that suitable drainage methods are employed. Specific comments included:</p> <ul style="list-style-type: none"> • all phases of the scheme must have no detrimental impact on water quality, • note that in accordance with the SuDS Manual, a three tier treatment system will be put in place as part of the scheme and this must ensure that sufficient treatment measures appropriate to the individual sensitivities of each element of the scheme are incorporated. 	(K)	Design Change: No
	<p>Noted the scheme will store the surface water in all rainfall events up to the 1 in 100 year climate change event, so will prevent the proposed road from increasing flood risk elsewhere.</p> <p>Noted the road will incorporate culverts to allow existing watercourses, drains and flow paths to continue to flow underneath. Commented that it should be ensured that the culverts are designed to contain the 1% chance (1 in 100) flow.</p> <p>Noted that where spreader ditches are going to be used to allow overland flows to infiltrate rather than pass underneath the road it should be ensured that they will also be sized to contain this 1% chance event.</p>	On-Line Proposals (K)	<p>Regard: : Through continued correspondence the Environment Agency previously advised that in accordance with BRE365 a minimum infiltration rate in the area of the lagoons was used rather than an average. It also advised that lagoons with longer drain down times exceeding 7 days should be able to accommodate a 1 in 100 follow on storm.</p> <p>Design Change: Yes – changes to lagoon size and position have been made as a result of on-going discussions with the Environment Agency. See Appendix V of this report.</p>

 Section 42 Consultations– Summary of Prescribed Consultee Responses

Consultee	Summary of Response	Category of Response	Regard Given to Response
	Requested confirmation whether the scheme does not include or impact such infrastructure or that said infrastructure will comply with International Commission on Non-ionising Radiation Protection public exposure guidelines.		
Ref: PC020 Bawburgh Parish Council	Stated that the NDR should link to the southern bypass and not stop at the A1067 Fakenham Road.	Route of NDR (K)	Regard: See response to PC016. Design Change: No
Ref: PC021 Blofield Parish Council	Commented that if alterations and expansion takes place as planned at the Postwick Park and Ride then Norfolk County Council should improve the facilities and services there. Comments that the plans refer to the A47 as part of the national trunk road network and that large parts of the A47 are still single carriageway. Suggested increased priority should be given to dualling all remaining sections of the A47.	Other Comments	Regard: Comment regarding Postwick Park and Ride does not relate to the NDR proposals. Norfolk County Council is responsible for all roads within Norfolk apart from the trunk roads (A47, A17, A11 and A12), which are the responsibility of government and improved/maintained on their behalf by the Highways Agency. Norfolk County Council has campaigned extensively for full dualling of the A11 and is pleased to see that this is now in the process of being completed. It is now turning its attention to the A47 to try to influence government to commit to improvements on this road. Design Change: No

 Section 42 Consultations– Summary of Prescribed Consultee Responses

Consultee	Summary of Response	Category of Response	Regard Given to Response
Ref: PC022 Caister St Edmund Parish Council	Commented that its response regarding the NDR is unchanged.	Other Comments	Regard: Comments noted. Design Change: No
Ref: PC023 Colney Parish Council	Considered that this NDR consultation is not effective and omits the “necessary information” for the wider community that will be affected by the NDR to make an informed decision and destroys any vestige of the applicant’s much vaunted support for “localism”.	Consultation/Exhibitions (K)	Regard: The consultation pack consisted of a cover letter, scheme information document, non-technical summary to the PEIR, a full copy of the PEIR, non-technical note on transport modelling and a CD containing these documents and the appendices to the scheme information document. This is considered a full pack of information to enable the consultees to provide informed responses on the NDR. Design Change: No
	Commented that the large housing developments proposed are hugely unpopular with most residents but welcomed as a potential “gravy train” by developers. Considers that many parishes would accept small developments where the emphasis is on affordable houses to satisfy local housing needs. Suggested that recent government population growth statistics indicate that some housing schemes could be dropped altogether and others	Other Comments	Regard: The strategy for the scale and location of development is determined through the development plan process, in this case the JCS for Broadland, Norwich and South Norfolk. The JCS is fully supported by evidence and has been the subject of statutory consultation and public examination by the independent Planning Inspectorate. The relationship between the NDR and planned growth in the Joint Core Strategy (JCS) is detailed in Volume 1 Chapters 2 and 3 of the Environmental Statement

(K) Identifies key issue described in main report

Norwich Northern Distributor Road - Application for Development Consent Order - Document Reference: 5.1
 Section 42 Consultations– Summary of Prescribed Consultee Responses

Consultee	Summary of Response	Category of Response	Regard Given to Response
	<p>significantly reduced.</p> <p>Commented that Norfolk County Council has stated that most new houses associated with the NDR would not be for existing local needs but will be for economic migrants and considers there is something fundamentally wrong when, apparently, thousands of future jobs in the Greater Norwich area have to rely on migrant workers and the plan to build thousands of homes to house them.</p>		<p>(Document Ref 6.1).</p> <p>Design Change: No</p>
	<p>Commented that thousands of acres of productive agricultural land will be permanently lost and great swathes of the Norfolk countryside with pleasant landscape values will be suburbanised beyond recognition.</p>	<p>Land/Property Issues (K)</p>	<p>Regard: The loss of productive agricultural land is detailed in Volume 1 Chapter 13 of the Environmental Statement (Document Ref 6.1). This identifies that the proposed NDR will have a total spatial footprint of 354ha (874acres), of which 329.4ha (814acres) is currently used for agriculture.</p> <p>Design Change: No</p>
	<p>Commented that the NDR from Postwick to Attlebridge will cost nearly £142 million; any extension will cost tens of millions of pounds more and it is likely that the present figure will underestimate costs. Local councils will experience an increase in shortfall costs and already face a shortfall in their budgets for years</p>	<p>Need for NDR (K)</p>	<p>Regard: These responses have been considered by the applicant and regard has been given to them in putting together the need case for the NDR, which is detailed in Volume 1 Chapter 3 of the Environment Statement (Document Ref 6.1).</p> <p>Design Change: No</p>

 Section 42 Consultations– Summary of Prescribed Consultee Responses

Consultee	Summary of Response	Category of Response	Regard Given to Response
	<p>the country is already overburdened with.</p> <p>Noted that alternatives to the NDR, including the works proposed at Postwick Interchange, are awaited from the respective public inquiries and to grant permission for the road layout proposed in any application would pre-empt the new policy requirements.</p>	Other Comments	<p>Regard: The outcome of the public inquiry for a stand alone Postwick Hub Junction is awaited. The DCO application is for a Postwick Hub Junction associated with the NDR, which is a different proposal.</p> <p>Design Change: No</p>
	<p>Commented that the only consultation on the route options for a possible NDR was in 2003 and many things have changed in the last ten years. Suggested that all the originally proposed routes should now be re examined.</p> <p>Commented that whilst the consultation in 2003 showed residents in favour of the Blue Route option (the currently proposed route) the proposals have changed significantly since then as the 2003 consultation NDR was a full length route from the A47 west of Norwich to the A47 east of Norwich, and did not include Postwick Hub Junction. Therefore support for the NDR should only be seen on this basis and this basis alone.</p> <p>Commented that there has been no consultation on the half-NDR scheme with presentations only addressing minor issues and changes, not</p>	Consultations/Exhibitions (K)	<p>Regard: All consultations on the NDR since 2005 showed the NDR being proposed between the A47 at Postwick and the A1067 near Attlebridge including the more recent consultations in April/May/June 2012 (described in Section 3.3) and in February/March 2013 (described in Section 3.4). During these consultations there was the opportunity to comment on the route. In addition there has been opportunity to comment on the route as part of the statutory pre-application consultations.</p> <p>Design Change: No</p>

(K) Identifies key issue described in main report

Norwich Northern Distributor Road - Application for Development Consent Order - Document Reference: 5.1
 Section 42 Consultations– Summary of Prescribed Consultee Responses

Consultee	Summary of Response	Category of Response	Regard Given to Response
	<p>whether the half scheme is supported.</p> <p>Commented that no alternative transport strategies based on smaller scale road building and greater front-loading of public transport have been tested. In addition since 2003 the plans for the three quarter NDR route have never been properly tested against alternatives, although both local campaigners and developers have called for an alternative route and options for light railway connections.</p>	<p>Alternative s to NDR (K)</p>	<p>Regard: These responses have been considered by the applicant and regard has been given to them in putting together the need case for the NDR, which is detailed in Volume 1 Chapter 3 of the Environment Statement (Document Ref 6.1).</p> <p>Design Change: No</p>
	<p>Commented that the NDR cuts the parish in two with plans to close off Low Load and Smees Lane, together with a massive flyover crossing the C874 Plumstead Road.</p> <p>Commented that the proposals together with the large housing proposed for the North East Triangle will funnel traffic along Plumstead Road and cause a projected traffic increase of 100% on a very busy C class road. This will cause significant increase in noise, carcinogenic pollution, increased congestion and a loss of quality of life through the heart of a conservation area.</p>	<p>Specific Road Effects (K)</p>	<p>Regard: One of the reasons for introducing a bridge over the NDR at Middle Road was to improve access options to Gt and Lt Plumstead and help mitigate concerns that the NDR cut the parish in two. The bridge was located here, rather than at Low Road or Smees Lane, because Middle Road was considered the better standard road.</p> <p>Traffic modelling indicates that flows will reduce on Plumstead Road with an NDR. See Appendix I to the Traffic Forecasting Report (Document Ref 5.6) for forecast traffic flows.</p> <p>Design Change: No</p>

(K) Identifies key issue described in main report

 Section 42 Consultations– Summary of Prescribed Consultee Responses

Consultee	Summary of Response	Category of Response	Regard Given to Response
	<p>Commented that closing roads will force cars and motor cycles to drive either to Wroxham Road or Plumstead Road to enter the City, increasing travel time, travel cost, increased carbon footprint and carcinogenic pollution.</p>	<p>Other Comments</p>	<p>Regard: Middle Road is now being left open to provide better connectivity to Norwich for residents of Great Plumstead. Design Change: No</p>
	<p>Questioned why the line of the NDR is different from that which is in the local plan, for Broadland, which was to connect the Postwick Hub via Green Lane South to the C874 Plumstead Road at the top of Dussindale Drive. By changing the local plan, it will thwart the option of the more cost effective Pink Route. Suggested that by changing to the Pink Route the inner transport link could be delivered in a more cost effective and timely manner.</p> <p>It would link up with significant housing already approved at Laurel Farm/Brook Farm, Blue Boar Lane and at a modified Beyond Green application, to facilitate a direct connection from the Postwick Hub coming close to Tesco Superstore and then to Sprowston Park and Ride onward to Norwich Airport.</p>	<p>Route of NDR (K)</p>	<p>Regard: Section 3 outlines the process by which the current route of the NDR was adopted. The alternative of an inner orbital link road using routes through proposed development considered as Alternative No 5 in the need and alternatives case (Volume 1 Chapter 3 of the Environment Statement (Document Ref 6.1)). Design Change: No</p>
	<p>Commented that an NDR-centred transport policy will lead to greater vehicle use, greater journeys and greater congestion that will prevent any future</p>	<p>Emission/Noise Issues (K)</p>	<p>Regard: Carbon emissions is one of the topics considered in the Environmental Impact Assessment (EIA) process. These assessments</p>

	<p>the village so it still hopes to see this taken into account. Commented that it would like to see an underpass built under the NDR linking Petans to Horsham St Faith.</p>		
<p>Ref: PC030 Norton Subcourse Parish Council</p>	<p>Commented that it would like to see the new road join the A47 at its western end. The current plans for the NDR, to only join the A1067 Fakenham Road in the west, will result in many vehicles taking a shortcut through Ringland Hills, which would be unacceptable and dangerous.</p>	<p>Route of NDR (K)</p>	<p>Regard: See response to PC016. Design Change: No</p>
<p>Ref: PC031 Rackheath Parish Council</p>	<p>Commented on its disappointment and frustration regarding the poor organisation of the consultation meeting. Noted that the letters to the Rackheath residents, turned up on the day of the consultation and for those who were at work it meant they didn't get the letter until the evening. This allowed no time to prepare for a consultation there and meant that many people did not or could not attend the meeting.</p>	<p>Consultation/Exhibitions (K)</p>	<p>Regard: Whilst Rackheath residents were able to attend any of the other exhibitions, in light of the comments the applicant decided to schedule an additional exhibition on 12 August 2013 (between 13:00 to 20:00) at the Holy Trinity Church on Salhouse Road. Letters notifying people of this new exhibition were sent to addresses within Rackheath Parish (Appendix K-5 of this report). Design Change: No</p>
	<p>Commented that there is not enough proof that the benefits to the area would be greater than if</p>	<p>Need for NDR (K)</p>	<p>Regard: The Transport Assessment (Document Ref 5.5), Economic Appraisal Report (Document</p>

(K) Identifies key issue described in main report

Norwich Northern Distributor Road - Application for Development Consent Order - Document Reference: 5.1
 Section 42 Consultations– Summary of Prescribed Consultee Responses

Consultee	Summary of Response	Category of Response	Regard Given to Response
	<p>the Council were to put the money into the improvement of existing roads.</p> <p>Commented that it is a fallacy the NDR promotes sustainable economic growth and creates wealth in Broadland and does not agree that the NDR will reduce traffic in the city. There has been no real evidence to support this.</p>		<p>Ref 5.7) and Land Use and Economic Development Report (Document Ref 10.3) demonstrates that there will be traffic reductions in the city and economic growth with the NDR.</p> <p>Design Change: No</p>
	<p>Commented that their opinion is that the NDR is too far out to make any real difference. Suggested that the problem with buses and other sustainable measures is a route and timing problem. The residents of Rackheath complain about the lack of buses not the time it takes to get in city or the route they take.</p>	Route of NDR (K)	<p>Regard: These responses have been considered by the applicant and regard has been given to them in putting together the assessment of alternatives, which is detailed in Volume 1 Chapter 3 of the Environment Statement (Document Ref 6.1).</p> <p>The alternative of an inner orbital link road closer to Norwich is considered as Alternative No 5 in the need and alternatives case (Volume 1 Chapter 3 of the Environmental Statement (Document Ref 6.1)).</p> <p>Design Change: No</p>
	<p>Commented that the only consultation on the route options for a possible NDR was in 2003, where there was no option for people to say they did not feel a road was needed. There was only a request to choose the best route option.</p>	Consultation/Exhibitions (K)	<p>Regard: See response to PC025.</p> <p>Design Change: No</p>

(K) Identifies key issue described in main report

Norwich Northern Distributor Road - Application for Development Consent Order - Document Reference: 5.1
 Section 42 Consultations– Summary of Prescribed Consultee Responses

Consultee	Summary of Response	Category of Response	Regard Given to Response
	Suggested that many things have changed in the last ten years and therefore all the original proposed routes should now be re examined.		
	Commented that the NDR will cause most of the predicted new traffic in north east Norwich and plans for both the NDR and Postwick Hub have never been properly tested against alternatives, this includes light railway. Suggested that money could be better spent on improving public transport and introducing free transport for children. This would encourage parents to put their child on a bus and leave the car in the garage.	Alternative s to NDR (K)	Regard: These responses have been considered by the applicant and regard has been given to them in putting together the assessment of alternatives, which is detailed in Volume 1 Chapter 3 of the Environment Statement (Document Ref 6.1). Design Change: No
	Commented that the proposals will cut the parish off from the Plumstead area and the city, and its parishioners would have to take a detour onto the NDR turning a 5 minute journey into a 10minute journey at least. This will not only cost more in fuel and cause more environmental damage, but is going against current government policy.	Off-Line Proposals (K)	Regard: Whilst the comments are noted, the reasons for closure of Green Lane East/Broad Lane at its junction with Plumstead Road are primarily to improve highway safety at this junction. The closure of Green Lane East/Broad Lane at its junction with Plumstead Road will remove the existing crossroads junction making it a more conventional and safer T-junction. Design Change: No

(K) Identifies key issue described in main report

Norwich Northern Distributor Road - Application for Development Consent Order - Document Reference: 5.1
 Section 42 Consultations– Summary of Prescribed Consultee Responses

Consultee	Summary of Response	Category of Response	Regard Given to Response
	<p>Suggested the road closures are going to be a problem in many parishes and this leads to greater vehicle use, longer journeys and increased congestion that will put any future transport plans at risk. The existing roads, all in their time were created to ease traffic, have now been proven to be ineffective.</p>	<p>Off-Line Proposals (K)</p>	<p>Regard: The applicant has tried to keep the number of road closures to a minimum and they are generally only provided for reasons of highway safety where minor roads are severed by the NDR or to encourage traffic to use more appropriate routes. Design Change: No</p>
<p>Ref: PC032 Salhouse Parish Council</p>	<p>Commented that it is wrong that the proposed NDR has become inextricably linked to the planned development of the North East Growth Triangle as designated in the Joint Core Strategy. This was not the purpose of the road when it was first proposed. As such there is a risk the road will become a facilitator for excessive development.</p> <p>Considered that the net impact on residents of Salhouse could be an increase in traffic which counteracts any benefits due to the new infrastructure. The NDR might marginally reduce traffic on the outer ring road, but it cannot see any argument for the NDR reducing traffic in Norwich city centre.</p>	<p>Need for NDR (K)</p>	<p>Regard: The NDR was developed to resolve existing problems of congestion and rat-running to the north and east of Norwich and to improve access to business, the strategic road network, Norwich International Airport and the wider area of North Norfolk. It has been a key element of NATS before the development of the JCS. However, the NDR would also provide supporting infrastructure for the housing growth identified in the JCS. Development serves people's needs for homes, jobs and services. The relationship between the NDR and planned growth in the Joint Core Strategy (JCS) is detailed in Volume 1 Chapters 2 and 3 of the Environmental Statement (Document Ref 6.1). Design Change: No</p>
	<p>Expressed concern regarding effects to the peace and tranquillity of historic Rackheath Park, the</p>	<p>Wildlife</p>	<p>Regard: Environment Agency and Natural England have been consulted on the habitat and</p>

(K) Identifies key issue described in main report

Consultee	Summary of Response	Category of Response	Regard Given to Response
	<p>wetland habitat of Dobb's Beck and The Springs, to the north west of the A1151 (which drains into the River Bure) and the peace and beauty of the area around Beeston St. Andrew.</p> <p>Commented that a further environmental concern is that the new road will cause increased surface drainage runoff into local (Broadland) water courses and that it will contain pollutants from the road.</p>	<p>Issues (K)</p>	<p>water quality of these areas. Measures have been incorporated into the scheme design to mitigate for any impacts. The NDR is proposed to be drained by a comprehensive and sustainable drainage system. The capacity of the system makes allowance for climate change. (See Volume 1 Chapter 14 of the Environmental Assessment (Document Ref 6.1)).</p> <p>Design Change: No</p>
	<p>Expressed concern regarding the predicted increase in traffic along the A1151 and B1140 between the NDR and the new housing developments around Wroxham and Hoveton. Suggested that this would result in further tailbacks and delays on an already popular and crowded tourist route thus threatening the sustainability and economic viability of local tourism and quality of life of local residents.</p> <p>Noted that local traffic from Salhouse uses this route to the local shopping centre and other facilities at Wroxham. As congestion increases on the A1151, it considers that traffic will increasingly use Salhouse as a 'rat run' to avoid the congestion.</p>	<p>Specific Road Effects (K)</p>	<p>Regard: Traffic flows are predicted to increase on Wroxham Road close to the NDR and this is to be expected as it reflects traffic using Wroxham Road to access the NDR. Refer to the Traffic Forecasting Report, Appendix I (Document Ref 5.6) for forecast traffic flows.</p> <p>Traffic flows are predicted to increase on Salhouse Road north and south of the NDR and this is to be expected as it reflects traffic using it to access the NDR. However, on Salhouse Road in the built up area traffic flows are predicted to decrease. This reflects traffic wishing to access external destinations changing behaviour by travelling out to the NDR rather than travelling through the built up area. Refer to the Traffic Forecasting Report,</p>

(K) Identifies key issue described in main report

Norwich Northern Distributor Road - Application for Development Consent Order - Document Reference: 5.1
 Section 42 Consultations– Summary of Prescribed Consultee Responses

Consultee	Summary of Response	Category of Response	Regard Given to Response
			<p>Appendix I (Document Ref 5.6) for forecast traffic flows.</p> <p>Design Change: No</p>
	<p>Commented that the Postwick Hub is poorly designed and its complicated nature will actually deter traffic from using the NDR, thus causing overspill traffic onto other roads. Considers that the extra time and fuel consumption will force HGV drivers to seek alternative routes through Gt Plumstead and Salhouse. The money should be spent improving elsewhere on the A47.</p>	<p>On-Line Proposals (K)</p>	<p>Regard: During design development a number of significant engineering constraints influenced the scheme design. These include the River Yare/Railway Bridge, the existing Postwick Bridge, a high pressure gas main and the nearby property settlements at Heath Farm and Postwick village.</p> <p>Given the constraints at the site and having assessed a number of options the proposed design is considered the most practicable solution to address the capacity issues and accommodate the committed development at Broadland Gate Business Park.</p> <p>Design Change: No</p>

(K) Identifies key issue described in main report

Norwich Northern Distributor Road - Application for Development Consent Order - Document Reference: 5.1
 Section 42 Consultations– Summary of Prescribed Consultee Responses

Consultee	Summary of Response	Category of Response	Regard Given to Response
	<p>Commented that the elevated section of the NDR between Thorpe End and Rackheath will be an enormous blot on the landscape and will increase traffic noise for miles around. Considers that the junction with Plumstead Road and the railway crossing needs to be re-designed.</p>	<p>On-Line Proposals (K)</p>	<p>Regard: The applicant has previously examined routing the NDR below Plumstead Road and the railway line and it is technically difficult due to groundwater conditions. There would be a high risk of flooding of any tunnel and a need for a permanent pumping system. This would have resulted in high maintenance costs. Design Change: No</p>
	<p>Commented that the argument in favour of closure of local lanes and forcing traffic onto NDR should be resisted. These lanes are used by the farm vehicles, cyclists and horse-riders and should be able to continue their traditional travel patterns without having to venture onto the NDR. Noted that there have been a number of serious accidents on A47 Southern Bypass due to slow moving vehicles using a road designed for high speed and such vehicles should be deterred from using the NDR.</p>	<p>Off-Line Proposals (K)</p>	<p>Regard: The applicant has tried to keep the number of road closures to a minimum and they are generally only provided for reasons of highway safety where minor roads are severed by the NDR or to encourage traffic to use more appropriate routes. Design Change: No</p>
	<p>Commented that the roundabouts on Salhouse Road and other radial routes may cause delays for drivers going into and out of Norwich, and cyclists, horse-riders and pedestrians will find it almost impossible to cross this busy road intersection and other similar junctions. Consider</p>	<p>Walking/Cycling/Horse Riding Issues (K)</p>	<p>Regard: Salhouse Road junction operates below its theoretical capacity for the predicted traffic levels. Whilst it exceeds it desirable capacity in 2032 the delay is considered reasonable and the queues can be accommodated safely. See Chapter 8 of the</p>

Consultee	Summary of Response	Category of Response	Regard Given to Response
	<p>that provisions must be made to enable them to cross.</p> <p>Commented that the isolated pedestrian over-bridges proposed will be too far apart to attract users who will seek the shortest route.</p>		<p>Transport Assessment (Document Ref 5.5).</p> <p>During the April/May/June 2012 public consultations the applicant had various requests for improved walking and cycling facilities. As a result a strategy was developed to consider and prioritise these consultation requests. The strategy published as part of the February/March 2013 public consultations identified a network of routes to link areas that generate NMUs (such as villages, employment areas, future development) with each other, the Norwich Cycle Network and the Marriotts Way. Part of these routes utilised narrow country lanes, roads closed to motor vehicles and existing public rights of way. The applicant has prioritised NMU improvements on this network, and these improvements have included new NMU facilities as part of the proposals.</p> <p>Design Change: No</p>
	<p>Commented that the B1140 is the designated sugar beet route from north of Wroxham Bridge to Cantley. The NDR will, if adequately managed, take HGV traffic away from Salhouse and onto the NDR and A47, especially if that is also improved. Suggested that villagers said they would accept</p>	<p>Suggested Changes (K)</p>	<p>Regard: Norfolk County Council has a Route Hierarchy network which classifies roads according to their function and level of use. This was developed following assessments of roads and public consultations during the 1990s and early 2000s. Within this Route Hierarchy roads</p>

	<p>additional housing in the Aylsham Area and the proposed supermarket development on Fir Covert Road should it gain approval.</p>		<p>place compared to the scenario without the NDR, that is to say, the NDR doesn't encourage additional trips between Taverham and Costessey on these routes. Refer to the Traffic Forecasting Report, Appendix I (Document Ref 5.6) for forecast traffic flows. Design Change: No</p>
	<p>Commented that it is alleged that the road will generate an additional 25,000 tonnes of CO2 emissions each year, have adverse impacts on many protected species, and have adverse impact on the landscape. Given this the Parish Council considers that the project does not merit construction, and that the NDR is merely an access road for the proposed development in the growth triangle. It does not believe the NDR in its current form will bring the sustained and economic benefit to the county that Transport for Norwich has suggested.</p>	<p>Need for NDR (K)</p>	<p>Regard: Carbon emissions is one of the topics considered in the Environmental Impact Assessment (EIA) process. These assessments are included in Volume 1 Chapter 5 of the Environmental Statement (Document Ref 6.1). The assessment shows a slight increase in carbon emissions with the NDR, but this needs to be considered within the wider context of NATS which will enable other sustainable travel modes to be introduced. The Land Use and Economic Development Report (Document Ref 10.3) demonstrates that there will be economic growth with the NDR. Design Change: No</p>
	<p>Commented that it remains firmly opposed to the proposed mineral extraction from Swannington Bottom Plantation and is concerned that this site will be exploited in the need to source locally</p>	<p>Other Comments</p>	<p>Regard: The scheme earthworks have been designed to maintain an earthworks balance, to ensure that no excess soil is created and no soil</p>

	available construction aggregate.		is required to be imported. Design Change: No
	Commented that growth should be by gradual means, and housing provided when industry is established and requires a workforce.	Other Comments	Regard: Comment does not relate to NDR proposals. Design Change: No
Ref: PC036 Wroxham Parish Council	Commented that the general view amongst a large number of residents seems to be that there is little justification for building the NDR, unless to facilitate the creation of new housing development. Considered that there is no doubt that the principal beneficiaries will be landowners and housing developers.	Need for NDR (K)	Regard: The NDR was developed to resolve existing problems of congestion and rat-running to the north and east of Norwich and to improve access to business, the strategic road network, Norwich International Airport and the wider area of North Norfolk. It has been a key element of NATS before the development of the JCS. However, the NDR would also provide supporting infrastructure for the housing growth identified in the JCS. Development serves people's needs for homes, jobs and services. The relationship between the NDR and planned growth in the Joint Core Strategy (JCS) is detailed in Volume 1 Chapters 2 and 3 of the Environmental Statement (Document Ref 6.1). Design Change: No
	Expressed concern at the number of roundabouts proposed over the length of the route, which will cause slow moving traffic jams during busy	On-Line Proposals (K)	Regard: Wroxham Road junction operates below its theoretical capacity for the predicted traffic levels. Whilst it exceeds it desirable

(K) Identifies key issue described in main report

	<p>periods. Particular concerns are regarding the close proximity of roundabouts at North Walsham Road, Wroxham Road, Salhouse Road and Plumstead Road.</p> <p>Suggested the solution to the problem is to replace the proposed Wroxham Road Roundabout with a bridging arrangement either under or over the NDR, which will provide a good traffic flow along the A1151.</p>		<p>capacity in 2032 the delay is considered reasonable and the queues can be accommodated safely. See Chapter 8 of the Transport Assessment (Document Ref 5.5). The NDR is a distributor road and not a bypass and so not many users are expected to drive from one end to the other. In view of this the delay at the roundabouts is not expected to be a deterrent to the use of the route. Grade separated junctions would have a much greater environmental impact and be more difficult to justify.</p> <p>Design Change: No</p>
	<p>Commented on existing traffic problems that already exist on the A1151 in Wroxham and Hoveton and traffic volumes have increased considerably over the ensuing years. With new houses being planned in Hoveton, Wroxham, and Rackheath the A1151 will be seriously overburdened during busy periods.</p> <p>Commented that a steady flow of traffic on the A1151 will not be maintained when it will be obstructed by a two-lane dual carriageway NDR with a single lane roundabout to cross.</p> <p>Suggested a special inquiry/consultation to</p>	<p>Specific Road Effects (K)</p>	<p>Regard: Traffic flows are predicted to increase on Wroxham Road close to the NDR and this is to be expected as it reflects traffic using Wroxham Road to access the NDR. Refer to the Traffic Forecasting Report, Appendix I (Document Ref 5.6) for forecast traffic flows.</p> <p>Design Change: No</p>

		Fakenham Road.		
	NA	<p>Considered that the only scheme that gives maximum benefit is one which links to the A47 to the west of Norwich.</p>	Route of NDR (K)	<p>Regard: A road linking the A1067 and the A47(w) would have to cross the Wensum Valley, which is designated a Special Area of Conservation (SAC) under the European Directive on the Conservation of Natural Habitats and of Wild Fauna and Flora - often referred to as the Habitats Directive. An assessment of options across the Wensum Valley concluded, in 2005, that significant impacts on the SAC would be likely, and there was doubt as to whether, under the terms of the Habitats Directive, it would be possible to design an acceptable scheme. This in turn raised the prospect that consent for a wider scheme including such a link might not be granted. On 19 September 2005, the applicant's Cabinet resolved to have no NDR link between the A47(w) and the A1067. It therefore did not form part of the adopted route.</p> <p>At its meeting of 16 September 2013 the meeting of the Norfolk County Council</p>

Norwich Northern Distributor Road - Application for Development Consent Order – Document Reference: 5.1
 Section 42 Consultations - Summary of Those With Interest in Land Responses

Consultee	BOR Plot No:	Summary of Response	Category of Response	Regard Given to Response
				<p>resolved to recommend to Cabinet that they submit an application for a DCO in respect of the NDR as proposed (i.e. between the A47 at Postwick and the A1067 near Attlebridge) and to also commission a report on a feasibility study of providing a link across the Wensum Valley from the A1067 to the A47(w). Whilst at its meeting of 7 October 2013 the applicant's Cabinet resolved that a "scoping report on the feasibility of providing a link across the Wensum Valley from the A1067 – A47 be written once consultation work was completed", this study has not been carried out and there is therefore currently no proposal establishing the form any link between the A1067 and A47(w) would take, or indeed whether any such link is feasible. The Transport Assessment for the NDR (Document Ref 5.5.) shows that the NDR can provide substantial benefits without a further link between the A1067 and A47(w) and that the NDR will reduce daily traffic on existing routes between the A1067 and the</p>

		the road, are unlit and the absence of a continuous footpath is very dangerous for pedestrians.		
	NA	<ul style="list-style-type: none"> it is unlikely that priority will be given to improvements on Church Road and Middle Road or that they may be considered for traffic calming. 	Suggested Change	<p>Regard: Improvements would need to be considered and prioritised by Norfolk County Council alongside other requests for highway improvements.</p> <p>Design Change: No</p>
	NA	<ul style="list-style-type: none"> an interesting proposal suggested by villagers would be to shut the access to Church Road/Middle Road from the A47 and it could then become exit only from the village. 	Suggested Change	<p>Regard: One of the reasons for introducing the Middle Road Bridge was as a result of increasing the options available for accessing Gt Plumstead. Providing such a closure would reduce these options.</p> <p>Design Change: No</p>
<p>Ref: IT037</p> <p></p> <p>Fir Covert Road, Taverham</p>	NA	Commented on the need for a new road to the north of the city and the access requirements of the businesses operating from the northern half of Fir Covert Road. However, suggested	On-Line Proposals (K)	<p>Regard: There has been extensive consideration regarding the provision of the roundabout at the Fir Covert Road junction with the NDR. After the April/May/June 2012 consultations the roundabout was relocated to the junction with Fakenham</p>

Norwich Northern Distributor Road - Application for Development Consent Order – Document Reference: 5.1
 Section 42 Consultations - Summary of Those With Interest in Land Responses

Consultee	BOR Plot No:	Summary of Response	Category of Response	Regard Given to Response
		<p>that traffic should be excluded from the southern half of Fir Covert Road by constructing a three-exit roundabout at this junction. Considers the benefits of this suggestion are:</p> <ul style="list-style-type: none"> the reduction of vehicles using Fir Covert Road and its junction with Fakenham Road, particularly as a supermarket is proposed here. easier movements to enter and exit from Taverham Garden Centre and the 2 children's nurseries on this road. reduction in traffic that would be tempted to use unsuitable routes between the A1067 at Taverham and the A47 at Costessey/Easton including 		<p>Road. The February/March 2013 consultations identified support for the roundabout at the Fakenham Road/NDR junction. However, it also identified concerns regarding the closure of Fir Covert Road, particularly by businesses here. Having given regard to these concerns, the NDR proposal was further amended so that it included an additional roundabout at the NDR junction with Fir Covert Road. This was in addition to the roundabout at the Fakenham Road/NDR junction.</p> <p>The applicant considers the provision of a 4 arm roundabout here as the most appropriate solution, particularly as traffic flow on Fir Covert Road is predicted to be similar or lower with the NDR. See Appendix I to the Traffic Forecasting Report (Document Ref 5.6) for forecast traffic flows.</p> <p>Design Change: No</p>

Consultee	BOR Plot No:	Summary of Response	Category of Response	Regard Given to Response
				<p>scenario would not warrant corrective works as it does not have a significant enough accident record.</p> <p>Design Change: No</p>
	NA	<ul style="list-style-type: none"> sections of Hall Lane are narrow and not suitable for large vehicles to pass each other, causing erosion of the verges and danger for any pedestrians trying to use the road to get from properties to Drayton village centre. 	On-Line Proposals (K)	<p>Regard: The introduction of the NDR scheme as proposed will provide a net reduction in traffic compared with a non-NDR scenario. Therefore there will be a future slight net benefit. Whilst discussed at the initial meeting as being necessary, an environmental weight restriction on this section of Hall Lane already exists and is there to limit the numbers of larger vehicles accessing Drayton from Reepham Road via Hall Lane. Some vehicles are still large but will be under the restricted weight. Traffic surveys being undertaken in late November 2013 will highlight how much larger or HGV traffic is using Hall Lane and will inform any future decisions. Further consultation, separate to the NDR scheme would need to be undertaken in order to consider any amendments to the weight restriction.</p>

Norwich Northern Distributor Road - Application for Development Consent Order – Document Reference: 5.1
 Section 42 Consultations - Summary of Those With Interest in Land Responses

Consultee	BOR Plot No:	Summary of Response	Category of Response	Regard Given to Response
				<p>Some improvement to the existing signing to better identify the restriction may be possible but would be separate to the NDR scheme as this is an existing issue.</p> <p>Design Change: No</p>
	NA	<ul style="list-style-type: none"> residents walk down Hall Lane into their village and the proposal will increase the danger for these users. The number, size and speed of vehicles and the lack of a footway exacerbate this. 	On-Line Proposals (K)	<p>Regard: In view of the number of properties on this section of Hall Lane and the fact that the NDR will provide a projected net reduction in traffic on Hall Lane, then it is not for the NDR scheme to resolve this concern. However there may be scope for provision of a simple footpath or 'trod' on the northern verge, which would provide a safer route/refuge for pedestrians to use. This is something that the applicant will consider but as part of a separate programme of local improvements separate to the NDR project (i.e. using Highway Authority powers). Such an improvement would not form part of the NDR scheme.</p> <p>Design Change: No</p>
	NA	<ul style="list-style-type: none"> in addition to Hall Lane, there 	On-Line	<p>Regard: The Reepham Road connection to</p>

Norwich Northern Distributor Road - Application for Development Consent Order – Document Reference: 5.1

Consultee	BOR Plot No:	Summary of Response	Category of Response	Regard Given to Response
		<p>would be negative effects to Reepham Road (between Drayton Lane and Hall Lane) and the junction of Reepham Road/Hall Lane. In particular there are concerns about the speed of traffic on Reepham Road particularly on the bend between Drayton Lane South and Hall Lane. These concerns are increased as a result of the NDR scheme due to the way traffic will leave the NDR and enter Reepham Road to negotiate the bend to then have to turn right at Hall Lane. The amount of right turning traffic at Hall Lane will significantly increase and this will create a new hazard for motorists.</p>	<p>Proposals (K)</p>	<p>the NDR will be designed to current highway design standards and will therefore be safer than the current road. Reepham Road at this location already has a 50mph speed restriction, which would be retained. Accident records do show a range of accidents (slight and serious) occurring at both Drayton Lane and Hall Lane junctions with Reepham Road. Much of the issue relating to these junctions is that they currently consist of a staggered cross-road layout with high levels of traffic crossing Reepham Road. In relation to Drayton Lane, this would be closed as part of the scheme proposals, thereby removing the stagger at this location. In addition the closure of Holly Lane will reduce the currently large amount of traffic crossing Reepham Road on the staggered cross at Hall Lane and simplify turning movements. Whilst it is considered that the Hall Lane junction will operate safely, a further assessment of the junction operation is to be completed as part of ongoing work. An</p>

				<p>additional localised safety audit review will also be completed.</p> <p>Design Change: No</p>
	NA	<ul style="list-style-type: none"> • traffic calming should be considered on Hall Lane south of the junction with Drayton Lane South. 	On-Line Proposals (K)	<p>Regard: Traffic calming on Hall Lane between Drayton village and Drayton Lane has been considered as part of the modelling tests mentioned above. It does show that this has the effect of discouraging through traffic, however the NDR proposals with Hall Lane open and Drayton Lane South closed are more effective at reducing the amount of through traffic at this location. The parish council have raised their concerns about this section of Hall Lane as it has a number of accidents already and one of these was a fatal accident in 2012. It is therefore possible to consider traffic calming, however this would be separate to the NDR scheme and would need to be assessed and funding prioritised by Norfolk County Council alongside other locations across Norfolk.</p>

Norwich Northern Distributor Road - Application for Development Consent Order – Document Reference: 5.1
 Section 42 Consultations - Summary of Those With Interest in Land Responses

Consultee	BOR Plot No:	Summary of Response	Category of Response	Regard Given to Response
				<p>Design Change: No</p>
	NA	<ul style="list-style-type: none"> the closure on Drayton Lane South should be removed because if any road needed closing it is Hall Lane as this has residential properties on it and Drayton Lane South does not. Drayton Lane South would therefore be a safer route, and would enable local residents to use their road (Hall Lane) in safety. 	On-Line Proposals (K)	<p>Regard: Following all of the comparative testing from the modelling and taking account of the points raised, the applicant considers there is no justification for changing the NDR scheme as currently proposed. The scheme remains the most effective way of reducing traffic accessing Drayton from Reepham Road and therefore focuses traffic onto more appropriate routes. Further traffic surveys are being undertaken to establish the scale of any localised issues and will inform the modelling further. At this time however, there are no proposals to amend the NDR scheme as proposed.</p> <p>Design Change: No</p>
<p>Ref: IT052   St George's Street,</p>	NA	Commented that after construction of the road, the estate will be diminished to four lesser areas of land with	Land/Property Issues	<p>Regard: Matter to be addressed through compensation negotiations.</p> <p>Design Change: No</p>

Appendix V

Summary of Key Refinements Made to Proposals

Norwich Northern Distributor Road Application for Development Consent Order Document Reference: 5.1
 Summary of Key Refinements Made to Proposals

Change Ref	Chainage	General Arrangement Sheet No.	Location	Change	Reason for change
1.1	0 to 510	No 1	South west of Fakenham Road Roundabout – area of existing carriageway to be broken out and top soiled.	Area of grassland extended to include area of carriageway to be broken out. Boundary fence line and DCO boundary limits extended to include area.	Area of existing carriageway was shown beyond scheme boundary.
1.2	Not Used	Not Used	Not Used	Not Used	Not Used
1.3	200	No 1	Fakenham Road long lay-by.	Access from the southern end stopped up.	Due to realignment of Fakenham Road.
1.4	650	No 1	Lagoon 1 and 1A – either side of NDR.	Lagoons reduced in size.	Due to minimum infiltration rate used for corresponding depth trial pit as advised by the Environment Agency. As a result of on-going discussions with Environment Agency.
1.5	1100	No 1	National Grid High Pressure Gas Main – crossing NDR.	Diversion of gas main re-aligned. Note diversion still remains an indicative alignment at present as National Grid has yet to design detailed diversion.	To comply with 80m proximity rule.

Norwich Northern Distributor Road Application for Development Consent Order Document Reference: 5.1
 Summary of Key Refinements Made to Proposals

Change Ref	Chainage	General Arrangement Sheet No.	Location	Change	Reason for change
1.6	500	No 1	North of Fakenham Road Roundabout.	Scrubland creation replaced by woodland and small area of woodland creation added.	Excluded from consultation plans.
2.1	Not Used	Not Used	Not Used	Not Used	Not Used
2.2	2390	No 2	Marriotts Way Bridge – crossing NDR.	Area of realigned Marriotts Way Overbridge shown as public open space.	Existing Marriotts Way is the public open space and diverted Marriotts Way over the NDR will remain as public open space into which the bridleways from north and south connect.
2.3	Not Used	Not Used	Not Used	Not Used	Not Used
2.4	1950 to 2390	No 2	West of Marriotts Way Bridge – both sides of NDR.	Indicative badger fence added.	As per the Environmental Mitigation Plan August 2013.
2.5	1650	No 2	Lagoon 2 - North west of Fir Covert Road Roundabout.	Lagoon enlarged in size.	Due to minimum infiltration rate used for corresponding depth trial pit, as advised by the Environment Agency. As a result of on-going discussions with Environment Agency.
2.6	1550	No 2	Temp topsoil storage area - adjacent to Lagoon 2.	Area of temp topsoil storage reduced.	Due to larger Lagoon 2.

Norwich Northern Distributor Road Application for Development Consent Order Document Reference: 5.1
 Summary of Key Refinements Made to Proposals

Change Ref	Chainage	General Arrangement Sheet No.	Location	Change	Reason for change
2.7	1650	No 2	Land around Lagoon 2 - North west of Fir Covert Road Roundabout.	Additional grass creation added.	In correctly shown on consultation plans.
2.8	800 to 1000	No 2	Mid way between Fakenham Road Roundabout and Fir Covert Road Roundabout – north side of NDR.	New private means of access added to area of land.	No access originally provided to land because party interested in purchasing this land post scheme could have accessed it through already owned land.
2.9	1750	No 2	Fir Covert Road Roundabout – northern arm.	Informal equestrian crossing (not signalised) relocated further from roundabout.	To provide better visibility for equestrians.
3.1	2910	No 3	Reepham Road Roundabout – northern arm.	Informal equestrian crossing (not signalised) relocated further from roundabout.	To provide better visibility for equestrians.
3.2	2400 to 2910	No 3	Private means of access between Breck Farm Lane and Reepham Road Roundabout – south side of NDR.	Width of private means of access widened to 4m with 2m verges either side.	As a result of consultations. See Response Ref IT020 in Appendix U of this report.
3.3	3400	No 3	South side of NDR.	Access provided to	To ensure preservation and management

			Lane Roundabout.		of on-going discussions with Environment Agency.
4.7	Not Used	Not Used	Not Used	Not Used	Not Used
4.8	Off Line	No 4	Private means of access adjacent to Drayton Lane – North West of Drayton lane Roundabout	New field access added.	Access to paddock omitted from consultation plans.
4.9	Not Used	Not Used	Not Used	Not Used	Not Used
4.10	Not Used	Not Used	Not Used	Not Used	Not Used
4.11	Off Line	No 4	Holt Road/Drayton Lane Roundabout.	The roundabout was moved within the DCO boundary limits to avoid impact on residual property.	As a result of verbal comments received at exhibition (Section 47 and Section 48 consultations).
4.12	Off Line	No 4	North east of Holt Road/Drayton Lane Roundabout.	Removal of area designed for temporary traffic management, which removes need to effect mature trees and stable block.	Advice from contractor identified that tie-in could be completed by alternative means. As a result of design change consultations. See Ref: DC008.

Norwich Northern Distributor Road Application for Development Consent Order Document Reference: 5.1
 Summary of Key Refinements Made to Proposals

Change Ref	Chainage	General Arrangement Sheet No.	Location	Change	Reason for change
5.1	Off Line	No 5	West of Cromer Road Roundabout North – cycle track between Cromer Road and Holt Road.	Cycle track amended to footway/cycleway.	Shown incorrectly as cycle track on consultation plans.
5.2	Off-Line	No 5	Holt Road – south eastern end at point of closure.	Turning head replaced by combined turning head and field access.	Field access not shown on consultation plans.
5.3	Off Line	No 5	Lagoon 9 – west side of Cromer Road to north of NDR.	Lagoon made deeper.	Due to minimum infiltration rate used for corresponding depth trial pit as advised by the Environment Agency. As a result of on-going discussions with Environment Agency.
5.4	6800	No 5	South west of A140 Cromer Road Junction.	New Lagoon 8A added.	Overland flow assessments highlighted potential flooding of west bound merge lane of junction due to natural flow.
5.5	6800	No 5	Lagoon 8 - south west of A140 Cromer Road Junction.	Lagoon made deeper and larger.	Due to minimum infiltration rate used for corresponding depth trial pit as advised by the Environment Agency. As a result of on-going discussions with Environment Agency.
5.6	Not Used	Not Used	Not Used	Not Used	Not Used

Norwich Northern Distributor Road Application for Development Consent Order Document Reference: 5.1
 Summary of Key Refinements Made to Proposals

Change Ref	Chainage	General Arrangement Sheet No.	Location	Change	Reason for change
5.7	Off Line	No 5	Holly Lane between Cromer Road Junction west bound merge slip road and turning head.	Cycle track changed to private means of access combined with cycle track.	To provide access to new Lagoon 8A.
6.1	Not Used	Not Used	Not Used	Not Used	Not Used
6.2	10050 to 9120	No 6/7	Private means of access between St Faiths Road and Airport Roundabout– south west side of NDR.	Width of private means of access widened to 4m with 2m verges either side.	As a result on-going discussions with the landowner/occupier/agent.
6.3	9120	No 6	South west of Airport Roundabout.	New access provided to airport development site to replace Petans only access shown on consultation plans.	Planning consent for airport development granted in Summer 2013.
6.4	8900	No 6	Lagoon 12 – north side of NDR.	Lagoon reduced in size.	Due to minimum infiltration rate used for corresponding depth trial pit as advised by the Environment Agency. Overland flow reduced following analysis of airport drainage plan As a result of on-going discussions with Environment Agency and Norwich Airport.
6.5	9800	No 6	Lagoon 13 – east side of	Lagoon made deeper and	Due to wider private means of access

 Summary of Key Refinements Made to Proposals

Change Ref	Chainage	General Arrangement Sheet No.	Location	Change	Reason for change
11.9	Off Line	No 11	Link between Plumstead Road Roundabout North and Plumstead Road Roundabout South – east side.	Private means of access adjacent to Lagoon 21 extended.	To provide access to land east of the NDR.
11.10	Off Line	No 11	Plumstead Road south side – west of Broad Lane.	Bridleway extended eastwards.	So that bridleway ends on Broad Lane.
11.11	Off Line	No 11	Plumstead Road through Thorpe End.	Off line scheme proposals added.	Not originally shown on consultation plans but on separate plans.
12.1	24000	No 12	Postwick Hub Junction.	Landscaping proposals added.	Postwick Junction landscape was included in the main exhibition plan but omitted from the General Arrangement Plans.
12.2	Not Used	Not Used	Not Used	Not Used	Not Used
12.3	Not Used	Not Used	Not Used	Not Used	Not Used
12.4	Not Used	Not Used	Not Used	Not Used	Not Used
12.5	19200	No 12	Lagoon 25 – east side of NDR.	Lagoon moved from west side of the NDR to the east side.	As a result of consultation. See Response Ref IT019 and IT044 in Appendix U of this report.

Norwich Northern Distributor Road Application for Development Consent Order Document Reference: 5.1
 Summary of Key Refinements Made to Proposals

Change Ref	Chainage	General Arrangement Sheet No.	Location	Change	Reason for change
12.6	18800	No 12	Lagoon 24 – west side of NDR.	Lagoon increased in size.	Due to minimum infiltration rate used for corresponding depth trial pit as advised by the Environment Agency. As a result of on-going discussions with Environment Agency.
12.7	Not Used	Not Used	Not Used	Not Used	Not Used
12.8	19500 to 19000	No 12	Between Business Park Roundabout and Smees Lane – east side of NDR.	Top soil storage area relocated to land east of NDR and south of Smees Lane.	Request from landowner/occupier. As a result of the relocation of Lagoon 25 (Design Change Ref 12.5).
12.9	Off Line	No 12	Broadland Gate Roundabout.	New field access added from roundabout.	As a result of consultations. See Response Ref IT019 in Appendix U of this report.
12.10	19000 to 19250	No 12	Between Smees Lane and Lagoon 25 – east side of NDR.	New lagoon maintenance access added from south side of Smees Lane. New field access provided from Smees Lane turning head east of NDR.	As a result of providing Lagoon 25 on east side of NDR. As a result of on-going discussions with the landowner/occupier/agent.
12.11	20050	No 12	East of Postwick North East Roundabout.	New field access added from private means of	Access omitted from consultation now added. As a result of consultations.

Dear Sir or Madam

**Norwich Northern Distributor Road (NDR)
Further Consultation on Design Change Proposals Following Public Consultation
between July and September 2013**

Norfolk County Council recently consulted you under Section 42 of the Planning Act 2008 on its proposals for the abovementioned NDR project. As part of this consultation you were sent the following documents associated with the project:

- the scheme information document,
- the non-technical summary to the Preliminary Environmental Information Report,
- the non-technical note on Transport Modelling,
- a CD containing PDFs of these documents, the appendices to the scheme information document and a full copy of the Preliminary Environmental Information Report.

These documents were also available to view online and in various locations around the route of the proposed NDR.

Following the receipt of consultation responses and ongoing review of the detailed design of the proposed NDR by Norfolk County Council, a number of minor design amendments are proposed from those shown as part of the previous formal consultation process. The Council is therefore undertaking a further consultation with those parties directly affected by these changes.

The new or altered proposals which affect your property/interests are shown on the attached schedule and plan(s).

The deadline for receipt of your response to this additional consultation is **13 November 2013**.

Any response to this consultation should be made by:

- writing to:- Norwich Northern Distributor Road, Norfolk County Council, Martineau Lane, Norwich, NR1 2DH
- e-mailing:- norwich.transport@norfolk.gov.uk

Responses should include an indication of who is making the response and their correspondence address. Responses will be summarised in a consultation report that will form part of the application documents for the Development Consent Order. Please note that responses may be published. Personal details will be held securely and used solely for purposes in connection with the pre-application consultations, development consent application process, and further development of the scheme. Personal details will not be disclosed to any third parties although the County Council may be required to provide certain information if specifically requested by the Planning Inspectorate or as part of a formal Freedom of Information Act request.

Please note that the previous consultation materials are still available online (www.norfolk.gov.uk/tfn) should you wish to view them again.

Yours sincerely

A handwritten signature in black ink, appearing to read 'Gavin Broad', written in a cursive style.

Gavin Broad – Project Engineer

Dear Sir or Madam

**Norwich Northern Distributor Road (NDR)
Further Consultation on Design Change Proposals Following Public Consultation
between July and September 2013**

Norfolk County Council recently consulted you under Section 42 of the Planning Act 2008 on its proposals for the abovementioned NDR project. As part of this consultation you were sent the following documents associated with the project:

- the scheme information document,
- the non-technical summary to the Preliminary Environmental Information Report,
- the non-technical note on Transport Modelling,
- a CD containing PDFs of these documents, the appendices to the scheme information document and a full copy of the Preliminary Environmental Information Report.

These documents were also available to view online and in various locations around the route of the proposed NDR.

Following the receipt of consultation responses and ongoing review of the detailed design of the proposed NDR by Norfolk County Council, a number of minor design amendments are proposed from those shown as part of the previous formal consultation process. The Council is therefore undertaking a further consultation with those parties directly affected by these changes.

The new or altered proposals which affect your property/interests are shown on the attached schedule and plan(s).

The deadline for receipt of your response to this additional consultation is **14 November 2013**.

Any response to this consultation should be made by:

- writing to:- Norwich Northern Distributor Road, Norfolk County Council, Martineau Lane, Norwich, NR1 2DH
- e-mailing:- norwich.transport@norfolk.gov.uk

Responses should include an indication of who is making the response and their correspondence address. Responses will be summarised in a consultation report that will form part of the application documents for the Development Consent Order. Please note that responses may be published. Personal details will be held securely and used solely for purposes in connection with the pre-application consultations, development consent application process, and further development of the scheme. Personal details will not be disclosed to any third parties although the County Council may be required to provide certain information if specifically requested by the Planning Inspectorate or as part of a formal Freedom of Information Act request.

Please note that the previous consultation materials are still available online (www.norfolk.gov.uk/tfn) should you wish to view them again.

Yours sincerely

A handwritten signature in black ink, appearing to read 'Gavin Broad', with a stylized flourish at the end.

Dear Sir or Madam

**Norwich Northern Distributor Road
Formal Consultation under Section 42 of the Planning Act 2008**

Norfolk County Council is proposing to construct the Norwich Northern Distributor Road (NDR). The proposed NDR comprises a 20.4km primarily dual carriageway road around north Norwich linking the A1067 Fakenham Road near Attlebridge to the A47 Trunk Road at Postwick. It includes roundabout junctions with the main radial routes (running into and out of Norwich on the north side of the city) and grade-separated interchanges with the A140 Cromer Road and the A47 at Postwick.

The proposed NDR falls within the definition of a 'nationally significant infrastructure project' under the Planning Act 2008 (2008 Act). In accordance with the 2008 Act, the Council is required to submit an application for a Development Consent Order (DCO application) to construct, operate and maintain the NDR, including the Postwick Hub Junction. Any Development Consent Order would include provisions relating to development consent, compulsory acquisition of land, road closures, new roads and other highway related matters.

Between July and September 2013 Norfolk County Council undertook consultations under Section 42 of the Planning Act 2008 and Regulation 10 of the Infrastructure Planning (Environmental Impact Assessment) Regulations 2009 on the abovementioned project. However further investigations have identified additional consultees we are therefore writing to consult you under Section 42 of the 2008 Act on the Council's proposals

Continued...

For the purposes of this formal pre-application consultation, a Preliminary Environmental Information Report (PEI Report) has been prepared in accordance with Regulations 2 and 10 of the Infrastructure Planning (Environmental Impact Assessment) Regulations 2009. The PEI Report details the current proposals, and explains the methods and preliminary findings of our assessment of the environmental impacts of the proposals.

A non-technical summary of this PEI Report has been prepared and forms part of the consultation documents for this formal consultation, along with a scheme information document and this covering letter. A full version of the PEI Report is available from Norfolk County Council's specific project website www.norfolk.gov.uk/tfn. The full version of the PEI Report is also included on the enclosed CD, together with the appendices to the scheme information document.

A separate non-technical note on transport modelling has been provided in order to describe the process that has been undertaken to produce the provisional daily traffic flow information supplied in the scheme information document.

Therefore, in accordance with Section 42 of the 2008 Act and the Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2009 we enclose with this letter the following documents:

- the scheme information document,
- the non-technical summary to the PEI Report;
- the non-technical note on Transport Modelling,
- a CD containing pdfs of these documents, the appendices to the scheme information document and a full copy of the PEI Report (details of the contents of the CD are attached to this letter).

Please note that following the receipt of consultation responses and ongoing review of the detailed design of the proposed NDR by Norfolk County Council, a number of minor design amendments are proposed from those shown as part of the July to September 2013 formal consultation process.

The new or altered proposals which affect your property/interests are shown on the attached schedule and plan(s). The Council is therefore also undertaking a consultation with those parties directly affected by these changes.

Should you wish to respond to either the original consultation or the design amendments, the deadline for receipt of your response is «Dead_Line_Date» The original consultation deadline detailed in the above documents is stated as 20 September. However, this has been extended to the «Dead_Line_Date» to ensure that you have the minimum statutory 28 days (from receipt of the consultation documents) to provide a consultation response.

Any response to this consultation should be made by:

- writing to:- Norwich Northern Distributor Road, Norfolk County Council, Martineau Lane, Norwich, NR1 2DH
- e-mailing:- norwich.transport@norfolk.gov.uk

Responses should include an indication of who is making the response and their correspondence address. Responses will be summarised in a consultation report that will form part of the application documents for the Development Consent Order. Please note that responses may be published. Personal details will be held securely and used solely for purposes in connection with the pre-application consultations, development consent application process, and further development of the scheme. Personal details will not be disclosed to any third parties although the County Council may be required to provide certain information if specifically requested as part of a formal Freedom of Information Act request.

Attached to this letter is a list of documents and drawings contained on the enclosed CD. Electronic copies of these documents can be viewed free of charge by visiting www.norfolk.gov.uk/tfn.

Paper copies and CD copies of the consultation documents and the full version of the PEI Report are available on request to the project postal address or e-mail address set out above. For paper copies a charge of £10 for each drawing or £50 for each document will be made.

The Council expects to submit the DCO application for examination by Secretary of State via the Planning Inspectorate in Autumn 2013. A full Environmental Impact Assessment will be submitted as part of the DCO application. If the application is accepted, there will be an opportunity to submit representations on the application to the Planning Inspectorate.

Should you have any queries on the consultation documents or any other elements of the NDR proposal please do not hesitate to contact me by telephoning 01603 224279 or e-mailing norwich.transport@norfolk.gov.uk.

Yours faithfully

Gavin Broad
Project Engineer

		<p>Regulations.</p> <p>Commented that the proposals replace a perfectly good road and there are other viable options which would have less impact on homeowners around this proposed development.</p>	<p>Other Issues</p> <p>Comments regarding other proposals – Off-Line Proposals</p>	<p>Regard: The proposed changes to this junction were considered following comments from the previous April/May/June 2012 consultations, which identified the existing junction as an issue. By diverting Green Lane West further south west it joins Wroxham Road at a location where visibility is improved.</p> <p>Further Design Change: No</p>
	NA	<p>Requested information why alternative options have not been considered, namely:</p> <ul style="list-style-type: none"> • opening the junction and installing a traffic light system to control the traffic flow and speed. • install a road from Muck Lane junction and taking the road into the north end of the Industrial Estate thus taking away heavy volumes of traffic from Green Lane West which are bound for the industrial estate. 	<p>Comments regarding other proposals – Off-Line Proposals</p>	<p>Regard: See comments above, the proposals were developed as the most appropriate option to address visibility issues at the existing junction.</p> <p>Further Design Change: No</p>

Norwich Northern Distributor Road - Application for Development Consent Order – Document Reference 5.1
Design Change Consultations - Summary of Responses

Consultee	BOR Plot No:	Summary of Response	Category of Response	Regard Given to Response
	NA	Suggested that as the junction is only moving meters from the present one this will only create another accident hot spot. The site being proposed has a blind curving bend which will result in higher speed accidents and not the reduction that is being looked for.	Comments regarding other proposals – Off-Line Proposals	<p>Regard: The junction would be moved to a location where visibility from the side road would be improved. The proposals have been subject to a Stage 1 Safety Audit.</p> <p>Further Design Change: No</p>
	NA	Commented that the reason for purchasing the property was for its south facing aspect with views of open countryside and the house has been designed around this feature. In addition the field provided privacy, fresh air and peace/quiet. The proposed road will have a detrimental impact on these issues and on the quality of life.	Comments regarding other proposals – Off-Line Proposals	<p>Regard: Assessments of Noise and Air Quality are contained in Volume 1 Chapter 4 and 11 of the Environmental Statement (Document Ref 6.1).</p> <p>Further Design Change: No</p>
	NA	Commented that the proposed road is doing little more than putting the property on an island surrounded by roads. The constant north to north westerly wind is only going to carry noise to the property.	Comments regarding other proposals – Off-Line Proposals	<p>Regard: Assessments of Noise and Air Quality are contained in Volume 1 Chapter 4 and 11 of the Environmental Statement (Document Ref 6.1).</p> <p>Further Design Change: No</p>

Norwich Northern Distributor Road - Application for Development Consent Order – Document Reference 5.1
Design Change Consultations - Summary of Responses

Consultee	BOR Plot No:	Summary of Response	Category of Response	Regard Given to Response
	NA	<p>Commented that the constant stream of traffic and queues at the junction will cause an unacceptable rise in pollution and with the north to north westerly wind it can only result in the families health being put at risk. Commented that there is no way to guarantee well being in this matter or estimating the density of the pollution.</p>	<p>Comments regarding other proposals – Off-Line Proposals</p>	<p>Regard: Assessments of Noise and Air Quality are contained in Volume 1 Chapter 4 and 11 of the Environmental Statement (Document Ref 6.1). Further Design Change: No</p>
	NA	<p>Noted that the property is no longer as shown on the drawings received as it has been extended. If a vehicle was to leave the road to the north of the junction there would be a very high possibility it would arrive in the property grounds or even impale itself into the end of the house which happens to be a bedroom.</p>	<p>Comments regarding other proposals – Off-Line Proposals</p>	<p>Regard: Drawings were based the latest mapping information available to the applicant at the time of production. Further Design Change: No</p>
	NA	<p>Commented that the proposal will have a major impact on the environment of the farmland itself. The location chosen is a natural soak away for the more elevated land around the area. It also has</p>	<p>Comments regarding other proposals – Off Line</p>	<p>Regard: The loss of productive agricultural land and commitments regarding the minimisation of impacts to soils are detailed in Volume 1 Chapter 13 and Volume 1 Chapter 9 of the Environmental Statement (Document Ref</p>

Dear Ms Haddrell

**NORWICH NORTHERN DISTRIBUTOR ROAD (NDR)
REGULATION 6 NOTIFICATION**

Further to our meeting on 22 January 2013, and subsequent Preliminary Notification, I can confirm that the proposals for the NDR constitute Environmental Impact Assessment (EIA) development under Schedule 1 section 7(c) of the Infrastructure Planning (Environmental Impact Assessment) Regulations 2009.

In accordance with Regulation 6(1)(b) of the aforementioned regulations, an Environmental Statement in respect of the proposed development will be submitted with the application for a Development Consent Order.

Yours sincerely

David Allfrey
Major Projects Manager, Norfolk County Council

This document is issued for the party which commissioned it and for specific purposes connected with the above-captioned project only. It should not be relied upon by any other party or used for any other purpose.

We accept no responsibility for the consequences of this document being relied upon by any other party, or being used for any other purpose, or containing any error or omission which is due to an error or omission in data supplied to us by other parties.

This document is submitted in relation to the application for a proposed development by Norfolk County Council to the Planning Inspectorate, under the Planning Act 2008.

The application is for the Norfolk County Council (Norwich Northern Distributor Road (A1067 to A47(T))) Order, to grant development consent for the construction of a new highway running west-east between the A1067 Fakenham Road and the A47 Trunk Road at Postwick, including improvements to the existing highway network to the north and north east of Norwich.

This document comprises part of the application documents and relates to Regulation 5(2)(e) of the Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2009.

1. Executive Summary

- 1.1.1 Mott MacDonald was commissioned by Norfolk County Council to carry out a Flood Risk Assessment for the proposed Norwich Northern Distributor Road. This report provides the outcome of the assessment which follows the procedures outlined in the National Planning Policy Framework (NPPF) and the accompanying NPPF Technical Guidance (NPPFTG).
- 1.1.2 At no point does the proposed route of the NDR intersect any active watercourse. The route is largely located in Flood Zone 1 where there is little or no annual probability of fluvial or tidal flooding, and thus is considered to pass the Sequential Test. However, the road alignment crosses the catchment of Dobbs Beck near Rackheath where available surface water mapping indicates some pluvial flood risk. The depth, extent and duration of any flooding in this area is currently minimal, and the road will be built above the maximum flood levels and therefore removed from flood risk. The proposals for the new road are classified as 'Essential Infrastructure' by Table 2 of NPPFTG, and as such are permitted in Flood Zones 1 and 2.
- 1.1.3 In compliance with the NPPF, the highway drainage for the NDR has been designed in line with sustainable drainage system (SuDS) principles to restrict runoff to Greenfield discharge rates. Therefore flood risk due to surface water runoff will be mitigated to acceptable levels.
- 1.1.4 In terms of overland flow, the proposed route will bisect 43 natural catchments. Section 4.1.4 assesses the potential runoff from these catchments, as well as the resultant flood extents where natural drainage paths will be severed. At no point do these flood extents indicate any flooding to residential property.
- 1.1.5 Given the depth of the groundwater table beneath the preliminary road levels, flood risk to the NDR arising from groundwater is likely to be minimal. Any residual risks, due to climate change, for example, would be easily managed by the proposed surface water drainage system.
- 1.1.6 With the implementation of the recommended flood risk management and drainage proposals included in the Scheme and DCO, as set out in Section 4, the NDR proposals will have no significant impact upon the local flooding regime, neither will they pose any increased flood risk to neighbouring residential properties or infrastructure.

2. Introduction

- 2.1.1 Mott MacDonald has been commissioned by Norfolk County Council to carry out a Flood Risk Assessment (FRA) to support the planning application and Environmental Impact Assessment (EIA) for the proposed Norwich Northern Distributor Road scheme (NDR). This FRA has been produced to support the planning application for the proposed (NDR). In the FRA the term "NDR" is used interchangeably with "the proposed NDR", "the proposed Scheme" and "Scheme".
- 2.1.2 The Scheme (the Norwich Northern Distributor Road, known as the NDR) is a dual carriageway all-purpose strategic distributor road, which would link the A1067 Fakenham Road, near Attlebridge to the A47 Trunk Road (T) at Postwick. This will be over a length of approximately 20.4km. A full description of the NDR can be found in in the Scheme Description within Chapter 2 : Volume 1 of the Environmental Statement. See also General Arrangement Plans within Appendix 1 : Volume 1 of the Environmental Statement. Figure 2.1 shows the general location of the proposed Scheme and offline junction improvements. Figure 1.1 shows the general location of the proposed Scheme and offline junction improvements.
- 2.1.3 This assessment has been carried out in accordance with the general requirements of the National Planning Policy Framework (NPPF) 2010 and the accompanying Technical Guidance (NPPFTG) and in compliance with the recent Flood & Water Management Act 2010. The FRA assesses the risk of flooding to the proposed Scheme, the possible effect of the development on flood risk elsewhere and makes allowances for increased flows due to climate change. Fluvial, groundwater, surface water and drainage aspects of flood risks have all been considered in this study. The scale and nature of the FRA is considered appropriate for the proposed Scheme.
- 2.1.4 This FRA has been informed by the Strategic Flood Risk Assessment (SFRA) Stages 1 and 2 and Broadland Rivers CFMP undertaken for the region and the North East Norwich Water Cycle Study (WCS) for the Rackheath area.

3. Background Information

3.1 Proposed Scheme

- 3.1.1 The Scheme (the Norwich Northern Distributor Road, known as the NDR) is a dual carriageway all-purpose strategic distributor road, which would link the A1067 Fakenham Road, near Attlebridge to the A47 Trunk Road (T) at Postwick. This will be over a length of approximately 20.4km. A full description of the NDR can be found in in the Scheme Description within Chapter 2 : Volume 1 of the Environmental Statement. See also General Arrangement Plans within Appendix 1 : Volume 1 of the Environmental Statement. The entire length of the proposed NDR will be served by SuDS. This system will utilise a combination of swales, wetlands and attenuation lagoons to ensure that the scheme causes minimal impact to local water quality and flood risk. Runoff from the carriageway will be conveyed via shallow, longitudinal grassed swales approximately 3m wide by 0.2m deep. However, at junctions and roundabouts a standard network of kerbs and gullies will drain surface water runoff from the roadway. The swales and standard drainage networks will discharge to a primary lined lagoon, with the purpose of containing accidental spillage from traffic accidents, before discharging to a secondary attenuation lagoon. No primary lagoon is proposed at attenuation lagoons serving to contain overland flows only.
- 3.1.2 A detailed engineering layout and associated Sustainable Drainage System (SuDS) design of the proposed Scheme is shown in Appendix A (Drawing No. R1C093-R1-5064 to 5087, sheets 1 to 12). As part of the Development Consent Order (DCO) planning application (which this FRA supports), and for reasons unrelated to flood risk, the NDR works could potentially deviate from the current proposed elevations by up to 0.25m higher (earthworks, bunds and banks) or lower (carriageway and adjacent verges). The detailed design of the roundabouts could result in a variation in levels of up to 0.5m higher or lower than the current design. This has been considered within this assessment in relation to groundwater and pluvial flood risk.
- 3.1.3 Three offline road junction improvements are required to support the proposed NDR at Green Lane West, Plumstead Road East and Crostwick Lane. Aerial plans showing the engineering design are provided in Appendix A.
- 3.1.4 In terms of flood risk, the proposed development is classified as 'Essential Infrastructure' as per Table 2 of NPPF Technical Guidance. With reference to

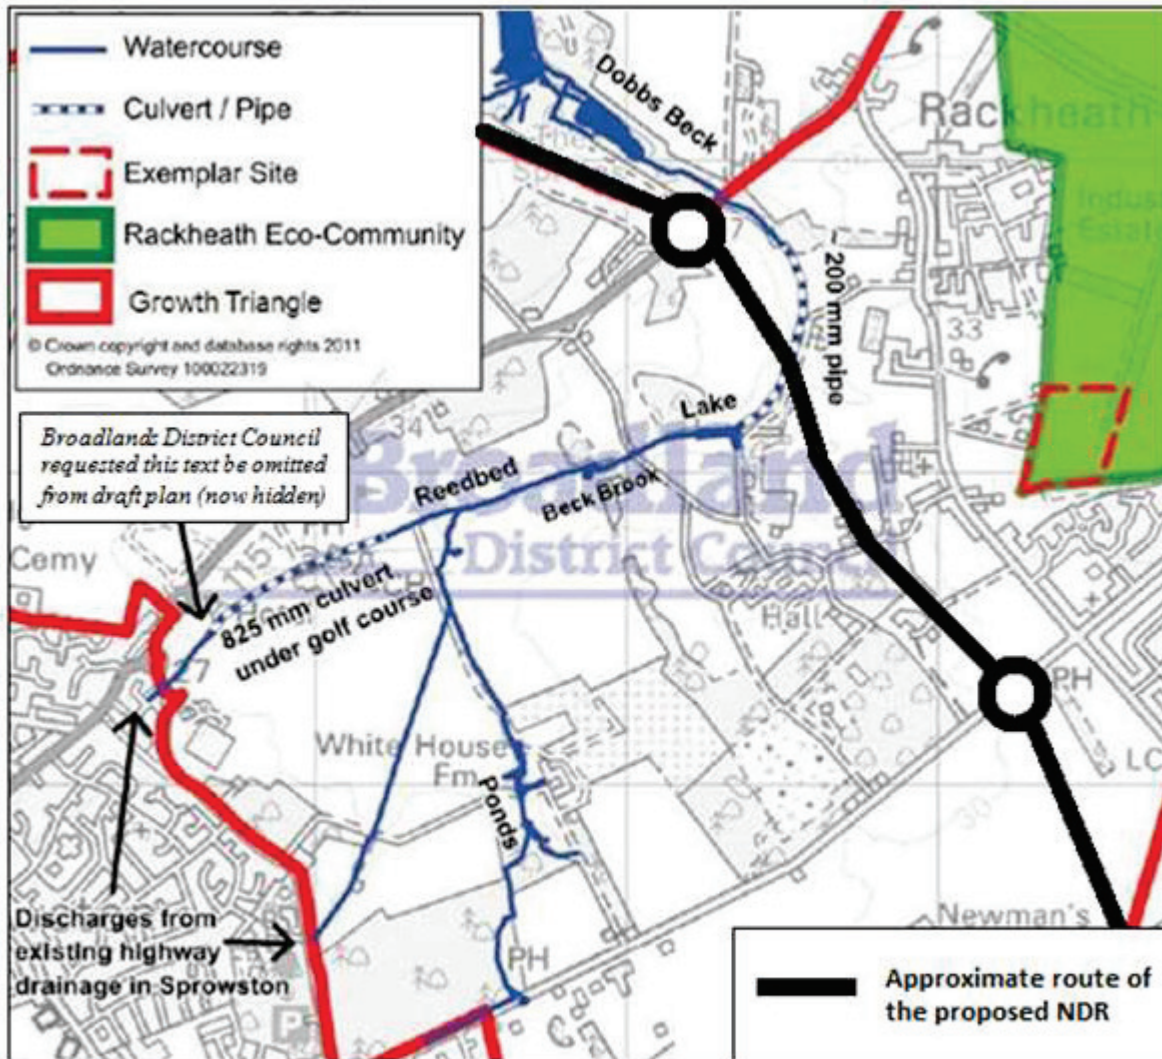

Table 3 of the NPPF Technical Guidance, developments within this classification are appropriate within Flood Zones 1 and 2 but are required to pass the Exception Test and remain operational during times of flood if they are to be located within Flood Zone 3. All development is still subject to the Sequential Test (refer to Section 4.1.2 for further information).

3.2 Existing site conditions and features

Surface water

- 3.2.1 The proposed NDR will cross three river catchments: the River Wensum; the River Yare; and the River Bure. However, at no point would the NDR route cross any active watercourse. The River Wensum to the west of the NDR study area flows southwards through Norwich to meet the River Yare. The River Yare is located over 500m away from the Postwick Hub Junction at the eastern end of the route. The River Bure is located to the North of the NDR, but several tributaries in the vicinity of the NDR drain to the River Bure including Horsford Brook and Spixworth Beck.
- 3.2.2 The junction improvement at Crostwick Lane is approximately 850m south of Spixworth Brook and 1.35km west of Spixworth Beck. The improvements at the Green Lane West junction are located approximately 490m north-east of Dobbs Beck. Plumstead Road East junction improvements are within 1.8km of Witton Run, which is a tributary of the River Yare.
- 3.2.3 The NDR crosses the catchment of Beck Brook which continues as Dobbs Beck immediately south of Wroxham Road. This is a tributary of Spixworth Beck. Figure 3.1 shows the location of Beck Brook and associated drainage features. According to the draft North East Norwich WCS, the NDR crosses the catchment of Beck Brook at the point where it flows underground through a 200mm (approx.) diameter pipe connecting the 'Lake' (also known as the 'Dry Lake') to a ditch south of Wroxham Road. Water primarily leaves the Lake via infiltration to ground, and any overflow is via this buried pipe outfalling to the ditch. Flows in this ditch then pass through a 200 mm (approx.) diameter pipe, under Wroxham Road to the Dobbs Beck watercourse. Dobbs Beck is fed by a number of springs and surrounding field drains in the area.

Figure 3.1: Dobbs Beck and associated drainage features (Source: Figure 4-6 extracted from the draft North East Norwich WCS provided by Broadland District Council (June 2013))

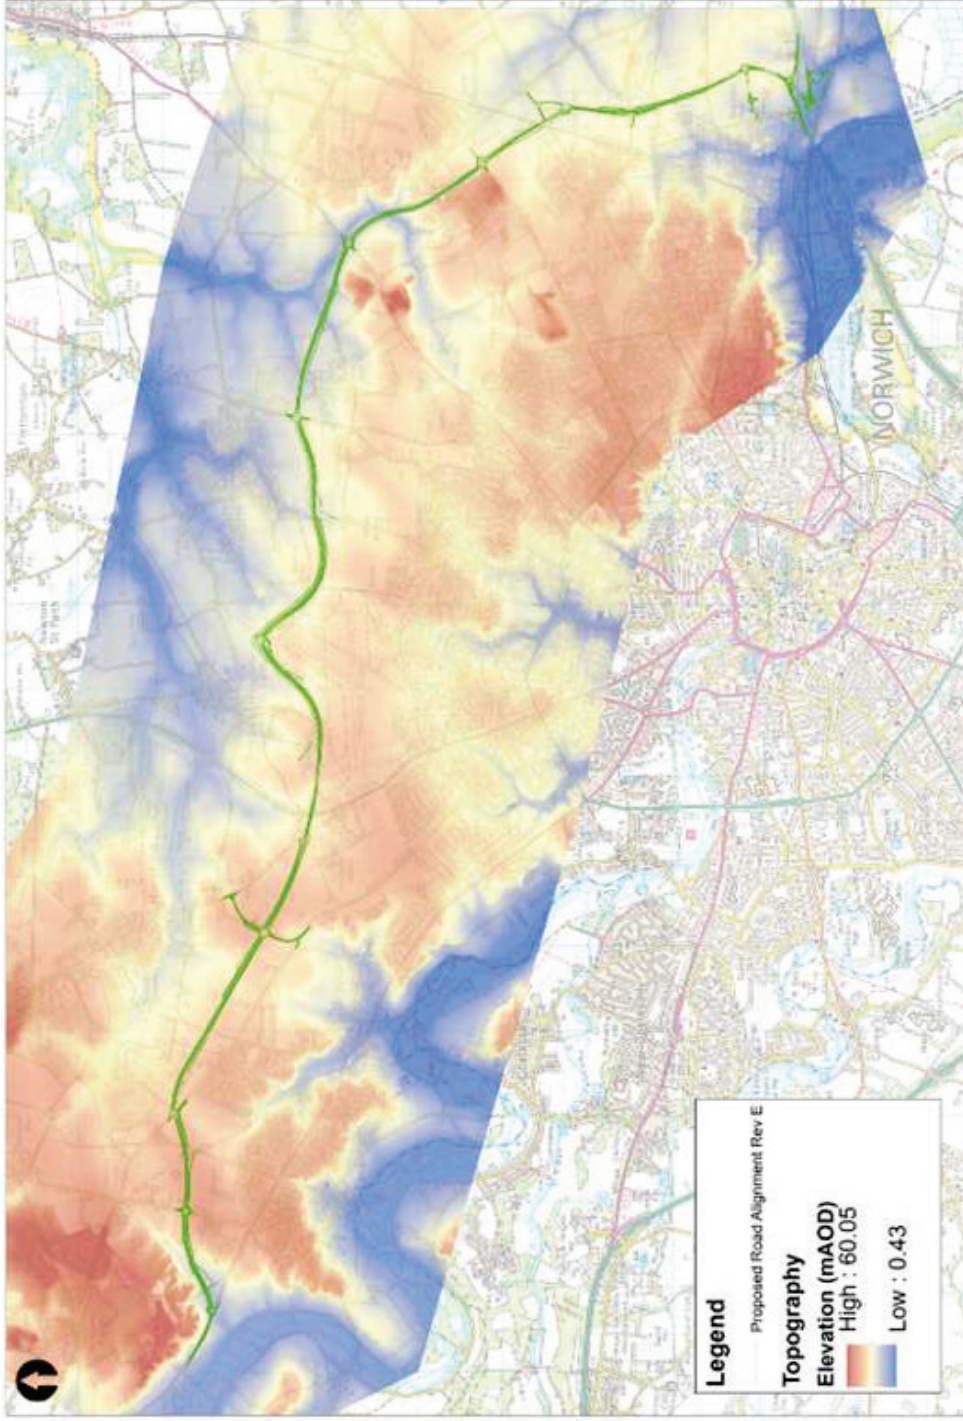

3.2.4 A drainage survey of this area was undertaken by Birse in November 2012. A survey of the 200mm pipe between the Lake and Dobbs Beck showed it to be redundant, with sections no longer functioning to convey surface water between these locations.

3.3 Groundwater

- 3.3.1 The ground along the proposed alignment of the NDR is largely underlain by highly permeable glacial sands and tills draining to the Upper Chalk and Norwich Crag formation. These aquifers support the base flow of the River Wensum, River Yare and River Bure, and their tributaries the River Tud and Horsford Brook. Borehole monitoring since 2007 has assessed groundwater levels on a quarterly basis. This data has been used to inform the assessment of groundwater flood risk in Section 4.1.5. The results of these investigations suggest that the road level is above the maximum groundwater levels along its entire length. However, there is evidence to suggest some minor perched water in lower permeability formations in the higher ground away from the valley near Rackheath.
- 3.3.2 The proposed alignment of the NDR is located on the relatively higher ground of the glacial Norwich Plateau. This is demonstrated in Figure 3.2 which shows a Digital Terrain Model (DTM) for the area. This DTM was constructed using NextMap Data for the purposes of this assessment. In the vicinity of the proposed NDR, the maximum terrain elevation is 62.5 metres above ordnance datum (mAOD) near the Sand and Gravel Pits in Deighton Hills to the far western extent of the proposed route (road chainage 0 as per the latest design drawing shown in Appendix A). The lowest terrain elevation is 9.5mAOD in the vicinity of The Springs to the west of Rackheath (road chainage 13,200 to 14,100).
- 3.3.3 The vertical alignment of the proposed Scheme varies along its route. The maximum elevation which the road will cross is approximately 43 mAOD north of Taverham (road chainage 1,400 to 3,000). The lowest elevation crossed by the road will be 17.9 mAOD near The Springs at chainage 13,300.
- 3.3.4 The regional hydrogeological map, produced by the British Geological Survey (BGS, 1976) provides groundwater level contours for the areas of the three offline junction improvements. Ground elevation at Crostwick Lane is approximately 20mAOD, located along a 5 mAOD groundwater level contour. At Green Lane West and Plumstead Road East ground elevation is approximately 30mAOD, with predicted groundwater levels of 5mAOD and 10mAOD respectively.
- 3.3.5 The vertical alignment of the proposed offline junction improvements will be designed to follow the existing road elevation at Crostwick Lane and Plumstead Road East. Road elevation for the new junction at Green Lane

West is likely to be at or above the existing ground elevation, with matching road elevations where it connects to Green Lane West and Wroxham Road. The BGS groundwater level contours above suggest that the proposed road levels would range between 15 and 25m above the groundwater table, therefore there is unlikely to be groundwater flooding issues in this location. Further groundwater level monitoring would be required to inform the final detailed design to ensure there is no risk of groundwater flooding.

Figure 3.2: Topography

4. Definition of the Flood Hazard and Probability

4.1 The potential sources of flooding

4.1.1 The key potential sources of flooding include:

- Fluvial flooding;
- Surface water;
- Overland flooding; and
- Groundwater flooding.

4.1.2 Overloading of local sewers has been ruled out of this assessment as the proposed route of the NDR follows an alignment which has no significant prior development. Similarly, flooding from artificial sources has been excluded given that there are no known reservoirs, lakes or canals in the vicinity which could impact, or be impacted by the NDR route.

4.1.3 The following outlines the flooding mechanisms for the potential sources of flooding identified above.

Fluvial and tidal flood risk

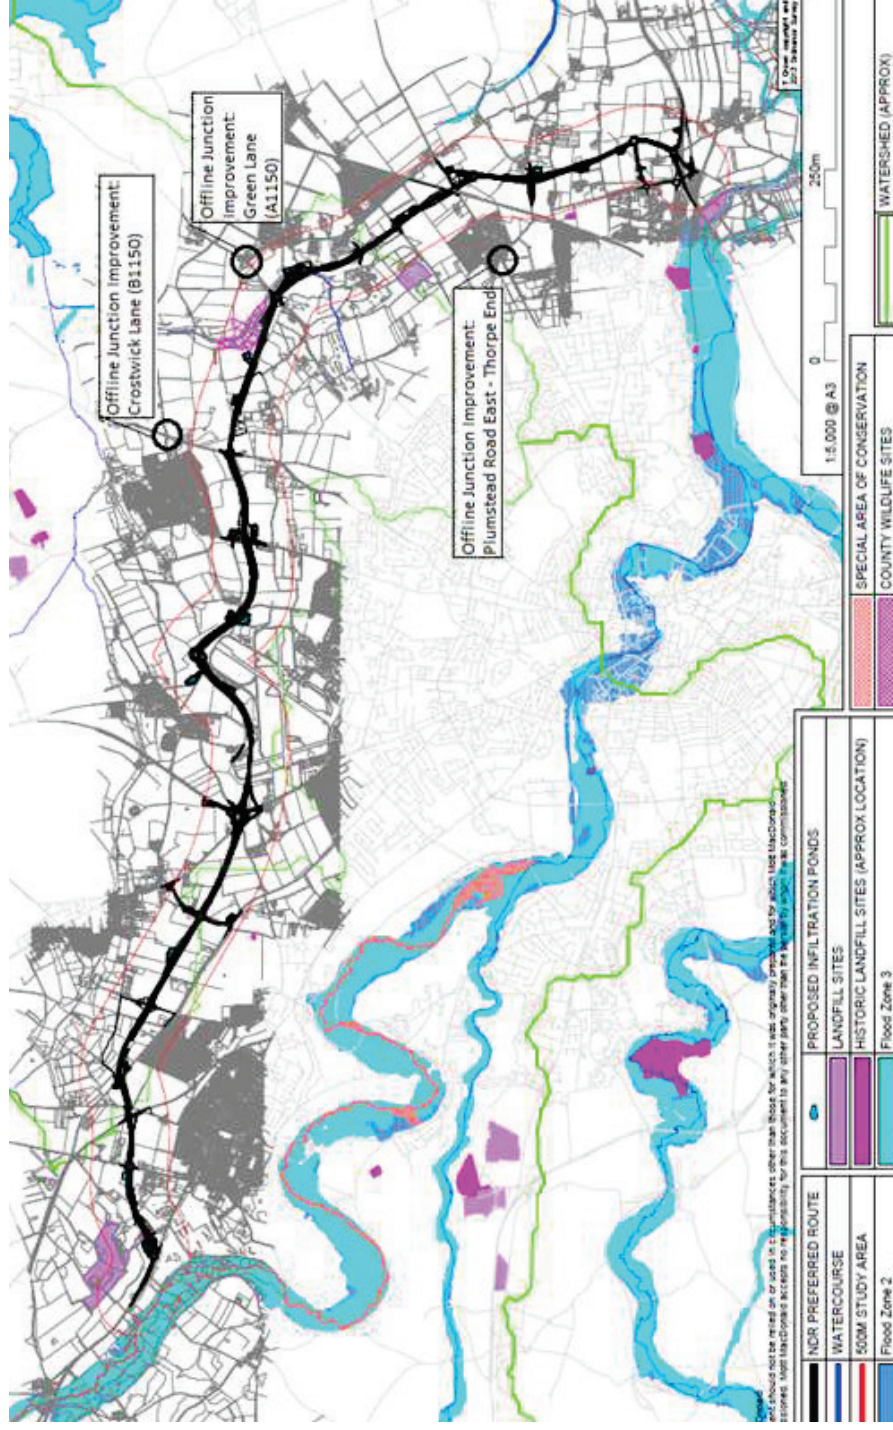

4.1.4 The EA publishes floodplain extents for all significant watercourses throughout England and Wales. These extents are available to the public via the internet and are the primary source of publicly available flood risk information. The Flood Zone Map for the area of interest is shown in Figure 4.1 and in Appendix B. It should be noted that the boundaries given on the flood maps are only indicative and do not take into account any man-made structures such as railway embankments and roads or flood defences. This is an important issue as in many places the influence of man-made structures (particularly flood defences) can substantially reduce the area likely to be affected by flooding.

4.1.5 The EA define three Flood Zones indicating the level of risk from river and tidal flooding.

- Flood Zone 1 (Low Risk): less than 0.1 % annual probability of flooding from rivers or the sea in any given year (less than a 1 in 1000 annual probability of flooding).

- Flood Zone 2 (Medium Risk): greater than 0.1 % but less than 1% annual probability of flooding from rivers or less than 0.5% annual probability of flooding from the sea in any given year (greater than a 1 in 1000 but less than 1 in 100 (1 in 200 from the sea) annual probability of flooding).
- Flood Zone 3 (High Risk): greater than 1 % annual probability of flooding from rivers (a 1 in 100 annual probability of flooding) or 0.5% annual probability of flooding from the sea in any given year (a 1 in 200 annual probability of flooding).

Figure 4.1: Flood Zone Map (Environment Agency 2013).

- 4.1.6 The EA flood map (Figure 4.1) indicates that the entire Scheme and the offline junction improvements are located in Flood Zone 1 and as such has less than 0.1 per cent annual probability of flooding. The Scheme is not located within an area likely to be affected by coastal flooding. Extreme tidal and surge events may cause some tide-locking of the River Yare raising water levels in the channel inland up to Norwich. However, the eastern end of the NDR (hereafter referred to as 'Postwick Hub') is over 5 m above the predicted levels for the extreme surge events on the River Yare, and therefore is not at risk from tidal flooding.
- 4.1.7 NPPF states that climate change may have a significant impact on peak river flows, peak rainfall intensity and sea levels in the future, increasing by up to 20%, 30% and 1.2m (NPPFTG Table 4) respectively by 2115. The Strategic Flood Risk Assessment (SFRA) for Greater Norwich (2008) indicates that at no point does any part of the Scheme intercept the predicted levels for the future fluvial or tidal 1% Annual Exceedance Probability (AEP) or extreme 0.1% AEP events.
- 4.1.8 Analysis of the flood maps and flood level tables (Figure 4.1 and Appendix B) shows that even with the predicted increase in flows and levels due to future climate change, fluvial and tidal flood risk to the Scheme remains low (Flood Zone 1). Therefore, flood risk to the Scheme from river, coastal and tidal flooding is minimal, both now and in the future.
- 4.1.9 Historic flooding reports from the EA also suggest there is little fluvial or tidal flood risk to the NDR. The nearest area of historic flooding (see Appendix B) is at Attlebridge which was flooded in 1993 along the River Wensum, however the flood extent boundaries are more than 200m from the western end of the Scheme, along Fakenham Road.

Sequential test

- 4.1.10 NPPF requires the application of a risk-based approach to determine land uses that are compatible with the level of flood risk at the proposed scheme. The purpose of the sequential test is to ensure that there are no other reasonably available sites in areas with a lower probability of flooding that would be appropriate to the type of development or land use proposed. Appropriate development should be directed towards Flood Zone 1 where at all possible, and then to Flood Zone 2 and Flood Zone 3 respectively.
- 4.1.11 Table 2 of NPPFTG identifies and classifies the vulnerability of each type of development. under the following five flood risk vulnerability classes;

- Essential Infrastructure
- Highly vulnerable
- More vulnerable
- Less vulnerable
- Water-compatible development

4.1.12 The proposed road and junctions are considered as “Essential Infrastructure” according to NPPF guidance. Table 3 of NPPFTG considers “Essential Infrastructure” as appropriate in Flood Zone 1 (less than 1 in 1000 annual probability of river or sea flooding).

4.1.13 The entire Proposed Development is located in the zone of lowest flood risk (Flood Zone 1) and therefore, is considered to satisfy the sequential test of the NPPF.

Surface water flood risk from the proposed road

4.1.14 The NDR will reduce the permeability of an area of approximately 630 km², of which a large proportion will be tarmac, generating 80-85% surface water runoff. Without mitigation this has the potential to alter the fluvial and groundwater regimes, as well as water quality in the area.

4.1.15 There are no known records of surface water flooding from Norfolk County Council, and no Highways Agency records of any known surface water issues along the proposed route or within its immediate vicinity. However, the SFRA suggests surface water flooding may be a significant issue in some places. The lack of historic evidence may be due to the nature of flooding which typically occurs on agricultural land; often being short and shallow in character which commonly means that it goes unreported.

4.1.16 The EA’s Flood Map for Surface Water (FMfSW) give an indication of the broad areas likely to be at risk of surface water flooding, i.e. areas where surface water would be expected to flow or pond. ‘Surface water’ is defined by the Flood and Water Management Act 2010 as the ‘surface runoff’ generated by rainwater (including snow and other precipitation) which is (a) on the surface of the ground (whether or not it is moving), and (b) has not yet entered a watercourse, drainage system or public sewer (excludes overflowing watercourses, drainage systems or public sewers caused by catchment-wide rainfall events or river flow).

- 4.1.17 The EA have provided the Flood Map for Surface Water for the Rackheath area (see Appendix B). The NDR crosses an area of “deeper surface water flooding” (>0.3m deep) for both the 1 in 30 and 1 in 200 year rainfall events within the catchment of Dobbs Beck. The 0.3m threshold is chosen as it represents a typical value for the onset of significant property damages when property flooding may start (above doorstep level) and because it is at around this depth that moving through floodwater (driving or walking) may become more difficult; both of which may lead users to consider the need to close roads or evacuate areas. The Dobbs Beck catchment area at the intersection with the proposed route of the NDR is 6.77km².
- 4.1.18 Table 4.1 provides an overview of the 31 attenuation lagoons, one large swale and one attenuation ditch which will serve the 20km road and in some cases will intercept a proportion of the overland flow. Four of the designed lagoons serve to contain overland flow only, with no contribution of runoff from the road (Lagoons 1A, 8A and 13A, and the new ditch 18B). The majority of lagoons will drain via infiltration to ground. The exceptions to this are lagoons 17 and 18 which are to be lined to prevent infiltration due to groundwater considerations (refer to Section 4.1.5) and will discharge to surface water. All lagoons have been sized to accommodate a 100-year return period storm event with an additional allowance of 30% for anticipated climate change, plus a minimum 300mm freeboard. Discharges from the lagoons to surface water will be restricted to the Greenfield runoff rate. All of the attenuation lagoons have been designed using the drainage modelling package Micro-Drainage. The Micro-Drainage calculation output files are provided in Appendix C.
- 4.1.19 Existing road drainage along Plumstead Road East is unlikely to change due to the junction improvement works. The capacity of existing kerbs and gullies along Crostwick Lane and the section of North Walsham Road it connects to will be reviewed during the detailed design stage, and will be upgraded if necessary. Road drainage along the new road between Green Lane West and Wroxham Road will be a traditional system based on kerbs, gullies and a soakaway.
- 4.1.20 Given that the drainage proposals have been designed in line with the CIRIA SUDS Manual C697, and are capable of managing the 1 in 100-year storm event plus 30% allowance for climate change, plus a minimum 300mm freeboard, it is considered that the risk of surface water flooding to the majority of the scheme is negligible. Only minor risks are considered to remain due to the sections of the drainage system which rely on gullies and pipe work. These elements of the system are designed to manage the 1 in 30-year event and are more vulnerable to blockage than the SuDS based

elements. However, flow routes for runoff exceeding the 1 in 30-year design standard are to be considered within the detailed design and thus the impact of any potential flooding will be negligible.

4.1.21 In consultation with the EA it has been agreed that the period over which the attenuation lagoons empty by half can be extended beyond the normal EA requirement of 24 hours. However, it is calculated that due to poor infiltration rates, some lagoons will take more than seven days to fully empty; giving rise to the risk of overtopping during a follow-on storm event. This risk is further mitigated by designing these lagoons to have sufficient volume to contain a follow-on 10-year return period storm within the freeboard. This residual risk is considered in Section 6.1.

4.1.22 During the construction phases, it is proposed that overflows will be controlled within the highway, and will be directed toward overflow 'outlets', and toward areas where overflows can pond safely. Safe areas of storage are proposed to be located or constructed away from the highway pavement.

Table 4.1: Surface Water Drainage Arrangements

Lagoon/ Ditch Site Reference	Road Chainage (m)	Overland Catchment Draining to Lagoon	Minimum Infiltration Rate (m/hr)	Max. Control Flow (l/s)	Half drain down time (mins)

Overland flow flooding and cross-drainage design

4.1.23 As noted in section 4.1.3 above, the FMfSW indicates that the NDR will cross an area of “deeper surface water flooding” within the catchment of Dobbs Beck. This is supported by the EA maps of Areas Susceptible to Surface Water Flooding (ASSwF). These maps shows areas that are susceptible to surface water flooding, with three bandings, indicating ‘Less’ to ‘More’ susceptible to surface water flooding. The maps show the NDR crosses just one area ‘more’ susceptible to surface water flooding (see Appendix B). This is where it crosses the catchment of Beck Brook and Dobbs Beck, and the ASSwF therefore indicates similar risk to the FMfSW.

- 4.1.24 Analysis of the DTM constructed as part of this assessment indicates that the NDR bisects 43 natural catchments over its proposed 20km route. Figure 4.2 illustrates the location of each of these catchments and Table 4.2 summarises their characteristics. Whilst none of the catchments possess an active watercourse at the NDR crossing location, all pose a potential flood risk to the route as a result of overland flow during a storm event. Moreover, topographical changes as part of the proposals have the potential to increase flood risk elsewhere within the catchment if, for example, overland flow were to gather upstream of an embankment.
- 4.1.25 To reduce this potential increase in flood risk, culverts are proposed at the low points of the overland flow catchments, where flow is not directed and stored within the proposed infiltration lagoons. The culverts convey the overland flow to the other (down gradient) side of the road. In most catchments spreader ditches are also proposed along the road edge or embankment toe to direct flow to these culverts and promote infiltration. No culverts are proposed or considered necessary at the offline road sections (beyond chainage 20,000) at Postwick. No culverts are likely to be required at the three offline junction improvement sites; however the potential need to use culverts will be reviewed during the detailed design stage.
- 4.1.26 Using the DTM in GIS, catchment areas for overland flow have been defined. Hydrological catchment descriptors were obtained from the Flood Estimation Handbook (FEH). The revitalised method for estimating design-flood hydrographs (ReFH) was utilised, with outputs from FEH and GIS, to generate the rainfall and thence flood hydrographs for each catchment for a 1 in 100-year event, 24 hour storm duration. The level of infiltration was based on the FEH catchment descriptors. A hydrograph for each catchment for the climate change scenario (+30% rainfall depth) was calculated and utilised to estimate the 'critical volume' of overland flow which would be generated by each catchment upstream of the road crossings. This was used as the inflow volume to the culvert.
- 4.1.27 Two scenarios were applied to these calculations; a Blockage Scenario and an Operational Scenario (functioning culvert or where no culvert is proposed). The Blockage Scenario assumes that the proposed culverts are completely blocked and remain so for 24 hours, thus producing a worst-case flood extent. The flood level and flood extent upstream of the culvert was mapped in GIS based on the 'critical volume' and levels in the DTM.
- 4.1.28 The Operational Scenario assumes that the proposed culverts are operating as intended during a 1 in 100-year flood event + 30% for climate change. The

peak value of runoff during any half hour period during the design storm was determined using the ReFH output. The required headloss across the culvert to pass this discharge was identified based on the culvert diameter. The maximum upstream water level during the storm was then taken as the headloss height above the culvert at the upstream inlet. The flood extent upstream of the culvert was mapped in GIS based on this water level and levels in the DTM. The calculation summary sheets are provided in Appendix D and a summary provided in Table 4.2 . The culvert Blockage Scenario is 'not applicable' (N/A) for those catchments where overland flow is directed to and stored within proposed infiltration ponds. The Operation Scenario is not applicable for a catchment where no culvert is proposed. Due to the size of the box culvert for catchment OL20 (2500mm), no blockage scenario is considered.

Table 4.2: Overland Flow Catchments, Volumes and Flood Levels

4.1.29 The potential lowering of the carriageway elevation by up to 0.25m (0.5m at roundabouts) has been assessed in relation to the design of the cross drainage structures. For structural reasons there is a requirement for a minimum cover distance from the carriageway surface to the top of each culvert. If this were to require any of the culverts to be depressed significantly below natural ground level at the crossing points, then their effectiveness would be reduced. Provided that this condition can be avoided, then reduction in carriageway design level would cause no increase in flood risk to others from the development. With lowering of the carriageway there may be some increase in the risk of flood water getting on to the road in a culvert blockage scenario (likely at OL01C), but this should be manageable with the proposed road drainage arrangements.

- 4.1.30 The flood extents generated by both scenarios have been mapped and are shown in Appendix E. For the Operational Scenario there was shown to be no significant backing up behind the culverts. For the Blockage Scenario the upstream flood extents produced were in some cases significant, as would be expected for a total blockage. In producing these maps it has been assumed that the flood extents stop at the road edge or embankment toe, the resultant maximum flood levels have then been used to inform the elevation of the road or flood bund.
- 4.1.31 As shown by the maps in Appendix E, no residential properties will be put directly at risk as a result of the worst-case Blockage Scenario flood extents. The extents for catchment OL12 cross a residential property boundary, but do not pose a risk to the house, only to the garden and an outbuilding.
- 4.1.32 An Anglian Water pumping station is located within the low point at chainage 14,750, along the track immediately south of Lagoon 18. The pumping station is considered to be 'water compatible infrastructure' in the NPPF Technical Guidance and should be designed and constructed to remain operational and safe for users in times of flood. Anglian Water has confirmed this pumping station has suffered from pluvial flooding in the past. There is a small wall around the wet well and sand bags have been used in the past to prevent the building from flooding but there is no other protection in place.
- 4.1.33 Three culverts are proposed in this area: (i) 2500mm wide and 2000mm high box culvert beneath the NDR (oversized for ecological mitigation), (ii) 600mm diameter pipe beneath the track connecting the new ditch 18B to Dobbs Beck, and (iii) an approx. 600mm diameter pipe under Wroxham Road. An existing culvert is present under the track leading to the pumping station but has been filled in. No blockage of the 2500mm culvert is expected due to its size, however blockages of all other culverts have been considered (see Appendix E, Drawing numbers MMD-233906-DT-0828 to 0858). During the design flood event 'Culvert for OL19B' (600mm) receives significant volumes of overland flow from catchments OL18, OL20, OL21 and OL19B. The flood extents and levels under the Operational Scenario pose no risk of flooding to the pumping station. Under the Blockage Scenario the elevation of the track was not considered, which will be raised to 15mAOD where the new culvert is proposed as part of the Scheme. As the ground to the north of the track is at a lower elevation than the track itself, it is assumed the track would act as a weir, allowing flood waters to flow over the track and into Dobbs Beck. The depth of water on the track is expected to be ~0.1m, and is therefore unlikely to prevent access to and from the pumping station even for the occurrence of a total culvert blockage during a severe flood event.

4.1.34 The creation of this new above ground flow path under the NDR and along the new ditch is likely to reduce the overall risk of pluvial flooding in the area by improving the conveyance of flood waters towards Dobbs Beck and into 'The Springs' lakes.

Groundwater flooding

4.1.35 Groundwater flooding occurs in areas underlain by significant aquifers where the groundwater levels rise above surface elevations. Groundwater flooding differs to river flooding as it is not necessarily linked to specific rainfall events, is difficult to predict and may persist for a much longer duration.

4.1.36 As part of the design process, a ground investigation has been undertaken by Norfolk Partnership Laboratory on behalf of Norfolk County Council. This work included the drilling of a series of boreholes along the proposed route of the NDR in order to determine the ground conditions; piezometers have subsequently been installed in a number of these boreholes to monitor the groundwater table.

4.1.37 Table 3.3 provides a summary of the groundwater level data collected since monitoring began in March 2007. As shown, the maximum groundwater level varies from 2.05m to 19.64m below ground level (mbgl) (12.39mAOD to 1.44mAOD) within the vicinity of the proposed route. Annual variations in groundwater are typically in the order of one to two metres a year. Increased infiltration from the road runoff could potentially surcharge the local groundwater level and groundwater flows in the immediate vicinity of the infiltration lagoons. However, the use of grass swales, filter drains and spreader ditches will ensure that this risk is minimised by enabling rainfall from the road to infiltrate over a wider area. Thus, it is predicted that there will not be any significant risk of groundwater flooding affecting the road or local area.

4.1.38 In consultation with the EA, it has been specified that the invert levels of the infiltration basins are to be at least 1.2 m above the groundwater table to allow sufficient unsaturated zone to mitigate the risk of groundwater contamination. As shown in Table 4.3, all lagoons satisfy this requirement except Lagoon 17 where the base is 0.6m above the highest GW level and Lagoon 18 with a 0.8m unsaturated zone, both of which are intended to be lined and outfall to nearby watercourses. Further ground investigations are proposed at Lagoon 17 to inform the detailed design stage, as the groundwater levels used are from a borehole more than 500m away.

- 4.1.39 The 1.2m unsaturated zone is also not met at Lagoon 4 (0.4m unsaturated zone), Lagoon 8 (1.1 m unsaturated zone) and Lagoon 9 (1.12m unsaturated zone) requiring deepening due to the fall required on the outfall. It is not possible to line the infiltration pond at Lagoons 4, 8 and 9 as there is no watercourse to receive a positive outfall. The detailed design will be agreed with the Environment Agency, including the potential need to raise lagoon invert levels.
- 4.1.40 In exceptionally wet winters the groundwater level may rise to cause inundation of the normally dry valley between the lake and Dobbs Beck, although the extent of flooding would be restricted by the valley topography. Ground investigations in the higher ground away from the Dobbs Beck valley floor suggest there may be some minor perched water in the less permeable geological formations. This may cause additional volumes of water requiring storage in this area. However, flows are likely to be minimal and would be routed away from the road to storage locations by the proposed drainage system.
- 4.1.41 Taking into consideration the data shown in Table 4.3, it can be concluded that flood risk to the NDR arising from groundwater is likely to be minimal since the proposed road level would be above the maximum groundwater level and any seepage from perched water would be managed. Any potential influences on groundwater flood risk in the local area are also considered to be negligible.

Table 4.3: Groundwater Table Levels

** The nearest trial pit to piezometer 15P5 was TP26, with a water strike of 29.6mAOD. Boreholes 227 and 228 have observed similar groundwater levels. The variation observed at P6 has been applied to the water strike of 29.6mAOD due to its closer proximity to Lagoons 3 and 4; giving a more representative maximum groundwater level.*

4.1.42 The potential lowering of the carriageway elevation by 0.25m (0.5m at roundabouts) has been assessed against the maximum groundwater levels observed along the NDR. Provided the distance between the base of the road and the maximum levels is maintained at or more than 1.2m, no change to the risk of groundwater flooding is expected.

4.2 Climate Change Impacts

4.2.1 Given the potential sources of flooding outlined previously, the only aspect of climate change likely to impact the proposed route of the NDR is the variation in rainfall patterns. DEFRA/NPPF guidance suggests an increase of 30% should be expected in peak rainfall intensity by the year 2115. As outlined within Sections 4.1.3 and 4.1.4, this precautionary increase of 30% has been applied to calculations of surface water runoff from the road and adjacent natural catchments. As a result, the attenuation lagoons have been designed to contain a 100-year event plus 30% allowance for climate change. Where the half drain-down time exceeds 7 days, lagoons have been designed to have the capacity for a follow on 1 in 10 year event within the freeboard. In addition, capacity and flow routing for extreme events (up to the 1 in 1000-year event) have also been incorporated within the system. The capacities and consideration of climate change are shown in the micro drainage calculations for each lagoon in Appendix C.

4.2.2 The proposed Scheme would reduce the permeability within its footprint, due to areas of impermeable concrete and tarmac being constructed.

4.2.3 Considering the increase in rainfall due to climate change there may be a significant increase in surface water runoff. Without mitigation this may alter the fluvial and groundwater regimes and water quality both along the Scheme and in the surrounding area.

4.2.4 The drainage design, outlined in Section 4, has been developed to mitigate this increased runoff as a result of the proposed Scheme and climate change in order to comply with the NPPF.

5. Flood Risk Management Recommendations

5.1.1 This section outlines recommendations for the management of both on- and off-site flood risk identified as part of this FRA. It is intended for these recommendations to inform the ongoing design process for the Scheme. Also identified are areas requiring further assessment once these proposals have been prepared.

5.2 On-site flood management

5.2.1 As discussed within Section 4.1.4, the overland flow from catchments which will be bisected by the proposed route of the NDR will be managed through the use of appropriately sized attenuation lagoons, cross-drainage structures such as spreader ditches and culverts where feasible. Table 4.2 in Section 4.1.4 shows the calculated runoff volumes from these catchments and also estimates the water level to which these volumes would accumulate upstream of the road.

5.2.2 As described in Section 3.1, there is the potential for the NDR works to deviate from the current proposed elevation by +/- 0.5m during the detailed design stage. As described in Sections 4.1.4 and 4.1.5, any variation should maintain road surface elevations at above the estimated maximum flood levels calculated in Table 4.2 and above the maximum groundwater levels in Table 4.3. This assessment assumes there will be no variation to the high and low points of the road, therefore the associated road drainage arrangements remain the same.

5.2.3 A retention bund is required at OL02C (chainage 1,000) the crest level of the bunds is to be specified with reference to the maximum flood levels calculated in Table 3.2 plus a 300mm freeboard. The flood bund will protect the bridleway from the overland flow volume produced during a storm event, maintaining pedestrian access during a flood event.

5.2.4 Where cross-drainage structures are proposed, it will be necessary to consider the erosive potential of flow at the outfall of these pipes given the absence of natural channels to which discharge can be directed. Such calculations should be made with reference to CIRIA C551. In the case of smaller pipes, it may be sufficient to specify stone blankets or gabion baskets to reduce the velocity (and thus erosive potential) of discharge. However for larger pipes and culverts, more substantial structures may be required such

as simple stilling basins or level spreaders; refer to CIRIA C697 for typical design specifications.

5.3 Maintenance

5.3.1 The culverts, spreader ditches, swales and attenuation lagoons proposed by the drainage design will be maintained in accordance with policies, standards and practices of Norfolk County Council’s Transport Asset Management Plan and The SuDS Manual (CIRIA, 2007). Table 5.1 details the maintenance programme proposed.

5.3.2 In order to maintain the efficiency of the SuDS elements of the proposed drainage design, regular maintenance will be required. It is anticipated that swales, filter trenches and detention ponds will require regular inspection, litter and debris removal, and grass cutting, as well as occasional maintenance such as sediment management and vegetation replacement to retain design capacities and functionality. As outlined in the Norfolk’s Transport Asset Management Plan, the maintenance of the NDR and its associated drainage is proposed to be the responsibility of Norfolk County Council including the actions outlined in Table 5.1.

Table 5.1: Proposed Drainage Maintenance Plan

Inspection	Safety inspections of carriageway, attention to known problems or specific areas after heavy rainfall as opportunity allows.
Do Minimum	<p>The do minimum activities are the routine activities we carry out in order to ensure the safe passage of highway users.</p> <p>Cleansing activities (inc. gullies, outlets, grips annually. Use individual maintenance plan for systems if available)</p> <p>Drainage Investigation</p> <p>Add new provision grips, ditches, gullies and outlets</p>
Medium Life	<p>Reinforcement of existing system with additional capacity</p> <p>Pipeline repair to return capacity</p> <p>Partial pipeline upgrade</p> <p>Additional gullies</p>

	Additional soakage capacity
Long Life	Significant renewal or enhancement New area provision Pipeline upgrade

6. Residual Risks

6.1 Residual risk of overtopping

6.1.1 As outlined in Section 4.1.3, due to poor infiltration rates, it is calculated that some of the attenuation lagoons will take over seven days to drain down from the design 1 in 100-year plus climate change storm. This could give rise to a residual risk of flooding should a follow-on storm event occur whilst the water level in the lagoon is still of sufficient height to cause overtopping. The magnitude and probability of combinations of storm events cannot be readily quantified, but the probability of a further significant storm event occurring within seven days of another will be extremely small. However, in order to mitigate against such an occurrence, these lagoons have been designed with additional capacity to allow for runoff from a follow-on 1 in 10 year storm event to be accommodated within the freeboard. This allowance has been agreed with the EA.

6.1.2 Taking into consideration the very small probabilities involved, it can be concluded that the residual risk of overtopping due to a follow-on event is negligible.

6.2 Residual risk of flooding from overland flow

6.2.1 The creation of the new above ground flow path under the NDR and along the new ditch in the Rackheath Springs area is likely to reduce the risk of pluvial flooding locally by improving the conveyance of flood waters towards Dobbs Beck and into 'The Springs' lakes. There remains a residual risk of pluvial flooding to the AWS pumping station. However, this risk will have been reduced from the existing situation by the NDR proposals.

6.3 Risk management by design

6.3.1 As the surface water storage is to be provided in the form of open basins, consideration for public safety is paramount. Therefore where the storage depth exceeds 1.2m, prohibitive planting will be provided to discourage access to the water. For those basins close to public access, perimeter fencing and lifesaving equipment will also be provided. Moreover, for reasons of maintenance ease as well as safety, all side slopes within the system, including those within the storage basin and swales, have been limited to 1 in 4.

7. Conclusions

- 7.1.1 As a part of the on-going consultation process with the Environment Agency, comments on the draft FRA were provided to Mott MacDonald on 28 November 2013. Responses to the issues raised can be found in Appendix F; along with supporting data and figures.
- 7.1.2 In accordance with the requirements of NPPF, the proposals for the development of the NDR have been assessed for flood risk, and consideration has been given both to risk to the proposed development, and to risk elsewhere as a result of the development.
- 7.1.3 The proposed Scheme and three offline junction improvements are entirely located within Flood Zone 1 where there is little or no annual probability of fluvial or tidal flooding. Table 3 of the NPPF Technical Guidance states all uses of land are appropriate in Flood Zone 1. As such, the proposed Scheme would be permitted within this zone.
- 7.1.4 The development of the NDR will introduce a significant amount of impermeable area to a previously undeveloped site. In compliance with NPPF, the highway drainage for the NDR has been designed in line with SuDS principals to restrict runoff to Greenfield discharge rates. Therefore flood risk due to surface water runoff will be mitigated to acceptable levels.
- 7.1.5 The proposed route will bisect 43 natural catchments and an assessment has been made of the potential runoff from these catchments. The resultant flood extents have been mapped upstream of the road where natural drainage paths will be severed within these catchments. Two scenarios were considered, culvert operational, and culverts fully blocked, and the flood extents from both will, at no point, affect any existing property or infrastructure. The exception is the Anglian Water pumping station near Lagoon 18, where there remains a residual risk from pluvial flooding. However, due to the lower elevation of ground upstream of the access track, the track would act as a weir and flood waters will flow towards Dobbs Beck. This, and the creation of a new above ground flow path, will improve the conveyance of pluvial flood flows in this area compared to the existing situation.
- 7.1.6 Given the depth of the groundwater table beneath the preliminary road levels, flood risk to the NDR and offline junction improvements arising from groundwater is likely to be minimal. Any residual risks, due to climate change

for example, would be easily managed by the proposed surface water drainage system.

- 7.1.7 With the implementation of the recommended flood risk management and drainage proposals within Section 5, the NDR and associated offline junction improvement proposals are considered to be acceptable in terms of flood risk and meet the requirements of NPPF.

INTRODUCTION

This document is submitted in relation to the application for a Development Consent Order by Norfolk County Council to the Secretary of State, under the Planning Act 2008.

The application is for the Norfolk County Council (Norwich Northern Distributor Road (A1067 to A47(T))) Order, to grant development consent for the construction of a new highway running west to east, to south, between the A1067 Fakenham Road and the A47 Trunk Road at Postwick, including improvements to the existing highway network, to the north and north east of Norwich.

This document is the Explanatory Memorandum, comprises part of the application documents and is provided as required under Regulation 5(2)(f) of the Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2009.

1 Summary

- 1.1 This Statement identifies whether the proposals for the Norwich Northern Distributor Road engage one or more of the matters in respect of statutory nuisance set out in section 79(1) of the Environmental Protection Act 1990 (the 1990 Act). Where any such matters could be engaged, the Statement explains how the applicant proposes to mitigate or limit them.
- 1.2 This Statement concludes that the only matters comprised in section 79(1) of the 1990 Act which may, potentially, be engaged as a consequence of the Scheme proposals are:
- 1.2.1 dust impacts arising from construction activities (s. 79(1)(d));
 - 1.2.2 impacts arising from lighting during construction (s. 79(1)(fb)); and,
 - 1.2.3 noise impacts from construction activities (s. 79(1)(g) and (ga)).
- 1.3 The Statement concludes that, with the implementation of mitigation and control measures included in the Environmental Statement (Document 6.1), the Construction Environmental Management Plan (Document 6.2 - Environmental Statement, Volume II, Chapter 23) and the construction methodology (Document 6.2 - Environmental Statement, Volume II, Chapter 2), the project would not give rise to a nuisance or be prejudicial to health.

2 Introduction

- 2.1 This Statement in Respect of Statutory Nuisance (the Statement) accompanies an application by Norfolk County Council (NCC) for development consent under section 37 of the Planning Act 2008 for the Norwich Northern Distributor Road (NDR).
- 2.2 The project, known as the NDR, comprises a predominantly dual carriageway all-purpose strategic distributor road which would link the A1067 Fakenham Road, near Attlebridge, to the A47 Trunk Road at Postwick. On 9 August 2013 the Secretary of State for Transport directed that the NDR and associated matters be treated as development for which development consent is required.
- 2.3 This Statement has been prepared pursuant to regulation 5(2)(f) of the Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2009. In accordance with that regulation, it identifies whether the NDR engages one or more of the matters listed as statutory nuisances in section 79(1) of the Environmental Protection Act 1990 and, if so, how NCC proposes to mitigate or limit those effects.
- 2.4 The Statement has been prepared having regard to the Planning Act *Application Form Guidance* published by the Department for Communities and Local Government in June 2013.
- 2.5 Where relevant, this Statement refers to the Environmental Statement (ES) (Documents 6.1 and 6.2), the Construction Environmental Management Plan (CEMP) (Document 6.2 – ES, Volume II, Chapter 23) and the Construction Methodology (Document 6.2 – ES, Volume II, Chapter 2).

3 Statutory Context

3.1 The requirement for this Statement

3.1.1 Section 37(3)(d) of the Planning Act 2008 requires applications for development consent to be accompanied by documents and information of a prescribed description.

3.1.2 The documents and information are prescribed by the Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2009. Regulation 5(2)(f) provides that an application must be accompanied by:

a statement whether the proposal engages one or more of the matters set out in section 79(1) (statutory nuisances and inspections therefor) of the Environmental Protection Act 1990, and if so how the applicant proposes to mitigate or limit them.

3.2 Categories of statutory nuisance

3.2.1 Section 79(1) of the Environmental Protection Act 1990, as it applies in England and Wales, provides that each of the following matters constitutes a statutory nuisance:

- (a) *any premises in such a state as to be prejudicial to health or a nuisance;*
- (b) *smoke emitted from premises so as to be prejudicial to health or a nuisance;*
- (c) *fumes or gases emitted from premises so as to be prejudicial to health or a nuisance;*
- (d) *any dust, steam, smell or other effluvia arising on industrial, trade or business premises and being prejudicial to health or a nuisance;*
- (e) *any accumulation or deposit which is prejudicial to health or a nuisance;*
- (f) *any animal kept in such a place or manner as to be prejudicial to health or a nuisance;*

- (fa) *any insects emanating from relevant industrial, trade or business premises and being prejudicial to health or a nuisance;*
- (fb) *artificial light emitted from premises so as to be prejudicial to health or a nuisance;*
- (g) *noise emitted from premises so as to be prejudicial to health or a nuisance;*
- (ga) *noise that is prejudicial to health or a nuisance and is emitted from or caused by a vehicle, machinery or equipment in a street or in Scotland, road;*
- (h) *any other matter declared by any enactment to be a statutory nuisance.*

3.2.2 Paragraph (h) of section 79(1) incorporates any statutory nuisances contained in other legislation. The Public Health Act 1936 provides that various other matters are statutory nuisances for the purposes of the Environmental Protection Act 1990. However, none of these matters are considered relevant to the NDR scheme.

3.2.3 The remaining sub-sections in section 79 contain exceptions and definitions. The following exceptions are relevant to the NDR:

- (a) subsection 1(c) (fumes or gases emitted from premises) does not apply in relation to premises other than private dwellings (s. 79(4)); and
- (b) subsection 1(ga) (noise caused by a vehicle, machinery or equipment in a street) does not apply to noise made by, amongst other matters, traffic (s. 79(6A)).

3.2.4 The definitions that are relevant to the NDR are:

- (a) “dust” does not include dust emitted from a chimney as an ingredient of smoke;
- (b) “fumes” means any airborne solid matter smaller than dust;
- (c) “gas” includes vapour and moisture precipitated from vapour;
- (d) “industrial, trade or business premises” means premises used for any industrial, trade or business purposes or premises not so used on which matter is burnt in connection with any industrial, trade or

business process, and premises are used for industrial purposes where they are used for the purposes of any treatment or process as well as where they are used for the purposes of manufacturing;

- (e) “noise” includes vibration;
- (f) “prejudicial to health” means injurious, or likely to cause injury, to health;
- (g) “premises” includes land and ... any vessel;
- (h) “private dwelling” means any building, or part of a building, used or intended to be used, as a dwelling;
- (i) “road” has the same meaning as in Part IV of the New Roads and Street Works Act 1991;
- (j) “smoke” includes soot, ash, grit and gritty particles emitted in smoke; and
- (k) “street” means a highway and any other road, footway, square or court that is for the time being open to the public.

4 Assessment of matters potentially engaged

4.1 Introduction

4.1.1 The following matters set out in section 79(1) of the Environmental Protection Act 1990 are potentially engaged by the NDR:

- (a) dust impacts that could engage paragraph (d) of section 79(1);
- (b) impacts from artificial light which could engage paragraph (fb) of section 79(1); and
- (c) noise impacts which could engage paragraphs (g) and (ga) of section 79(1).

4.1.2 Each of these impacts is discussed below.

4.2 Dust (section 79(1)(d))

4.2.1 Construction activities can result in temporary effects from dust. 'Dust' is a generic term which usually refers to particulate matter in the size range 1-75 microns in diameter; the most common impacts from dust emissions are soiling and increased ambient PM10 concentrations (Building Research Establishment, 2003).

4.2.2 The distances from the emission source at which significant construction dust effects are likely to occur are dependent on the extent and nature of mitigation measures, the prevailing wind conditions, rainfall and the presence of natural screening by, for example, vegetation or existing physical screening. However, research indicates that effects from construction activities that generate dust are generally limited to within 150-200m of the construction site boundary (Highways Agency, 2007), although guidance issued by the Institute of Air Quality Management requires consideration of effects up to 350m from the construction area boundary (Institute of Air Quality Management, 2011).

Construction phase

4.2.3 Construction work requires the use of a range of site plant, such as excavators, piling equipment, cranes and on site generators. All of these plant have an energy demand and some may result in direct emissions to air from exhausts. The key effects during the construction phase are associated with dust-raising activities related to earthworks, construction and vehicles

tracking. This includes the handling of spoil, loading and unloading of trucks and the movement of the trucks around the construction site and onto the local road network.

- 4.2.4 ES Volume 1, Chapter 4, Section 1.6 (Document 6.1) details the assessment of construction phase activities. There are 63 sensitive receptors located within 20m of the DCO boundary. The significance of dust soiling effects is assessed as slight adverse because all human receptors are considered high risk.

Mitigation

- 4.2.5 The NDR has a number of incorporated mitigation measures for the construction phase which are principally aimed at reducing dust effects from the construction activities and will be included within the Construction Environmental Management Plan (CEMP) (Document 6.2 - ES, Volume 2, Chapter 23). The construction phase will include the mitigation measures presented in Volume 1 Chapter 4 of the ES (Document 6.1) which will reduce the dust risk from each of the sources assessed. The overall significance of effects from construction dust has been determined taking this mitigation into account.

Conclusion

- 4.2.6 Taking into account the mitigation measures described above, the dust impacts arising during the construction phase are not predicted to cause a nuisance or to be prejudicial to health.

Operational phase

- 4.2.7 There are no predicted dust generating activities during operation. There may be routine maintenance to the road which could have the potential to generate dust but these will be small scale and intermittent. The maintenance teams will manage dust using methods similar to those outlined within the CEMP (Document 6.2 - ES, Volume 2, Chapter 23).

Conclusion

- 4.2.8 Taking into account the mitigation measures described above, the dust impacts arising during the operational phase are not predicted to cause a nuisance or be prejudicial to health.

4.3 Artificial light (section 79(1) (fb))

- 4.3.1 During construction there may be a requirement to light site compounds and construction areas at some times of the day, based on a standard 12 hour working day which in winter will include some hours of darkness.
- 4.3.2 Prior to construction, a lighting management plan will be submitted to the local authority to approve acceptable lighting regimes taking account of potential effects on local people. This will be managed through the CEMP and lighting scheme (to be approved by the local authority pursuant to requirements 18 and 19 (Schedule 2 to the Draft Development Consent Order, Document 3.1).
- 4.3.3 During operation, the NDR will not be lit with the exception of the Postwick Hub which already has established lighting.
- 4.3.4 Taking into account the mitigation measures that are set out in the DCO application (the ES in particular), and the management of these through the CEMP, it is considered there the impacts from artificial lighting arising during both the construction and the operational phase will not cause a nuisance or be prejudicial to health.

4.4 Noise (section 79(1)(g) and (ga))

- 4.4.1 This section addresses the potential of noise during construction activities. Noise impacts due to operational traffic would not constitute a statutory nuisance for the purposes of the Environmental Protection Act (see section 79(6A)).
- 4.4.2 Noise levels generated by construction activities are only deemed to be significant if the total noise (pre-construction baseline noise plus construction noise) exceeds the pre-construction baseline noise by 5 dB or more, subject to lower cut-off values of 65 dB (daytime), 55 dB (evening) and 45 dB LAeq (night-time) from construction noise alone; and have a duration of one month or more, unless works of a shorter duration are likely to result in significant impact.
- 4.4.3 The day-time period is defined as 07:00 to 19:00; the evening period as 19:00 to 23:00 and the night-time period as 23:00 to 07:00.
- 4.4.4 Construction noise is predicted in the ES (Document 6.1, Volume I, Chapter 11) to generate temporary significant effects at some locations. Further construction noise calculations will be carried out as further construction-related information becomes available, and the Contractor will be required to

apply for consent under section 61 of the Control of Pollution Act 1974 prior to the commencement of noisy construction activities.

4.4.5 Mitigation methods to reduce the impacts from noise can be found in the CEMP (Document 6.2 - ES, Volume 2, Chapter 23).

4.4.6 Taking into account the mitigation measures described above, it is considered that the noise impacts during both the construction phase will not cause a nuisance or be prejudicial to health.

4.5 Matters not potentially engaged

4.5.1 It is considered that the following matters set out in section 79(1) of the Environmental Protection Act 1990 will not be engaged by the NDR project. Consequently, they have not been discussed further in this Statement:

- (a) *any premises in such a state as to be prejudicial to health or a nuisance;*
- (b) *smoke emitted from premises so as to be prejudicial to health or a nuisance;*
- (c) *fumes or gases emitted from premises so as to be prejudicial to health or a nuisance;*
- (e) *any accumulation or deposit which is prejudicial to health or a nuisance;*
- (f) *any animal kept in such a place or manner as to be prejudicial to health or a nuisance;*
- (fa) *any insects emanating from relevant industrial, trade or business premises and being prejudicial to health or a nuisance;*
- (h) *any other matter declared by any enactment to be a statutory nuisance.*

5 CONCLUSION

5.1.1 This Statement identifies whether the matters in respect of statutory nuisance set out in section 79(1) of the Environmental Protection Act 1990 would be engaged by the proposed NDR. Where such matters would be engaged, the Statement sets out how it is proposed to mitigate or limit the nuisance caused.

5.1.2 The Statement concludes that the following matters set out in section 79(1) could potentially be engaged by the NDR project:

- (d) *any dust, steam, smell or other effluvia arising on industrial, trade or business premises and being prejudicial to health or a nuisance;*
- (fb) *artificial light emitted from premises so as to be prejudicial to health or a nuisance;*
- (g) *noise emitted from premises so as to be prejudicial to health or a nuisance;*
- (ga) *noise that is prejudicial to health or a nuisance and is emitted from or caused by a vehicle, machinery or equipment in a street or in Scotland, road;*

5.1.3 For all of the above matters, the Statement concludes that, with the implementation of mitigation and control measures set out in the ES, the CEMP and the Construction Methodology, the Scheme would not give rise to a nuisance or be prejudicial to health.

Introduction

This document is submitted in relation to the application for a Development Consent Order by Norfolk County Council to the Secretary of State, under the Planning Act 2008.

The application is for the Norfolk County Council (Norwich Northern Distributor Road (A1067 to A47(T))) Order, to grant development consent for the construction of a new highway running west to east, to south, between the A1067 Fakenham Road and the A47 Trunk Road at Postwick, including improvements to the existing highway network to the north and north east of Norwich.

This document comprises part of the application documents and relates to Regulation 5(2)(q) of the Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2009.

1 Summary

- 1.1.1 This document describes the consents, licences and permits that will be required for the construction or operation of the NDR but which are not included in the Draft Development Consent Order (Document 3.1).
- 1.1.2 Such licences and permits will be the subject of separate applications to other bodies such as the Environment Agency, Natural England or the local planning authority. The consents relate to discharge of water during construction, works affecting protected species (bats and great crested newts), drainage, and noise and traffic controls during construction.
- 1.1.3 Norfolk County Council (NCC) is not aware of any reason why any of the consents are not likely to be granted.

2 Other Consents, Licences and Permits

2.1 Introduction

- 2.1.1 This document is submitted as part of the application by Norfolk County Council (NCC) for development consent for the Norwich Northern Distributor Road (NDR).
- 2.1.2 This document describes the consents, licences and permits that will be required for the construction, operation and maintenance of the NDR but which are not included in the Draft Development Consent Order (Document 3.1) submitted with this application. Such licences and permits will therefore be the subject of separate applications to other bodies such as the Environment Agency, Natural England or the local planning authority.
- 2.1.3 This document is not required by the Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2009 but is recommended in Planning Inspectorate Advice Note 6 (Preparation and Submission of application documents, June 2012), at Appendix 1.

2.2 Discharge Consents

- 2.2.1 Consent for discharge of water to the aquifer may be required under the Environmental Permitting (England and Wales) Regulations 2010.
- 2.2.2 Piling work will take place at bridge locations, and the piles may penetrate the water table. If so, some water may have to be pumped out and placed back in the aquifer. Before it is returned to the aquifer it would be treated in a settlement system.
- 2.2.3 Any discharge consents required will be sought from the Environment Agency prior to any such works being carried out.

2.3 Protected Species Licences

- 2.3.1 Protected species licences will be required under regulation 53 of the Conservation of Habitats and Species Regulations 2010 in relation to the species identified below.
- 2.3.2 Great crested newts: a breeding pond and an associated area of terrestrial habitat for great crested newts will be removed as part of the construction of

the Scheme. The pond that will be removed is part of a series currently in place – the others in this series are not being removed. As part of the Scheme four new ponds are being created in the immediate vicinity, and areas of remaining terrestrial habitat will be maintained along with the new ponds. Newt fencing will be erected before construction works begin, and trapping and re-location of newts will be carried out.

- 2.3.3 Bats: the construction works will result in the removal of a number of bat roosts in buildings and in trees. The NDR will intersect flight paths and other features of bat activity. New roosts will be provided, including two bat houses and a number of bat boxes. Severance of significant flight paths will be addressed by the installation of crossing points over/under the NDR of various types, such as bat gantries, green bridges, underpasses and modified highway bridges to provide dark corridors.
- 2.3.4 Protected species licences will be sought from Natural England following the making of the development consent order sought by this application. Mitigation measures have been discussed with the Natural England Case Officer during the consultation that has been on-going throughout the design and evolution of the Scheme. Draft licence applications were submitted to Natural England in November 2013, with a view to a letter of comfort being obtained confirming that Natural England consider that it is likely that it would be in a position to grant protected species licences when formally sought.

2.4 Land Drainage Consents

- 2.4.1 Consent to obstruct watercourses may be sought from the relevant local drainage board under the Land Drainage Act 1991 (section 23).
- 2.4.2 These consents will be required if the dry watercourses will require culverting, and they are in an area administered by the Broads Internal Drainage Board, from whom any consent required will be sought. Discussions between NCC, the Environment Agency and the Internal Drainage Board regarding this and other relevant aspects of the Scheme have already taken.

2.5 Noise Controls

- 2.5.1 Prior consent for works on construction sites may be sought from the relevant local authority under section 61 of the Control of Pollution Act 1974.
- 2.5.2 If applied for (the consent is not a requirement), then it would be sought by the construction contractor prior to relevant works commencing.

2.6 Traffic Controls

- 2.6.1 The Draft Development Consent Order (Document 3.1) provides powers for specific temporary restrictions as well as general powers for NCC to control traffic for the purposes of the construction of the NDR. In the event that any traffic controls are required that are outside the scope of the development consent order then they would be applied for by the contractor at the appropriate time.

1 Key Summary

1.1 Summary

1.1.1 This TA contains the following chapters:

- **Chapter 2:** objectives for the NDR scheme, description of the discussions with the Highway Authorities to agree the scope and extent (in terms of number of junctions to be assessed) of this TA.
- **Chapter 3:** scheme description
- **Chapter 4:** national and local policy context
- **Chapter 5:** existing network conditions
- **Chapter 6:** sustainable transport considering the following modes: bus, Park & Ride, coaches, rail, non-motorised users
- **Chapter 7:** transport modelling outputs and how they are used in this TA
- **Chapter 8:** traffic impact assessment for on-line, other junctions with NDR at Postwick and off-line junctions
- **Chapter 9:** wider impacts including impacts on strategic movements, suburban and City Centre impacts, journey times and effects on people
- **Chapter 10:** high level analysis of Personal Injury Collisions (PIC) and analysis of cluster sites for the principal route network
- **Chapter 11:** assessment of construction traffic impact
- **Chapter 12:** how NDR mitigates against existing problems and future problems arising and any mitigation required for NDR

1.2 Conclusions

1.2.1 The transport modelling and appraisal work has demonstrated that the Do Minimum network would be inadequate to accommodate traffic generation produced by the high levels of employment and residential growth planned for greater Norwich and lead to a substantial deterioration in operational

performance, transport journey times and reliability, thus reducing the economic competitiveness of the City. This would be accompanied by a further deterioration in traffic conditions on inappropriate routes, reductions in operational performance for bus services and worsening conditions for walking and cycling. There would be an increasing risk of worsening road safety as traffic would continue to grow on inappropriate routes and queues may extend onto the high speed A47(T) dual carriageway.

1.2.2 The following junctions were assessed in detail in this TA:

- All 14 on-line junctions along the NDR;
- Six other junctions with NDR at Postwick; and
- Five off-line junctions: A47(T) Trowse, A146 / Martineau Lane, Bracondale / King Street, Crostwick Junction (North Walsham Road / Crostwick Lane / Rackheath Lane), Rackheath Junction (Wroxham Road / Green Lane West)

1.2.3 The policy chapter concludes that the NDR scheme is considered complementary to the relevant key policies and guidance and is aligned with national and local policy.

1.2.4 The conclusions on sustainable transport are as follows:

- Bus: the NDR and its associated complementary measures are predicted to reduce congestion on the core network, thereby reducing bus journey times as demonstrated in this report. The complementary measures in the City Centre include road closures therefore giving priority to buses. These should lead to more reliable public transport and encourage greater usage.
- 18 of the current bus services would cross the route of the proposed NDR. The majority of these would be unaffected by the scheme with any minor impacts being mitigated against by benefitting from reduced traffic levels on radial routes and the Outer Ring Road.
- Park & Ride: the six Park & Ride sites and their bus services are likely to benefit from reductions in congestion along key corridors by the introduction of the NDR. Furthermore, the introduction of signals at the

Postwick Park & Ride junction allows prioritisation of Park & Ride bus services.

- Rail: rail services will not be directly affected by the NDR. The NDR is likely to however have a beneficial impact on journey times to and from the main rail station.
- Non-motorised users (NMU): one of the main aims of the NDR is to enable the removal of through traffic from the city centre and the introduction of walking and cycling improvements.
- There are a number of rights of way that are affected by the NDR. Detailed mitigation measures are set out for each of them.
- The NDR scheme also includes approximately 25km of new pedestrian / cycle links along the route within the landscape strip. These would link to existing facilities and enhance the walking and cycling networks.

1.2.5 The results presented in this TA are based on a number of iterations, with detailed junction modelling being carried out and the results then fed back into the strategic model with traffic being re-assigned. The testing has shown that with increasing capacity provided at the NDR junctions, the demand along the NDR also grew. Therefore, it is apparent that a careful balance needs to be struck between providing sufficient capacity to meet the objectives of the scheme without encouraging unnecessary or longer motorised journeys.

1.2.6 The junction assessments presented in this TA demonstrate that the NDR approach arms have capacity levels below the desirable maximum level of 85% capacity in 2017 except for the southbound approach to the Postwick NE roundabout and the New Link Bridge approaching the Park & Ride signalised junction. In 2032, a number of the approaches show capacity levels that are above the 85% level but below their theoretical maximum threshold of 100% except for the southbound approach to the Postwick NE roundabout and the New Link Bridge approaching the Park & Ride signalised junction. There is a small number of side roads and non-NDR links that are above the desirable level in 2017 and above the theoretical level in 2032. The resulting queues are deemed to be acceptable.

1.2.7 The junction layouts presented in this TA are considered to be the best possible balance between relieving the existing network whilst ensuring acceptable conditions on this new part of the network. It does however mean that there are likely to be some very limited queues and delays on

some approaches to a small number of the on-line junctions during the morning and evening peak periods in 2017 when the road would be opened to traffic.

- 1.2.8 The existing Postwick Park & Ride roundabout junction is forecast to experience substantial queues and delays on Yarmouth Road in both peak periods in both 2017 and 2032. With NDR and the signal junction improvement, the theoretical capacity limit is exceeded in 2032 PM peak, but the queues and delays on Yarmouth Road reduce significantly in the DS scenario with the introduction of signals. Furthermore, the proposed signal junction allows Park & Ride bus services being prioritised via dedicated signal control.
- 1.2.9 Theoretical capacity is also exceeded at Martineau Lane / A146 and Bracondale / King Street junctions. The results demonstrate that this is not due to the NDR but background traffic growth with over-capacity levels similar in the DM and DS scenarios. Thus the NDR scheme itself does not significantly affect these junctions.
- 1.2.10 The wider effects of the NDR are considered. The results demonstrate that the NDR reduces traffic levels and congestion on orbital roads, the Outer Ring Road and the radial routes in the north and northeast of Norwich. Journey times along key highway and public transport routes would be significantly reduced through the introduction of NDR. City Centre through traffic would be reduced by the NDR and its complementary measures, leading to lower traffic levels inside the Inner Ring Road than in the 2012 base.
- 1.2.11 The high level safety review that was undertaken demonstrates that 62 (70%) out of the identified 89 accident cluster sites are predicted to experience lower flows due to NDR, which is considered likely to have an overall beneficial effect given the established relationship between traffic flow levels and accident risk.
- 1.2.12 Construction traffic impacts are unlikely to be severe and a range of mitigation measures will assist in reducing any temporary impacts to acceptable levels.
- 1.2.13 Overall, the NDR scheme would deliver benefits in terms of materially improving highway conditions in Norwich overall and meet the relevant policy objectives without creating any unacceptable effects.

2 Introduction

2.1 Scheme Background

- 2.1.1 Mott MacDonald (MM) has been appointed by Norfolk County Council (NCC) to assist with the development and appraisal of the Norwich Northern Distributor Road, known as the NDR or referred to as the Scheme.
- 2.1.2 The Scheme would be a dual carriageway all-purpose strategic distributor road, to be classified as the A1270 Principal Road, which would link the A1067 Fakenham Road near Attlebridge, to the A47 Trunk Road (T) at Postwick. This will be over a length of approximately 20.4km.
- 2.1.3 The NDR is a project of national significance which requires a Development Consent Order (DCO) under the Planning Act 2008 and this formal planning process began in early 2013. It is currently anticipated that the process will be completed in time for the NDR scheme to start construction in 2015 and to be opened in 2017.
- 2.1.4 This document is one of a number that support the DCO, each of which has its own unique document number, and should therefore be read in conjunction with the other documentation. The proposed layout of the NDR is shown in the General Arrangement Plans contained in document number 2.6, whilst the full needs case for the NDR is explained in the **Statement of Reasons** (document 4.1) and the **Environmental Statement** (document 6.1).
- 2.1.5 This report uses traffic data and results from forecasts of NATS transport model. These are contained in the **Traffic Forecasting Report** (document reference 5.6).

2.2 Structure of Report

- 2.2.1 The structure of this Transport Assessment is as follows:
- **Chapter 1:** Key Summary
 - **Chapter 2:** Introduction

- **Chapter 3:** Scheme Description
- **Chapter 4:** Policy Context
- **Chapter 5:** Existing Network Description
- **Chapter 6:** Sustainable Transport
- **Chapter 7:** Transport Modelling Inputs and DM Appraisal
- **Chapter 8:** Traffic Impact Assessment
- **Chapter 9:** Wider Effects of NDR
- **Chapter 10:** Road Safety Review
- **Chapter 11:** Construction Traffic Assessment
- **Chapter 12:** Mitigation
- **Chapter 13:** Conclusions

2.3 Objectives

2.3.1 The objectives for the NDR scheme are as follows.

- reduce traffic levels and congestion on the existing road network both within the urban area and beyond to the north;
- facilitate journeys that are currently difficult and require traffic to use roads that are unsuitable for the type and volume of traffic that is currently accommodated;
- provide access to and help to deliver, planned and potential areas of growth, and enable those areas to be free of the need to incorporate provision for extraneous traffic;
- provide improved transport connectivity, including with the national strategic road network, for existing and future areas of residential and employment development, Norwich International Airport and the wider area of North and North East Norfolk;

- increase the opportunities for improving provision for public transport and other sustainable forms of transport and for improving traffic management within the City Centre, thereby encouraging modal shift, and
- improve traffic related environmental conditions for residents in the northern suburbs of Norwich and outlying villages, whilst minimising the adverse environmental impacts of the NDR.

2.4 Discussions with Highway Authorities / Agreement on Scope

- 2.4.1 A first draft of the TA scoping report was issued in April 2013. Following this, a meeting was held with NCC Highway officers on 1 May 2013 during which the report was discussed. A revised TA scoping report was issued in June 2013 which is included in **Appendix A**.
- 2.4.2 At the time of writing the TA scoping report, the Norwich Area Transportation Strategy (NATS) transport model which has been developed since 2002, was being updated for the purposes of this NDR submission using fresh survey data collected in 2012. This was done to strengthen the model with up to date data and for the model data to be used in this TA.
- 2.4.3 The NATS model was updated in accordance with WebTAG 3.19 guidance. It is considered adequate to use this model for high level assessment, to understand where network problems exist, to give a general understanding of the nature and scale of these problems, and to consider impacts on junctions when comparing scenarios (existing, Do Minimum (DM) and Do Something (DS)).
- 2.4.4 In addition to the above information that can be obtained from the NATS model, detailed junction assessments are used in this TA to understand the performance of individual junctions during peak hours.
- 2.4.5 The discussions with the Highway Authority centred around the suitability of the NATS model results and where more detailed junction assessments would be required. The first draft of the scoping report contained a “list of junctions that potentially require assessment”. Further to consideration of preliminary model outputs and looking at which junctions would be adversely impacted upon by the introduction of NDR, and further discussions with NCC, the number of junctions was reduced to those presented in the revised

scoping report. Subsequently, this was further reviewed by NCC officers based on updated traffic flows obtained from the NATS model and agreement was reached on testing the following junctions:

- All 14 On-line junctions along the NDR;
- Six other junctions with NDR at Postwick; and
- Five off-line junctions: A47(T) / A146 Trowse, A146 / Martineau Lane, Bracondale / King Street, Crostwick junction (B1150 North Walsham Road / Crostwick Lane / Rackheath Lane), Rackheath junction (A1151 Wroxham Road / Green Lane West)

2.4.6 The table below contains the off-line junctions presented in the scoping report (revision B) including NCC officers' comments regarding the need for detailed assessment. These comments are based on discussions held on 12 June 2013, a subsequent email dated 14 June 2013 and further considerations dated 25 June 2013 that are summarised in a note contained in **Appendix B**.

Table 2.1 Off-line Junctions

Junction	Detailed assessment required / NCC comments
A140 Boundary Road / Reepham Road / Cromer Road / A1042, A1042 Mile Cross Lane / St Faith Road / Catton Grove Road, A1042 Salhouse Road / Gurney Road	NO: The Outer Ring Road junctions are considered to immediately benefit from the NDR with model data demonstrating reduced flows at all those junctions.
A1067 Fakenham Rd / Fir Covert Road	NO: This junction is likely to be converted to signals by a supermarket proposal and possibly before the NDR is built. In addition, model data shows that NDR would reduce traffic levels through this junction.
B1150 North Walsham Road / Crostwick (Crostwick Junction)	YES: An improvement is proposed at this junction in connection with NDR. This should be assessed in detail.
B1150 North Walsham Road / White Woman Lane	NO: Model data demonstrates that NDR would reduce traffic levels at this junction.

Junction	Detailed assessment required / NCC comments
A1151 Wroxham Road / Muck Lane	NO: It is likely that Muck Lane will be a key access point for the Rackheath development but this is currently not reflected in the model as access details will not be fully known for many years. If Muck Lane does become a key access point, an improvement at this junction is likely to be required in the future but essentially as a consequence of the large development traffic levels predicted by 2032, not due to the NDR. Further assessment in this TA which examines NDR impacts is therefore not required.
A1151 Wroxham Road / Green Lane West (Rackheath Junction)	YES: similar to the above junction, exact access points for the Rackheath development are not yet known. A safety improvement is however proposed for this junction in connection with NDR and detailed assessment should therefore be included in the TA.
Salhouse Road / Green Lane West	NO: similar to the above two junctions, improvements are likely to be required in the future as a consequence of large traffic flow increases due to development, not NDR.
Plumstead Road / Woodside Road	NO: Model data demonstrates that NDR would reduce traffic levels at this junction.
A146 / Martineau Lane	YES: despite the moderate increases in flows shown at this junction, it was ultimately agreed to carry out detailed modelling for this junction.
Bracondale / King Street	YES: despite the moderate increases in flows shown at this junction, it was ultimately agreed to carry out detailed modelling for this junction.
A47(T) / A146 Trowse	YES: despite the moderate increases in flows shown at this junction, it was ultimately agreed to carry out detailed modelling for this junction.
A47(T) / A140 Harford	NO: Model data demonstrates that NDR would reduce traffic levels at this junction.
A47(T) / A11(T) Thickthorn	NO: Model data demonstrates that NDR would reduce traffic levels at this junction.
A47(T) / B1108 Watton Road	NO: Model data demonstrates that NDR would reduce traffic levels at this junction.

Junction	Detailed assessment required / NCC comments
A47(T) / A1074 Longwater	NO: Model data demonstrates that NDR would reduce traffic levels at this junction.

2.4.7 Confirmation was subsequently received from HA by email dated 17 July 2013 that out of the five junctions with the A47(T) for which the HA is responsible, only Postwick and Trowse junctions would have to be assessed in detail in this TA.

2.4.8 The agreed total number of off-line junctions is therefore the five junctions as referred to in paragraph 2.4.2, two of which are strategic junctions and the remaining three are within the control of NCC, the local highway authority.

2.5 Study Area

2.5.1 The study area is in line with the fully modelled area as per the NATS model, a figure of which is included in **Appendix C.1** of this TA.

2.5.2 The **Highway Local Model Validation Report (Highway LMVR)** provides a definition of the modelled areas as below.

2.5.3 Two main areas have been defined within the model in line with WebTAG guidance. The areas are as follows:

- **Fully Modelled Area** – this is the area over which proposed interventions have influence, subdivided into:
 - *Area of Detailed Modelling* – the area in which significant impacts of interventions are certain. Modelling in this area is characterised by representation of all trip movements, small zones and, detailed network representation with junction modelling (including flow metering and blocking back)
 - *Rest of Fully Modelled Area* – this is the area over which the impacts of interventions are considered to be quite likely, but relatively weak in magnitude. This area is characterised by representation of all trip movements, somewhat larger zones and less network detail than the area of detailed modelling with speed/flow modelling.

- **External Area** – the impacts of interventions can be assumed to be negligible here. In terms of detail it would be expected that the network represents a large proportion of the rest of Great Britain, with only a partial representation of demand – i.e. external to external movements through the FMA; large zones; skeletal network and fixed speed modelling.

3 Scheme Description

3.1 Introduction

- 3.1.1 The Norwich Northern Distributor Road, known as the NDR or referred to as the Scheme, is a dual carriageway all-purpose strategic distributor road, to be classified as the A1270 Principal Road, which would link the A1067 Fakenham Road, near Attlebridge, to the A47 Trunk Road (T) at Postwick. This will be over a length of approximately 20.4km. Refer to the General Arrangement Plans in document number 2.6.
- 3.1.2 A detailed scheme description is provided in the **Environmental Statement** (document 6.1) in Chapter 2.

4 Policy Context

4.1 Policy Fit

- 4.1.1 In the following sections the national, local planning and local transport policy and guidance that are relevant to the NDR scheme application are presented and summarised.
- 4.1.2 The NDR is key to the Norwich Area Transportation Strategy (NATS – see **Section 4.5** below for more detail), allowing the development of a modern, sustainable transport system for Norwich, including Bus Rapid Transit and facilities for cyclists and pedestrians. Government support for the road is conditional up progress of City Centre measures.
- 4.1.3 The purpose of the NDR is explained in the Needs Case which is included in the **Environmental Statement** (doc ref 6.1). It also sets out the reasoning and justification as to why the NDR scheme is needed. This TA chapter should be read in conjunction with the Needs Case.

4.2 Norwich's City Deal

- 4.2.1 It was agreed in February 2013 that work should start on negotiating a City Deal for Greater Norwich as part of the Cabinet Office's programme to work with 20 towns and cities as a second wave of City Deals. Since this time, a great deal of work has been done with Broadland, Norfolk County and South Norfolk Council partners on a plan to develop a greater Norwich approach. It is anticipated that the Deal will be announced on 12 December 2013.
- 4.2.2 The Greater Norwich City Deal has three strands: Skill, Business support and Infrastructure. Through a coordinated approach to the 3 strands the City Deal promotes increased economic growth.
- 4.2.3 The infrastructure strand identifies the timely delivery of NDR and NATS as important key to achieving our economic growth Aspirations. The City Deal governance will focus the partners' combined efforts to ensure the required infrastructure including the NDR is delivered.

4.3 National Policy Context

National Planning Policy Framework

- 4.3.1 National Planning Policy Framework (NPPF) was published on 27th March 2012 setting out the Government's planning policies, how these are expected to be applied, and which must be taken into account as material planning considerations in planning decisions. It is of note that the NPPF supersedes the majority of previous National Planning Guidance including (but not limited to) PPG13: Transport, PPS4: Planning for Sustainable Economic Growth, PPG24: Planning and Noise, PPS25: Development and Flood Risk.
- 4.3.2 The need to deliver sustainable development underlies the NPPF through the mutually dependent economic, social and environmental roles. Within the Core Planning Principles (para 17) planning decisions should be generally plan-led, empowering local people to shape their surroundings with succinct local and neighbourhood plans setting out a positive vision for the future of the area. The need to proactively drive and support sustainable economic development and to objectively identify and then meet the housing, business and other development needs for an area are stressed.
- 4.3.3 Sustainability also involves:
- Securing high quality design;
 - Ensuring a good standard of amenity supporting the transition to a low carbon future in a changing climate taking full account of flood risk;
 - Promoting mixed use developments;
 - Recognising that some open land can perform many functions (such as for wildlife, recreation and flood risk mitigation).
- 4.3.4 Importantly the last 2 bullet points in paragraph 17 require developments to influence patterns of growth to make the fullest possible use of public transport, walking and cycling, and take account of and support local strategies to improve health, social and cultural well-being, and to deliver sufficient community and cultural facilities and services to meet local needs. A key tool to facilitate sustainable transport is via a Travel Plan. Paragraph 29 of NPPF states that: *“Transport policies have an important role to play in facilitating sustainable development but also in contributing to wider sustainability and health objectives. Smarter use of technologies can reduce the need to travel. The transport system needs to be balanced in favour of sustainable transport modes, giving people a real choice about how they*

travel. However, the Government recognises that different policies and measures will be required in different communities and opportunities to maximise sustainable transport solutions will vary from urban to rural areas.”

- 4.3.5 NPPF Paragraph 31 also identifies that: “Local authorities should work with neighbouring authorities and transport providers to develop strategies for the provision of viable infrastructure necessary to support sustainable development, including large scale facilities such as rail freight interchanges, roadside facilities for motorists or transport investment necessary to support strategies for the growth of ports, airports or other major generators of travel demand in their areas.”
- 4.3.6 NPPF Paragraph 32 requires all developments that generate significant amounts of movement to be supported by a Transport Statement or Transport Assessment. It continues that plans and decisions should take account of whether:
- “the opportunities for sustainable transport modes have been taken up depending on the nature and location of the site, to reduce the need for major transport infrastructure”;
 - “safe and suitable access to the site can be achieved for all people”; and
 - “improvements can be undertaken within the transport network that cost effectively limit the significant impacts of the development. Development should only be prevented or refused on transport grounds where the residual cumulative impacts of development are severe.”
- 4.3.7 NPPF Paragraph 37 seeks to achieve a balance of land uses within the area so that people can be encouraged to minimise journey lengths for: employment, shopping, education and other activities.
- 4.3.8 Based on the above review of NPPF, it is considered that the implementation of NDR is in line with the policies set out in this document.

The Future of Transport - A Network for 2030

- 4.3.9 The ‘Future of Transport - A Network for 2030’ White Paper published in July 2004 sets out the Government’s aspirations to meet the shared priority for transport. It recognises that a transport network is needed that can meet the challenges of a growing economy and the increasing demand for travel, but can also achieve its environmental objectives. This means providing a coherent transport network with:

- The road network providing a more reliable and freer flowing service for both personal and freight travel, with people able to make informed choices about how and when they travel.
- The rail network providing a fast, reliable and efficient service, particularly for inter-urban journeys and commuting into large urban areas.
- Bus services which are reliable, flexible, convenient and tailored to local needs.
- Making walking and cycling a real alternative for local trips.
- Ports and Airports providing improved international and domestic links.

4.3.10 Paragraph 10 of the white paper refers to the strategy of improving and enhancing road networks by:

- Providing new capacity where it is needed, assuming that any environmental and social costs are justified;
- Locking in the benefits of new capacity through various measures
- Government leading the debate on road pricing and its capacity to lead to better choices for motorists;
- Better management, exploiting the potential of new technology to avoid problems and deal with them rapidly if they occur; and
- Use of new technology to keep people informed both before and during their journey.

4.3.11 Based on the above review of the White Paper, it is considered that the implementation of NDR is in line with the aims set out in this document.

Local Transport White Paper 2011

4.3.12 The Local Transport White Paper titled Creating Growth, Cutting Carbon – Making Sustainable Local Transport Happen was published by DfT in January 2011. It contains the following four key statements in its executive summary:

- “Our vision is for a transport system that is an engine for economic growth, but one that is also greener and safer and improves quality of life in our communities.”
- “Encouraging sustainable local transport choices depends on local solutions”
- “The Government has already taken significant steps to hand back responsibility for developing local solutions in planning and the economy to the local level”
- “In addition, we also recognise that there are some initiatives that benefit from a single national approach”

- 4.3.13 The government considers that investment in transport is not enough in itself but that measures need to be put in place enabling people to make the right transport choices.
- 4.3.14 The paper also advocates the decentralisation of power to the more local level and to enable local delivery of schemes and measures. A number of funding options for transport schemes have been put in place such as the Local Sustainable Transport Fund (LSTF).
- 4.3.15 Within the paper, the government is making a number of specific national commitments to enhance the sustainability of local transport. These include amongst others: commitment to active travel, making public transport more attractive, to enable sustainable transport options, to base investment decisions on carbon implications and to tackle congestion.
- 4.3.16 Based on the above review of the White Paper, it is considered that the implementation of NDR is in line with the key statements and national commitments set out in this document.

Action for Roads 2013

- 4.3.17 The Action for Roads – A Network for the 21st Century was published by DfT in July 2013. It contains the following four key headings in its executive summary:
- “The growing challenge” referring to the vital importance of the road network and its importance in providing economic benefits. It goes on to underline the importance of making “best use of the network we have” and “to plan ahead to help the economy grow”.
 - “Transforming strategic roads” where the document refers to the upgrade and maintenance of the strategic road network.
 - “Managing our roads” referring to the key conclusions of the Cook Review which provides funding certainty and a reorganisation of the Highways Agency.
 - “Supporting local roads” referring to the decentralisation of decision making.
- 4.3.18 Based on the review of the above paper, it is considered that the implementation of NDR is in line with the four key headings set out in this document.

National Policy Statement for the National Road and Rail Networks (NPS) – Consultation Draft

- 4.3.19 A draft version of the NPS was presented for consultation in December 2013. The document sets out “the Government’s vision and policy for the future development of nationally significant infrastructure projects on the national road and rail networks.” (paragraph 1.1, page 5). With five key chapters, the document sets out the importance of road and rail infrastructure in terms of economic growth, sustainability, accessibility and assessment principals.
- 4.3.20 The NPS makes reference to the National Strategy Framework for Road Safety (Department for Transport, May 2011). This document “sets out the strategic framework for road safety and the package of policies ... to reduce deaths and injuries ...” (paragraph 1.3, page 13). Across six chapters, trends, empowering local citizens, education, targeted enforcement and sanctions and casualty forecasts are detailed. The document does not provide any guidance on how to undertake safety reviews.
- 4.3.21 Based on the review of the above paper which is still a consultation draft, it is considered that the implementation of NDR is in line with the vision and policy set out in this document.

4.4 Local Planning Policy context

Joint Core Strategy

- 4.4.1 Following the Joint Core Strategy’s (JCS) adoption in March 2011, it was subject to a legal challenge which resulted in certain parts of the JCS being remitted and treated as not having been adopted. Norfolk County Council with Broadland District Council, Norwich City Council and South Norfolk Council, working as the Greater Norwich Development Partnership (GNDP), submitted the remitted parts of the JCS to the Secretary of State for independent examination in February 2013. The Inspector reported in November 2013 that the remitted JCS (with some further modifications) was sound. The Councils have indicated that the remitted JCS is likely to be adopted in January 2014.
- 4.4.2 The JCS sets out the long-term vision and objectives for the area, including strategic policies for steering and shaping development. It identifies broad

locations for new housing and employment growth and changes to transport infrastructure and other supporting community facilities, as well as defining areas where development should be limited. It helps co-ordinate and deliver other services and related strategies.

- 4.4.3 The JCS forms part of each council's Local Plan. Subsequent documents will be produced by the individual authorities that will provide more detailed development management policies and will also allocate sites for new developments.
- 4.4.4 Based on the review of the above strategy, it is considered that the implementation of NDR is in line with the vision and objectives set out in this document.

Norwich Northern City Centre Area Action Plan

- 4.4.5 On 30 March 2010 Norwich City Council adopted the Northern City Centre Area Action Plan (NCCAAP). This document now forms part of the planning policy framework for the council and will be used when determining planning applications in this part of the city.
- 4.4.6 The NCCAAP contains policies and proposals for the regeneration of the area and redevelopment of specific sites over the period 2008-16. The NCCAAP area is that bounded by the River Wensum, Bakers Road, Magpie Road, Bull Close Road, and Whitefriars.
- 4.4.7 The northern city centre area is Norwich City Council's priority area for regeneration. The area is likely to see significant change as several new developments come forward in the next few years. This area action plan sets out proposals and policies to bring about the regeneration of the area up to 2016. The largest new development is the prospective redevelopment of the Anglia Square complex and the adjoining vacant sites.
- 4.4.8 The NCCAAP sets out the vision and objectives for the area. It emphasises that the plan has been developed consistently with existing adopted local plan policies (the City of Norwich replacement local plan) and the Joint core strategy.
- 4.4.9 The plan aims to encourage a mix of development, cultural & leisure activities, promoting a mix of development, specifically:
- Encourage a balance of housing, with family housing included in the redevelopment schemes brought forward

- Promote mixed use development in the core of the northern city centre area, reinvigorating its economy by providing jobs as well as housing
 - Encourage cultural and leisure activities in the area
 - Strengthen its local distinctiveness from the rest of the city centre
 - Improve the area's shopping offer, including the range of small independent shops
- 4.4.10 To help inform and shape the plan, consultation and sustainability appraisal were carried out throughout the plan's production. Two stages of formal consultation on the content of the plan were held; the issues and options stage in summer 2006 and the referred options in winter 2007-08.
- 4.4.11 In winter 2008-09 the regulation 27 consultation on soundness took place and to address issues raised a further consultation was held on the focused changes in late spring 2009. The area action plan is scheduled to be regularly reviewed to ensure that it remains consistent with the Joint Core Strategy as the JCS evolves.
- 4.4.12 Whilst the NCCAAP is predominantly a development focused planning framework, it does make reference to specific infrastructure and transport related measures, namely:
- Improvements to traffic circulation to address air quality issues in the St Augustine's Street area;
 - Make major improvements to the public realm in the NCCAAP area;
 - Enhance pedestrian and cycle movement by provision of new pedestrian crossing facilities, and
 - Creation of new pedestrian and cycle links throughout the area.
- 4.4.13 Improvements to traffic circulation and reduction in air pollution are required in order to implement the air quality strategy and address the reasons for the designation of an air quality management area in St Augustine's Street.
- 4.4.14 The area action plan's proposals relating to traffic circulation are in accordance with the Norwich area transportation strategy (NATS)⁷ action plan and the Local transport plan (LTP), and as such, whilst not directly part of the NDR scheme, will play a part in the overall transportation strategy for the area.

4.5 Local Transport Policy Context

Norfolk's Third Local Transport Plan (2011 to 2026)

- 4.5.1 Norfolk's Third Local Transport Plan (LTP) was adopted in March 2011. Known as 'Connecting Norfolk', LTP3 sets out the County's strategy and policy framework for delivery of transportation schemes up to 2026. It will be used as a guide for transport investment and considered by other agencies when determining planning or delivery decisions.
- 4.5.2 Connecting Norfolk's vision is to develop a transport system that allows residents and visitors a range of low carbon options to meet their transport needs and attracts and retains business investment in the county. Six strategic aims underpin this vision:
- Maintaining and managing the highway network
 - Delivering sustainable growth
 - Enhancing strategic connections
 - Reducing emissions
 - Improving road safety
 - Improving accessibility
- 4.5.3 This will be done by:
- Making the best use of what Norfolk has to facilitate reliable journeys
 - Reducing the need to travel
 - Influencing others and ensuring transport is integrated into development plans
 - Working with communities and Norfolk's partners to seek new solutions and new ways of delivering
 - Lobbying for and pursuing improvements to Norfolk's strategic transport network.
- 4.5.4 Connecting Norfolk identifies the Norwich Northern Distributor Road as a key tool to facilitate and deliver the above objectives and aims, noting specifically that it will:
- Play a significant role in delivering the significant growth in Norfolk during the life of Connecting Norfolk
 - Enhance strategic connections by facilitating strategic access to north-east Norfolk and Norwich Airport
- 4.5.5 Based on the above review of the LTP, it is considered that the implementation of NDR is in line with the aims and objectives set out in this document.

Norwich Area Transportation Strategy (NATS)

- 4.5.6 The most recent iteration of the Norwich Area Transportation Strategy (NATS) was adopted by the local authorities in 2004. The transport strategy was designed to help deliver the growth that will happen within the Norwich Area and address the problems, such as congestion. The strategy should ensure that Norwich develops as a sustainable urban community, with a transport system that meets its needs. The strategy promotes travel choice, recognising the need to maintain the economic health of the Norwich Area, and does not propose radical restrictions on vehicular access. It carries forward the previous policy of accommodating the growth in number of trips by means other than the car. NATS4 will achieve this through promotion and improvements of other modes, including public transport.
- 4.5.7 A Northern Distributor Road is identified as an important element to enable growth within and around Norwich. The strategy states that a new road will be delivered in conjunction with other measures, to lock in the benefits, and that the road will allow the full package of NATS interventions to be delivered.
- 4.5.8 NATS has been successful to date in controlling the way Norwich has developed its transport infrastructure and this has included provision of the nationally recognised Park & Ride facilities and the award winning bus station. However the success of NATS is likely to be compromised in the future if significant efforts are not made to continue to deliver its objectives.
- 4.5.9 The main aims of NATS4 are to:
- Promote a vibrant city centre, and other commercial centres, by improving accessibility for people and goods;
 - Cater for the travel consequences arising from growth aspirations. In particular, accommodate transport needs arising from future growth of the airport and the cluster of the Norwich Research Park, University and hospitals at Colney;
 - Maximise transport choice for all travellers;
 - Reduce social exclusion through transport solutions and promote equal access to jobs, goods and services;
 - Enhance access for non-car modes, promote sustainable means of travel, minimise the length of trips and encourage reduced car-use through land use policies, layout of development and promotion of travel plans;
 - Improve integration and interchange;
 - Reduce the need to travel;
 - Minimise congestion and delays for all modes of transport by improving the efficiency of the transport network;

- Reduce CO2 emissions from transport by encouraging sustainable modes of travel and vehicles using fuels derived from renewable sources or waste;
- Promote the use of alternative modes of transport and less polluting fuels, particularly within Air Quality Management Areas;
- Minimise noise, vibration and visual intrusion from transport, particularly in the public, urban open spaces in the historic city centre;
- Implement transport solutions that protect open space, wildlife habitats and water resources;
- Maximise safety and security for everyone;
- Minimise the number and severity of road traffic accidents.

- 4.5.10 In March 2010, NCC agreed a NATS Implementation Plan (NATSIP) for the future vision of NATS and what that would consist of, in particular in respect of delivering improvements for public transport, walking and cycling. The NATSIP was agreed following extensive consultation in 2009, whereby 160,000 booklets were distributed showing the most significant proposals for improving transport within the Norwich area and a series of exhibitions were held.
- 4.5.11 In addition to the NDR, the proposals considered in the NATSIP included public transport Bus Rapid Transit Corridors, Core Bus Route improvements, bus ticketing and bus facility improvements, measures to reduce the dominance of traffic in certain areas of the City Centre and improvements to the walking and cycling network and facilities.
- 4.5.12 More recently, in November 2013, an updated Implementation Plan was adopted taking into account progress with scheme delivery. The update outlined the relationship between NATS schemes and the wider growth and development agenda taking account of the implications of emerging funding opportunities including the Community Infrastructure Levy. The major difference between the NATSIP adopted in 2010 and the update was in the phasing of delivery of the schemes.
- 4.5.13 The implementation of NDR being an intrinsic part of the above strategy, it is considered that the scheme is entirely in line with the aims set out in this document.

4.6 Alignment with National and Local Policy

- 4.6.1 The implementation of the NDR scheme as part of the NATS strategy have been considered for their alignment with National and Local policies. The NDR scheme is considered to be fully in line with the key policies and guidance set out earlier in this section.

5 Existing Network Description

5.1 Route Network Hierarchy

5.1.1 A route Hierarchy exists for the whole of Norfolk. This identifies roads according to their function and level of use. It was developed by NCC to manage the highway network and to enable measures to be implemented to encourage road users to use the most appropriate routes. The hierarchy consists of:

- Trunk Roads;
- Principal Routes – used to carry the majority of through traffic;
- Main Distributor Routes– used for the distribution of more local traffic, particularly between Principal Routes;
- HGV Routes – used to distribute traffic to specific areas associated with freight delivery (generally industrial estates) from Principal Routes and Main Distributor Routes;
- Local Access Routes – linking the more significant communities with Trunk and Principal Routes, Main Distributor Routes and HGV routes; and
- Tourist Routes – links the recognised tourist attractions with all other types of routes.

5.1.2 NCC’s existing route Hierarchy is shown in **Appendix C.2** of this TA. It will need to be updated to reflect the provision of the NDR and the resulting changes to the highway network.

5.2 Description of Key Routes

5.2.1 The key routes described below are shown in **Appendix C.2** and **C.3**.

5.2.2 The **A47(T)** is a trunk road within Norfolk County Council’s Route Hierarchy. It is the main east west route across northern East Anglia connecting Great Yarmouth on the eastern coastline via the southern side of Norwich to the A1 at Peterborough for onward journeys to the north. The A47(T) is a trunk road as far as the A1. Within the study area the A47(T) is largely dual carriageway with grade separated junctions.

5.2.3 The main route that spans across the radial routes is the Norwich **Outer Ring Road** (A1042/A140/A146). This road is predominantly single carriageway, comprising many signalised junctions.

5.2.4 The **A147 Inner Ring Road** is classed as a Principal Route within NCC’s Route Hierarchy. Generally, the western side of the ring road between

A1151 and Finklegate is dual carriageway with 2 traffic lanes in each direction. The eastern side is mainly single carriageway.

- 5.2.5 Norwich has 12 radial routes which provide access from all directions to the city. Most of them are single carriageway with few sections of dual carriageway; some sections comprise a total of three lanes, for example to provide a bus only lane in a single direction. These are also shared with taxis and cyclists. On approaches to the city via the A11 radial route, the bus lanes are also used by freight operators as part of the freight consolidation delivery service.
- 5.2.6 The paragraphs below provide an overview of the radial routes.
- 5.2.7 The **A1067** Drayton High Road / Fakenham Road is classified as a Principal Route within NCC's Route Hierarchy. It links the A147 Inner Ring Road on the north-western side of Norwich with the A148 near Fakenham.
- 5.2.8 **Reepham Road** is a Local Access Route within NCC's Route Hierarchy from the Outer Ring Road to Hellesdon. Within the study area of this TA the route is single carriageway.
- 5.2.9 The **A140** Aylsham Road / Cromer Road / Holt Road is classified as a Principal Route within NCC's Route Hierarchy. The A140 runs between the A14 north of Ipswich to Cromer on the coastline via the western side of Norwich. Within the study area, the route is predominantly single carriageway with at-grade junctions. Additional traffic lanes are present on approach to the main junctions on the route.
- 5.2.10 The **B1149** Holt Road is classified as a Main Distributor Route within the NCC's Route Hierarchy. The route runs from its junction with the A140 and continues until it meets the A148 at Holt. Within the study area of this TA the route is single carriageway.
- 5.2.11 The **B1150** Constitution Hill / North Walsham Road is classified as a Main Distributor Route within the NCC's Route Hierarchy. The route starts at the junction with the A1151 on the north side of the City Centre and continues in a generally northbound direction until it meets the A149 in North Walsham. Within the study area of this TA, the route is single carriageway.
- 5.2.12 The **A1151** Wroxham Road / Sprowston Road is classified as a Principal Route within NCC's Route Hierarchy. The route starts at the junction with the A147 (Inner Ring Road) on the northern side of Norwich City Centre and continues in a generally north-eastbound direction until it becomes the A149.

Within the study area of this TA the route is single carriageway. There is an inbound bus lane from Recreation Ground Road to the approach of its junction with the ORR.

- 5.2.13 **Salhouse Road** is classified as a Local Access Route within NCC's Route Hierarchy between the A1042 Outer Ring Road and Rackheath. Within the study area of this TA the route is single carriageway.
- 5.2.14 The **B1140** Plumstead Road is classified as a Local Access Route within NCC's Route Hierarchy between the Inner Ring Road and Outer Ring Road. Beyond the Outer Ring Road it is classified as a Local Access Route to Thorpe End. Within the study area of this TA the route is single carriageway.
- 5.2.15 The **A1242** Thorpe Road / Yarmouth Road is classified as a Principal Route within NCC's Route Hierarchy. The route commences at the Inner Ring Road and continues in an easterly direction. At its junction with the Outer Ring Road it becomes the **A1042** from where it continues to the A47(T) at Postwick. Between the City Centre and Postwick, Yarmouth Road is single carriageway except for a short section of dual carriageway south of the Postwick junction with the A47(T).
- 5.2.16 The **A146** Loddon Road is classified as a Principal Route within NCC's Route Hierarchy. The route commences at Norwich's Outer Ring Road and continues in a south easterly direction to form a junction with the A47(T) and continues to Lowestoft. To the north of the A47(T), the A146 is dual carriageway, while to the south it is single carriageway.
- 5.2.17 The **A140** Ipswich Road is classified as a Principal Route within NCC's Route Hierarchy. The route commences at Norwich's Outer Ring Road and continues in a southerly direction to form a junction with the A47(T) and continues to the A14 and Ipswich. Within the study area of this TA the route is single carriageway.
- 5.2.18 The **A11** Newmarket Road / St Stephens Road is classified as a Principal Route within NCC's Route Hierarchy. The route commences at Norwich's Inner Ring Road and continues in a south westerly direction to form a junction with the A47(T). Beyond this, the A11(T) extends via Newmarket to the M11. Within the study area of this TA the route is largely single carriageway. However, from a point approximately half way between the Outer Ring Road and the A47(T), the A11 to the west is dual carriageway. Along the A11, there are two inbound bus lanes (Unthank Road to approach

with ORR junction, Mt Pleasant to approach with IRR junction) and one outbound bus lane (Mt Pleasant to approach with ORR junction).

- 5.2.19 The **B1108** Earlham Road / Watton Road is classified as a Main Distributor Route within NCC's Route Hierarchy. The route commences at Norwich's Inner Ring Road and continues in a westerly direction to form a junction with the A47(T). To the west of this, Watton Road extends via Hingham and Watton. Within the study area of this TA the route is predominantly single carriageway. There is an inbound bus lane between Heigham Grove and the approach to IRR.
- 5.2.20 The **A1074** Dereham Road is classified as a Principal Route within NCC's Route Hierarchy. The route commences at Norwich's Inner Ring Road and extends to the north west to form a junction with the A47(T) at Longwater. Within the study area of this TA the route is predominantly single carriageway. There is an inbound bus lane between Gurney Road and the approach to the Outer Ring Road and an inbound bus lane between Orchard Street and the approach to the Inner Ring Road.
- 5.2.21 The Inner Ring Road is limited to 30mph for its entire length, while the speed limit along the Outer Ring Road comprises a mixture of 30mph and 40mph sections. All sections of the Inner Ring Road are within built-up areas of the city; the Outer Ring Road passes through a mix of housing, employment and retail areas.
- 5.2.22 Routes across the city centre within the Inner Ring Road are all single carriageway comprising one-way sections.

5.3 Description of Key Junctions

- 5.3.1 Along the dual carriageway sections of the A47(T), junctions are generally grade separated or of good standard and provide adequate visibility for traffic turning from the minor arms onto the mainline. They provide acceptable levels of capacity for current levels of traffic at all but the Postwick interchange.
- 5.3.2 The single carriageway roads are characterised by many small junctions and minor turnings.
- 5.3.3 The County and City roads associated with the main road network reflect the medieval street pattern that forms a large part of the network in the centre of Norwich, with the majority of junctions being significantly constrained by ancient buildings thereby removing any opportunity for capacity to be

increased through enlarging the junction geometry or adding additional lanes on congested roads. Such junctions do not have the scope to be radically altered to meet increased demand and hence only minor improvements have been possible. Within Norwich, the constraint on land in the vicinity of junctions has led to many becoming signal controlled, comprising layouts which have been adapted as far as possible to cope with traffic volumes and vehicle sizes. Many of the junctions have been upgraded to include pedestrian and cycle crossing facilities in order to provide coherent routes for vulnerable road users wherever possible.

5.3.4 The existing junctions that are assessed within **Chapter 8** of this TA are:

- A47(T) / A146 Trowse Junction
- A146 / Martineau Lane
- A147 Bracondale / King Street
- N1150 North Walsham Road / Rackheath Lane (Crosthwick Junction)
- A1151 Wroxham Road / Green Lane West (Rackheath Junction)

A47(T) / A146 Trowse

Photo 5.1 Existing Junction Layout – A47(T) / A146 South-Eastern Junction

Source: Mott MacDonald Ltd, 24 October 2013, for location see Appendix C.3

5.3.5 The intersection of the A47(T) / A146 Loddon Road is a four arm grade separated traffic signal controlled junction. The A47(T) runs north-east to south-west; the A146 runs north-west to south-east and is dual carriageway in the vicinity of this junction. To the north-west and south-east of the A47(T), its slip roads form two signal controlled junctions with the A146. The two arms of the A146 comprise three lanes, but on approach to each junction, vehicles turning left to the A47(T) are provided with a short flared left turning

lane, which bypasses the traffic signals and is priority controlled. Vehicles turning right to the A47(T) are provided with a two lane flared right turning facility, which is signal controlled. The A47(T) off-slips each comprise two lanes, which widen on approach to the junction to provide a total of four lanes, including two for the left turn. All arms of the junction are subject to national speed limit. The eastern arm of the A47(T) and both arms of the A146 form a bus route.

- 5.3.6 The junction model results for the existing scenario, detailed within **Chapter 8** of this TA, show that this junction currently operates within capacity limits during the AM and PM peak hours. During the AM peak hour, the heaviest queuing occurs at the junction of the A146 (northbound approach) and A47(T) westbound off-slip, for inbound movements to the City. During the PM peak hour, the heaviest queuing occurs at the junction of the A146 (southbound approach) and the A47(T) eastbound off-slip, for outbound movements from the City.

A1054 Martineau Lane / A146 Trowse Bypass

Photo 5.2 Existing Junction Layout – Martineau Lane / Trowse Bypass

Source: Mott MacDonald Ltd, 23 October 2013, for location see Appendix C.3

- 5.3.7 The intersection of the A1054 / A146 is a three arm traffic signal controlled junction. The A1054 Martineau Lane forms the north-eastern arm, the A146 (link to the A47(T)) forms the south-eastern arm and A146 Martineau Lane forms the western arm. A short distance to the west of the junction, the A146 Martineau Lane becomes Barrett Road. The A1054 Martineau Lane provides a single lane in the southbound direction, which on approach to the junction widens to form two lanes for the left turn to the A146 and two lanes for the

ahead movement to the A146 Barrett Road. The A146 (link to the A47(T)) is a dual carriageway, comprising two lanes in each direction and is subject to a 40mph speed limit on the approach to the junction where the highway flares to provide two lanes for the left turn towards the A146 Barrett Road and the two lanes on the main carriageway form the right turn towards the A1054 Martineau Lane. The A146 Barrett Road comprises a single lane in each direction, which on approach to the junction flares locally to provide a single lane for the ahead movement to the A1054 Martineau Lane and two lanes for the right turn towards the A146 (link to the A47(T)). The links forming the junction are subject to a 40mph speed limit, however a signed change of speed limit from 30mph is located a short distance to the south-west of the junction along A146 Barrett Road. Traffic signal controlled pedestrian crossing facilities are provided on the A146 (link to the A47(T)) approach and the A146 Barrett Road approach. The A146 (link to A47(T)) and A1054 Martineau Lane form a bus route.

- 5.3.8 The junction model results for the existing scenario, detailed within **Chapter 8** of this TA, show that this junction currently operates within capacity limits during the AM peak hour, but at capacity limits during the PM peak hour, which results in a significant queue occurring on the left turn from Martineau Lane (westbound) during the PM peak hour.

A147 Bracondale / King Street

Photo 5.3 Existing Junction Layout – Bracondale / King Steet

Source: Mott MacDonald Ltd, 23 October 2013, for location see Appendix C.3

- 5.3.9 The intersection of A147 King Street / A147 Bracondale is a three arm traffic signal controlled junction. Bracondale runs east-west, while King Street

extends north-south. The A147 Bracondale is a bus route and all three arms of the junction form cycle routes, namely the Outer Circuit and NCN Route 1. No signal controlled pedestrian facilities are provided at this junction despite this being a main route out of the city centre to County Hall.

- 5.3.10 The junction model results for the existing scenario, detailed within **Chapter 8** of this TA, show that this junction currently operates well above capacity limits during the AM peak hour, but within capacity limits during the PM peak hour, though regular observation shows that it also frequently overcapacity in the PM peak. Significant queuing occurs on the right turn approach from Bracondale (East) in both peak hours. This is most problematic during the AM peak hour, when the inbound queue can extend back as far as the County Hall roundabout to the south. King Street nears capacity during the AM peak and hence significant queuing occurs on this approach. Substantial queuing also occurs on the Bracondale (West) approach in the AM peak hour, because the junction as a whole is over capacity.

North Walsham Road / Rackheath Lane (Crostick Junction)

Photo 5.4 Existing Junction Layout – North Walsham Road / Rackheath Lane

Source: Mott MacDonald Ltd, 22 October 2013, for location see Appendix C.3

- 5.3.11 The intersection of the B1150 North Walsham Road / Crostick Lane / Rackheath Lane is a four arm staggered priority controlled ghost island junction. North Walsham Road forms the northern and southern arms of the junction. Crostick Lane forms the western arm and Rackheath Lane forms the eastern arm, separated by approximately 20m. Each of the arms of the junction comprises a single lane approach; however the ghost island along North Walsham Road accommodates short storage lanes in each direction

for right turning vehicles. North Walsham Road is subject to a 50mph speed limit and Rackheath Lane a 60mph speed limit. Crostwick Lane is subject to a 30mph speed limit and vehicles greater than 7.5 tonnes in weight are prohibited from using this road, except for loading.

- 5.3.12 The junction model results for the existing scenario, detailed within **Chapter 8** of this TA, show that this junction currently operates well within capacity limits during the AM and PM peak hours and hence there are no operational issues.

A1151 Wroxham Road / Green Lane West (Rackheath Junction)

Photo 5.5 Existing Junction Layout – Wroxham Road / Green Lane West

Source: Mott MacDonald Ltd, 22 October 2013, for location see Appendix C.3

- 5.3.13 The intersection of the A1151 Wroxham Road / Green Lane West is a three arm priority controlled junction. Wroxham Road forms the north-eastern and south-western arms of the junction, while Green Lane West extends to the south east and forms the minor arm. Each arm of the junction comprises a single lane approach. Wroxham Road is subject to a 50mph speed limit, while Green Lane West is subject to a 40mph speed limit. The required 2.4m x 160m visibility to the left from Green Lane West is obscured by the presence of vegetation along the north side of Wroxham Road. In mitigation, road signage is present warning eastbound motorists of the likelihood of traffic turning ahead. The provision of adequate visibility at this junction is reliant upon the vegetation being regularly maintained. Green Lane West and the northern arm of Wroxham Road form a bus route.
- 5.3.14 The junction model results for the existing scenario, detailed within **Chapter 8** of this TA, show that this junction currently operates within capacity limits

during the AM and PM peak hours and hence there are no operational issues. However, the right turn out from Green Lane West approaches limits of capacity during the PM peak hour, which results in a small queue developing.

5.4 Airport Surface Access

- 5.4.1 Norwich International Airport is located 4 miles to the north of Norwich city centre with access provided by the **A140** Aylsham Road / Cromer Road / Holt Road and via the Outer Ring Road. There is presently no direct connection to the Strategic Road Network linking the airport to the A47(T).
- 5.4.2 A Park and Ride facility located at the airport provides a link to Norwich City Centre; bus service 603 provides a regular service. First Eastern and National coach services also serve the airport.
- 5.4.3 The airport currently has a throughput of over 400,000 passengers per year. 70% of passengers originate from the Norfolk area, 25% originate from Norwich itself. Currently 73% of passengers arrive by car, 20% by taxi and with the remainder using other public transport. Forecast for passenger growth is 6% per annum over the next 10 years.
- 5.4.4 Airlines operating from the airport include Flybe, KLM, Eastern Airways and bmi regional. These airlines offer flights to UK airports including the Channel Islands and to European destinations such as the Balearics and Canaries with several of the destinations being seasonal.
- 5.4.5 The airport is also an important location in connection with the off-shore industry with helicopter flights having increased significantly (Norwich Airport website stating “some 40 departures on a daily basis to the platforms offshore”, as of May 2012). On the same page it is stated that total passenger numbers have increased from just over 29,000 in 2002/03 to over 77,000 in 2011/12.
- 5.4.6 Norwich Airport is also an increasingly important business location with the first phase of the Norwich Aeropark having been permitted in July 2013 providing employment and industrial facilities for Air Livery aircraft painting firm including the company’s headoffice.

6 Sustainable Transport

6.1 Bus

- 6.1.1 Norwich is comparatively well served by bus services with a range of service providers including Anglianbus, First Norfolk & Suffolk, Konectbus, Norfolk Green and Sanders.
- 6.1.2 Most bus and coach services run from Norwich bus station and/or from Castle Meadow as shown in the key bus route map which is included in **Appendix C.4**. In addition, Norwich has six Park & Ride sites run by Norfolk County Council using colour-coded buses, making Norwich's Park & Ride scheme one of the largest bus-based UK operations, providing over 5000 parking spaces.
- 6.1.3 The majority of public bus services operate in the urban areas and run mainly on radial routes into / out of the city centre, with many routes providing cross-city links. These offer good frequency services within the built-up areas during the day and in the evenings, although these can be hampered by traffic congestion in peak periods. The bus route linking the Norfolk and Norwich University Hospital and the University of East Anglia (UEA) to the railway station via Norwich city centre operates 24 hours a day.
- 6.1.4 Most services operate on radial routes. This may result in passengers having to change buses within the centre for journeys around the city, making trips more time consuming and potentially costly. Outside of the built-up area there are services to the surrounding market towns, but these tend to run on much lower frequencies.
- 6.1.5 There are a number of interchange points for onward bus or pedestrian journeys with the main ones in the city centre being on-street in Castle Meadow, St Stephens Street and at Anglia Square, and off-street at the bus and railway stations and at Park & Ride sites. Interchange points are also present at the airport, the hospital and UEA. A new bus station in Norwich city centre was opened in 2005 as part of a £10m major project that involved improved public transport links (including a bus priority route) between the bus and railway station.
- 6.1.6 The main bus services on the core network in the NDR corridor are highlighted in the key bus route map which is included in **Appendix C.4**.

1 Key Summary

1.1 Overview

- 1.1.1 This report describes the traffic forecasting work undertaken for the NDR in connection with this Development Consent Order (DCO) application under the Planning Act 2008.
- 1.1.2 The outputs of the forecasting work provide:
- The future year design traffic flows
 - Traffic flows for operational appraisal of the Scheme Junctions;
 - Traffic impacts across the network and in the city centre;
 - Inputs to the environmental appraisal; and
 - Inputs to the economic appraisal.
- 1.1.3 The forecasting for the Scheme used the updated Norwich Area Transport Strategy (NATS) transport model. Separate transport models were produced for the AM peak hour (08:00-09:00), an average hour in the inter-peak (10:00 – 16:00) and the PM peak hour (17:00 – 18:00). This is to ensure the traffic characteristics for different time periods are modelled accurately. The NDR Local Model Validation Reports (document reference nos. 5.9 and 5.10) describe the updating of the transport models and the calibration and validation processes.
- 1.1.4 This report explains the preparation of the future year transport networks. These include modifications to account for changes, comprising the proposed NDR, complementary traffic management measures, city centre measures, developer link roads and other proposed improvements.
- 1.1.5 The development of the demand matrices is also described. It accounts for the Joint Core Strategy (JCS) spatial allocation of development for which trip generation has been assessed using the TRICS database. The growth has been controlled using the Department for Transport's National Trip End Model (NTEM) and Road Transport Forecast (RTF) databases, but reductions have then been applied for the JCS development trip generation to account for travel plans and the trip distribution for large mixed developments. Variable demand model processes have also been applied to account for behavioural changes of trip redistribution, mode choice and frequency responses to changing travel costs. The forecasting has been undertaken in line with the Department for Transport's Web-based Transport Appraisal Guidance WebTAG (unit 3.15.1).

- 1.1.6 Forecasts are presented for the proposed opening year of 2017 and a design year of 2032 and for scenarios with and without the proposed Scheme.
- 1.1.7 The report describes the changes in traffic and network performance that would occur with the implementation of the proposed transport interventions. It sets out the substantial reductions in traffic on existing orbital routes as a result of the reassignment of strategic traffic to the NDR. There would also be substantial reductions on the proposed developer link roads which would not be appropriate routes for carrying strategic traffic. Traffic levels would be reduced on routes in the Thorpe St Andrew, Old Catton and Hellesdon suburbs, including on the Outer Ring Road. Traffic flows in the city centre would also be reduced substantially as a result of the city centre measures that could be implemented with the introduction of the NDR, though there is some displacement to the Inner Ring Road.
- 1.1.8 Traffic flows travelling through the city would be reduced significantly with the NDR. The analysis shows that through the city centre the forecast traffic in 2032 would be almost half of that in the 2012 base year as a result of city centre measures. Traffic forecasts on the Inner Ring Road would be reduced in 2017 and 2032 to levels only just higher than in the base year. On the Outer Ring Road forecast traffic would reduce to levels below those in the base year.
- 1.1.9 Journey times from the strategic road network to the Airport and the proposed development location at Rackheath would be reduced significantly with the NDR implemented. In addition there are journey time reductions on radial bus routes into the city centre with improvements to journey time reliability.
- 1.1.10 Comparison of the overall queues within the transport model shows that there will be large increases without transport improvements, but these would be significantly reduced by the implementation of the scheme.

2 Introduction

2.1 Background

- 2.1.1 Mott MacDonald (MM) has been appointed by Norfolk County Council (NCC) to assist with the development and appraisal of the Norwich Northern Distributor Road, known as the NDR or referred to as the Scheme.
- 2.1.2 The Scheme would be a dual carriageway all-purpose strategic distributor road, to be classified as the A1270 Principal Road, which would link the A1067 Fakenham Road near Attlebridge, to the A47(T) Trunk Road at Postwick. This will be over a length of approximately 20.4km.
- 2.1.3 The NDR is a project of national significance which requires a Development Consent Order (DCO) under the Planning Act 2008 and this formal planning process began in early 2013. It is currently anticipated that the process will be completed in time for the NDR scheme to start construction in 2015 and to be opened in 2017.
- 2.1.4 This document is one of a number that support the DCO, each of which has its own unique document number, and should therefore be read in conjunction with the other documentation. The proposed layout of the NDR is shown in the General Arrangement Plans contained in document number 2.6, whilst the full needs case for the NDR is explained in the Statement of Reasons (document 4.1) and the Environmental Statement (document 6.1).
- 2.1.5 To support the process of scheme appraisal, the Norwich Area Transport Strategy (NATS) transport model has been updated to a 2012 base year. The forecasting has been carried out on a Production Attraction (PA) basis, a requirement of current WebTAG guidance, and the National Trip End Model (NTEM) and Road Transport Forecasts (RTF). The forecast networks were developed on the basis of the WebTAG (unit 3.15.5) uncertainty log principles. Local development assumptions were based on the proposals for the Joint Core Strategy (JCS).
- 2.1.6 A plan of the scheme is shown in Figure B.1 in Appendix B of this Forecasting Report and further details are included in Section 4.4.

2.2 Overview of the forecasts presented

2.2.1 Traffic forecasts accounted for the JCS proposals for residential and employment developments as well as corresponding transport network changes that will provide access to the proposed developments. The forecast scenarios comprise the following:

- A set of transport network changes;
- Assumptions about changes in values of time and vehicle operating costs over time;
- A specific set of development assumptions;
- Application of National Trip End Model (NTEM) growth factors as a constraint on trip growth for private vehicle use; and
- Application of growth of freight traffic from the DfT Road Transport Forecasts (RTF).

2.2.2 The transport supply and development assumptions were arrived at through a process of identifying potential transport improvements and development proposals, and undertaking an assessment of the likelihood of each of these proposals coming forward in the context of the JCS.

2.2.3 The demand forecasting used the DIADEM variable demand modelling software forecasting procedures without and with a scheme intervention (also called Do-Minimum and Do-Something scenarios). It used a specific set of demand model parameters adjusting the sensitivity of destination, mode and frequency choices to changes in generalised cost. In addition, travel planning and distribution for new developments was taken into account.

2.2.4 The following demand forecasts were produced:

- The Reference Case which was a forecast of what is likely to happen if the travel costs remain the same in the future as in the base year i.e. it takes no account of changes in travel costs that would arise from the increased demand, or changes in fuel costs or the value of time.
- The Do-Minimum forecast which used variable demand modelling to account for changes in travel costs and the future transport network that excludes the Scheme.
- The Do-Something network which included all highway changes associated with the NDR Scheme, as well as Norwich city centre measures, and the forecast used variable demand modelling to account for changes in travel costs with this network.

2.3 Purpose and layout of Report

2.3.1 The report describes the traffic forecasts for the Scheme and sets out the assumptions on which these forecasts have been based.

2.3.2 The structure of this report is as follows:

- Chapter 3 presents an overview of the modelling system developed to assess the NDR;
- Chapter 4 documents the development of future year highway networks;
- Chapter 5 presents future year traffic growth forecasts;
- Chapter 6 provides analysis and discussion in relation to future year forecasts;
- Chapter 7 provides an analysis of effects of the NDR on traffic; and
- Chapter 8 contains a glossary of abbreviations.

3 Overall Modelling Framework

3.1 The Modelling Framework

3.1.1 The NATS transport modelling framework used to assess the NDR consists of three main elements:

- Highway Traffic Model: this is a SATURN model with 413 zones with an extensive detailed simulation area that goes beyond the main Norwich city urban area. The rest of the network is coded as a SATURN buffer network. The model has been validated to a 2012 base year.
- Public Transport Model: this is a VISUM public transport model covering bus and rail modes. The model covers the same area as the highway model plus the key rail routes into Norwich and represents the same base year of 2012.
- Demand Model: this is a DIADEM variable demand model. The model is an incremental model, and is set up in Production-Attraction format as required by WebTAG (unit 3.10.2).

3.1.2 The overall modelling framework has been developed to be consistent with the guidance set out in WebTAG (unit 3.1.1). The individual elements have been developed to be consistent with the guidance set out in WebTAG units 3.10, 3.11 and 3.19.

3.1.3 Full details of the first two model components are set out in the Highway Local Model Validation Report (document reference 5.9) and the Public Transport Local Model Validation Report (document reference 5.10). The demand model is described in this Forecasting Report.

3.2 Model Definition

Forecast Years

3.2.1 Future year traffic forecasts were developed for two years: 2017 and 2032. The future year of 2017 represents the programmed opening year of the proposed NDR, and 2032 represents the design year (15 years after scheme opening).

Time Periods

3.2.2 The highway and public transport assignment models have been developed for three time periods:

- AM Peak Hour (0800-0900hrs);
- Average Inter-Peak Hour (1000-1600hrs); and
- PM Peak Hour (1700-1800hrs).

3.2.3 An Off-Peak model representing an average hour for the period 1900 to 0700 hrs has also been developed for the purposes of demand modelling, where costs are required for all times of the day (it should be noted that this is not a fully validated model).

Demand Segmentation

3.2.4 The development of the 2012 base model produces highway assignments for five vehicle types/ user classes for each model hour at an O-D level. This representation of the demand is not sufficiently detailed to be used as inputs to the demand model for the following reasons:

- The demand model is applied to trips with an origin or destination inside the modelled area. Therefore, purely external-external trips need to be treated as fixed in a separate demand segment; and
- The home-based purposes need be modelled in PA (24 hour) format, not hourly O-D.

3.2.5 The highway demand was therefore split into ten demand segments, with five additional segments being included to model trips for PT users who have no access to a car. These fifteen demand segments are shown in Table 3.1. In addition the home-based demand segments are aggregated to a 24 hour level to be used in PA modelling.

Table 3.1: Demand Segments

User class	Vehicle Type	Description	Demand Model Segment
1	Car/ LGV/ PT	Home Based Work	Variable HBW - Car Available
2			Variable HBW - No Car Available
3	Car/ PT	Home Based Employer's Business	Variable HBEB - Car Available
4			Variable HBEB - No Car Available
5	Car/ LGV/ PT	Home Based Other	Variable HBO - Car Available
6			Variable HBO - No Car Available
7	Car/ PT	Non-Home Based Employer's Business	Variable NHBEB - Car Available
8			Variable NHBEB - No Car Available
9			Fixed NHBEB - (External-External Movements)
10	Car/ LGV/ PT	Non-Home Based Other	Variable NHBO - Car Available
11			Variable NHBO - No Car Available
12&13			Fixed NHBO & HBW - (External-External Movements)
14	LGV	Freight	Freight (LGV)
15	HGV	Freight	Freight (HGV)

3.3 Demand Modelling

3.3.1 The forecasting procedure was undertaken using DIADEM software (version 5.0). DIADEM implements variable demand modelling in line with WebTAG Unit 3.10. DIADEM does not include an assignment module; instead it relies on other software packages to carry out assignments, i.e. SATURN for the highway network and VISUM for the public transport network. The public transport and highway assignment models are external to DIADEM but the software packages exchange trip matrices and cost matrices.

3.3.2 DIADEM was set up to model the following demand responses:

- Frequency choice;
- Mode choice; and
- Re-distribution.

3.3.3 Frequency choice responses represent trip generation and trip suppression that a scheme might produce. Selection of this response is consistent with WebTAG 3.10.3 (Paragraph 1.4.3).

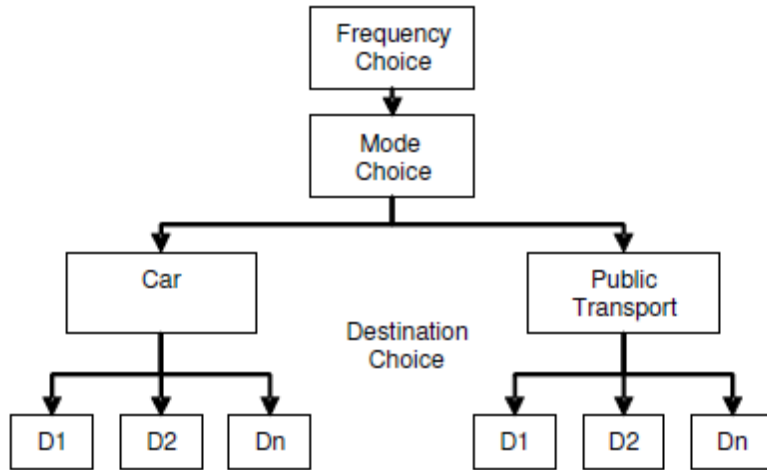

3.3.4 Mode choice represents switching of trips between public transport (PT) and highway modes of travel. This has been set up for car-available PT demand segments only.

3.3.5 Re-distribution (or destination choice) is likely to be the main demand response for the scheme. Travellers might change final destination of trips due to travel cost changes resulting from the Scheme.

3.3.6 Time period response is most relevant where a scheme imposes significant cost differences between travel during the peak period and travel during the inter-peak and off-peak periods. Substantial cost differences may result in drivers changing their period of travel. An example is a tolling regime that applies only to peak periods. It is perceived that journey time savings as a result of the scheme are likely to have a low influence on time-of-day travel. Therefore, macro time-of-day choice responses have not been modelled, in accordance with WebTAG 3.10.3 (Paragraph 1.4.13),

3.3.7 The hierarchy of response is consistent with WebTAG advice which identifies frequency (the least sensitive) at the top of the hierarchy and trip distribution (the most sensitive) at the bottom of the hierarchy. The hierarchy adopted is shown in Figure 3-1.

Figure 3-1: Hierarchy of Demand Responses

3.3.8 Demand model parameter values have been calibrated in line with WebTAG, as explained in section 6. The resultant parameter values are shown in Table 3.2. The frequency response is only applied to discretionary trips of which the 'other' trip purpose is mostly comprised.

Table 3.2: DIADEM Parameters

Journey Purpose	Highway Re-distribution	Public Transport Re-distribution	Mode Choice	Frequency
Home Based Work	-0.113	-0.033	0.68	-
Home Based Employer Business	-0.038	-0.036	0.45	-
Home Based Other	-0.074	-0.036	0.53	0.15
Non Home Based Employer Business	-0.069	-0.042	0.73	-
Non Home Based Other	-0.073	-0.033	0.81	0.15

3.3.9 A summary of the demand model set up is shown in Table 3.3. This was set up to be consistent with WebTAG requirements as set out in Unit 3.10.3 with home-based trips in Production Attraction (PA) format so that outbound and return journeys are made to have consistent destination and mode choice by modelling them as linked trips or tours. Home-Based-Work trips (HBW, also referred to as commuting trips) are doubly constrained while Home-Based-Other (HBO) are singly constrained by origin. In the singly-constrained models the trip ends are fixed for one of the trip ends, with no constraints on the other end. In the doubly-constrained models the total trip ends to and from each zone are fixed. For non-home-based trips it cannot be assumed that there are return trips so these are treated as single direction trips, and in DIADEM these are referred to as Origin Destination (OD) format (which is the same as single direction trips in PA format). Freight demand segments have been modelled as fixed OD-based demand and these are only subject to assignment in the Highway model, and it should be noted that some elements of private vehicle trips are fixed (external-external and development trips).

Table 3.3: Summary of Demand Model Set Up

Demand					Responses					
Mode	Purpose	Car Availability	Format	Time Period	Model Format	Time Period Choice	Frequency	Mode Choice	Distribution	Single/ Double constrained
		Na- not applicable CA – car available NCA non car available	PA OD	24 hour or individual time period	Incremental PA Incremental OD Fixed Excluded	Y – yes N- No	Y – yes N- No	Y – yes N- No	Y – yes N- No	S - Singly (production or origin) D – Doubly constrained Na- not applicable
Private	HBW	Na	PA	24 hr	Inc PA	N	N	Y	Y	D

	NHBO	NCA	OD	TP	Exc	N	N	N	N	Na

3.4 Forecasting Scenarios

- 3.4.1 Separate DIADEM runs have been carried out for the Do-Minimum and the Do-Something scenarios, for the two forecast years. The demand modelling assesses the changes in travel costs as a result of traffic growth, so it requires reference travel costs which are taken from the 2012 base model and used as a baseline for measuring changes in travel costs in future years.

4 Forecast Year Networks

4.1 Requirements

- 4.1.1 For forecasting purposes transport networks representing the supply and cost of transport in future years were required as a basis to assess the impact of the proposed Scheme. Future year transport supply and costs relate to changes in the transport networks, for example new transport infrastructure or public transport services, and the cost of transport e.g. car parking charges or bus fares.
- 4.1.2 Highway and public transport networks for the JCS scenario (current at April 2013) have been produced for the two forecasting years 2017 and 2032.

4.2 Built Schemes

- 4.2.1 There have been no schemes built and opened since the base model development for October / November 2012 (current at April 2013).

4.3 Do Minimum Network

Approach

- 4.3.1 Information on planned schemes in Norwich City, South Norfolk and Broadland was provided by NCC. Details on future schemes in the remaining districts of Norfolk are not included as the model detail in those outlying districts is relatively coarse, and therefore including schemes would have minimal effect in the Greater Norwich area.
- 4.3.2 Data collated on future transport proposals was tabulated and an assessment of likelihood of them proceeding was carried out in April 2013. This assessment was in line with the definitions of uncertainty contained in WebTAG unit 3.15.5; these are reproduced in Table 4.1.

Table 4.1: Classification of Future Inputs

Probability of the Input	Status
<p>Near Certain: The outcome will happen or there is a certain probability that it will happen</p>	<p>Intent announced by proponent to regulatory agencies.</p> <p>Approved development proposals.</p> <p>Projects under construction.</p>
<p>More than likely: The outcome is likely to happen but there is some uncertainty.</p>	<p>Submission of planning or consent application imminent.</p> <p>Development application within the consent process.</p>
<p>Reasonably foreseeable: The outcome may happen, but there is significant uncertainty</p>	<p>Identified within a development plan.</p> <p>Not directly associated with the transport strategy/scheme, but may occur if the strategy/scheme is implemented.</p> <p>Development conditional upon the transport strategy/scheme proceeding.</p> <p>Or, a committed policy goal, subject to tests (e.g. of deliverability) whose outcomes are subject to significant uncertainty.</p>
<p>Hypothetical: There is considerable uncertainty whether the outcome will ever happen.</p>	<p>Conjecture based upon currently available information.</p> <p>Discussed on a conceptual basis.</p> <p>One of a number of possible inputs in an initial consultation process.</p> <p>Or, a policy aspiration.</p>

4.3.3 Classifications for each input were assessed in consultation with planning and transport officers at NCC, taking into account guidance, and drawing on local knowledge.

4.3.4 All schemes that are “near certain” or “more than likely” were included in the forecast networks.

Highway Network

4.3.5 Table 4.2 shows the highway schemes identified in consultation with NCC and the uncertainty level attributed to each scheme. The year shown is the first model year when it is expected that a scheme will be implemented by (so the scheme opening date could be earlier than the model year). All the near certain or more than likely schemes are expected to be implemented by 2017, so the resultant 2017 and 2032 Do Minimum networks are identical. Locations of all the highway schemes in the uncertainty log are shown in Figure A.1 in Appendix A.

Table 4.2: Uncertainty Log – Factors Affecting Highway Supply

SI number	Input	Uncertainty	Year	Comment	Status
1	Dereham Road/ Old Palace Road and Heigham Road junction improvement	Near certain (under construction)	2017	Improvements to facilitate bus rapid transit on Dereham Road bus corridor	Local authority scheme: programmed under construction
2	A11(T) Fiveways to Thetford improvement scheme	Near certain (under construction)	2017	Dualling of the last section of the trunk road route between the M11 and Norwich	Highways Agency scheme: under construction
3	Southbound bus lane Grapes Hill	Near Certain	2017	Improvements to facilitate bus rapid transit on Dereham Road bus corridor	Local authority scheme
4	Two way on Cleveland Road and a new junction arrangement at Cleveland Road/Chapelfield North	Near Certain	2017	New Junction arrangements to facilitate Chapelfield North scheme	Local Authority scheme: budgeted and Programmed
5	Bus only on Theatre Street and Chapelfield North and removal of general traffic except buses, taxis and cyclists from Rampant Horse Street	Near Certain	2017	Part of city centre measures to reduce through traffic	Local Authority scheme: budgeted and Programmed
6	Little Bethel Street closure	Near Certain	2017	Part of Chapelfield North scheme and city centre measures	Local authority scheme: budgeted and programmed

7	St Stephens Street and Surrey Street bus only	Near Certain	2017	Part of city centre measures	Local authority scheme: budgeted and programmed
8	Traffic signal priority for buses for signals on radial routes outside of Inner Ring Road	Near Certain	2017	General Signal timing upgrades across Norwich's road network	Local authority scheme: being built
9	Development Link Broadland Business Park to Plumstead Road	Near Certain	2017	Link Road to bypass narrow country road and Thorpe End connecting to Plumstead Road	Developer scheme: Planning Approval subject to S106
10	Salhouse Road - Wroxham Road Link Road	Near Certain	2017	New Road through new housing estate Connecting Wroxham Road to Salhouse Road	Developer scheme: approved planning permission
11	Tuckswood Roundabout Improvements, Norwich (Harford Place)	Near Certain	2017	Improvements to the approach of the roundabout and improved crossing facilities (Barrett Road)	Developer scheme: approved planning permission
12	Norwich Research Park Transport Infrastructure	Near Certain	2017	Junction Improvement on B1108/Hethersett Lane junction including signalisation	Developer scheme: approved planning permission
13	Westlegate - removal of straight ahead movement	Near certain	2017	Part of city centre measures to reduce through traffic	Local authority scheme: budgeted and programmed

14	Lenwade to Honingham	More than likely	2017	Improvement scheme to widen carriageway for HGV's	Local authority scheme: phased programme agreed and construction
15	Bus only on All Saints Green	More than likely	2017	Closure of All Saints Green to all general traffic except buses	Local authority scheme: feasible, but not programmed
16	Longwater Interchange Improvements – To mitigate impact of Lodge Farm 2 residential development	More than likely	2017	Free flow slip from A1074 westbound onto A47(T) eastbound and part signalisation of the south dumbbell roundabout	Developer scheme: planning application being assessed
17	Westbound bus lane on approach to Larkman Road, Costessey	Reasonably foreseeable		Improvements to facilitate bus rapid transit on Dereham Road bus corridor	Local authority scheme: investigation instigated without conclusion
18	Westbound bus lane on approach to Norwich Road , Costessey	Reasonably foreseeable		Improvements to facilitate bus rapid transit on Dereham Road bus corridor	Local authority scheme: investigation instigated without conclusion
19	John Lewis car park right turn in and out	Reasonably foreseeable		Car Park entrance changes allowing all movements	Local authority scheme: feasible, but not programmed
20	Thickthorn Roundabout Improvements	Reasonably foreseeable		Feasibility work currently under way	Highways Agency scheme: feasible, but not programmed

21	Eastbound bus lane on Dereham Road bypassing Bowthorpe Roundabout	Reasonably foreseeable		Improvements to facilitate bus rapid transit on Dereham Road bus corridor	Local authority scheme: feasible, but not programmed
22	Westbound bus lane on approach to Outer Ring Road/Dereham Road and junction improvement	Reasonably foreseeable		Improvements to facilitate bus rapid transit on Dereham Road bus corridor	Local authority scheme: feasible, but not programmed
23	Longwater Interchange – large scale improvement	Reasonably foreseeable		Feasibility work currently under way	Local authority scheme: feasible, but not programmed
24	Improvements to the A47(T) trunk road including junctions and dualling	Reasonably foreseeable		Road infrastructure improvements	Highways Agency schemes: feasible, but not programmed
25	Eastbound bus lane on Dereham Road on approach to Longwater Lane junction, Costessey	Reasonably foreseeable		Improvements to facilitate bus rapid transit on Dereham Road bus corridor	Local authority scheme: feasible, but not programmed

Public Transport Network

4.3.6 Table 4.3 shows the public transport schemes identified and the uncertainty of the schemes going ahead. Locations of all the public transport schemes in the uncertainty log are shown in Figure A.2 in Appendix A.

Table 4.3: Uncertainty Log – Factors Affecting Public Transport Study

SI number	Input	Uncertainty	Year	Comment	Status
1	Extension of Postwick Park and Ride site	Near certain	2017	Capacity Improvements	Local authority scheme: has planning permission
2	Increase in frequency on the number of bus routes to reflect a minimum level of service	Reasonably Foreseeable/ Hypothetical	N/A	N/A	N/A
3	Increase frequency of rail services	Reasonably foreseeable/ Hypothetical	N/A	N/A	N/A
4	Norwich Bus Strategy	Hypothetical	N/A	N/A	N/A
5	New station to serve Rackheath Eco-community or relocation of existing Salhouse Station.	Hypothetical	N/A	N/A	N/A
6	New rail halt/station at Broadland Business Park/Dussindale Park	Hypothetical	N/A	N/A	N/A
7	New rail halt/station at Postwick Park and Ride	Hypothetical	N/A	N/A	N/A
8	New Park and Ride site at Trowse	Hypothetical	N/A	N/A	N/A

4.3.7 With the exception of extension of Postwick Park and Ride site, all the other public transport schemes as identified in Table 4.3 were given a reasonably foreseeable or hypothetical uncertainty level, and therefore based on this qualitative assessment these public transport schemes were not included in

the Do-Minimum scenario. However, it must be noted that a number of schemes identified in the highway uncertainty log are focussed on providing bus priority and have been reviewed for inclusion based on their uncertainty level. All changes to the highway network that would impact on public transport were reflected in the public transport networks.

- 4.3.8 Rail services remain the same as in the base year as no schemes were identified following consultation that would have a significant impact on level of service.

4.4 Do Something Network

4.4.1 The Do Something networks consist of a number of elements:

- The Norwich Northern Distributor Road;
- Offline improvement measures; and
- City Centre network improvements.

Norwich Northern Distributor Road

4.4.2 The preferred route option for the NDR is shown in Figure B.1 in Appendix B. The NDR is proposed to commence in the west at a new junction on the A1067 north of Taverham and connect to the A47(T) to the east of Norwich at the Postwick junction. The total length of the proposed NDR is approximately 20.4km. It is of dual two lane carriageway standard for the entire length, with grade separated junctions at the Postwick Hub Junction with the A47(T) and at the A140 Cromer Road junction and at-grade roundabouts with other major radial routes.

4.4.3 Link lengths and planned junction layouts have been taken from the current design drawings. The NDR has been assigned a speed flow curve which corresponds to a D2 dual carriageway rural road.

Offline Improvement Measures

4.4.4 The following schemes are included as part of the NDR scheme and shown in Figure B.3 in Appendix B:

- Wroxham Road/ Green Lane junction improvement;
- North Walsham Road/ Crostwick Lane junction improvement; and
- Thorpe End: Traffic Management as per Parish Plan (two mini-roundabouts and a pedestrian crossing).

4.4.5 There are a number of locations in Norwich that currently experience rat running. In the northern suburbs it is anticipated that the NDR will reduce or remove these problems. It is felt by some that there may be increases in other locations. To assuage these fears, traffic levels at these locations will be monitored and traffic management measures implemented if required.

City Centre Network Improvements

4.4.6 In conjunction with the NDR, complementary traffic management measures are proposed for Norwich city centre, with the aim of discouraging through car trips and reducing the dominance of traffic in certain areas. The following schemes are included:

- Golden Ball Street and Farmers Avenue two-way;
- Removal of general traffic except buses, taxis and cyclists from Red Lion Street;
- Full closure of Westlegate;
- Removal of general traffic except buses, taxis and cyclists from Prince of Wales Road (except eastern section);
- Bus only on Prince of Wales Road and Agricultural Hall Plain; and
- Removal of some non-bus, taxi or cycle through traffic from Tombland – occurs as a consequence of the sum of the other measures.

4.4.7 Figure B.2 in Appendix B shows current proposals, and these have been modelled in the Do Something scenario.

4.5 Change in Travel Costs

- 4.5.1 Changes of travel costs in the opening and forecast years are to be expected due to increases in incomes and the value of time, changes in fuel costs and improvements in vehicle efficiency. Therefore, the cost assumptions of the validated base year models have been updated in the future year assignments.
- 4.5.2 Cost changes have been calculated for each forecast year and are applicable to both the Do Minimum and Do Something scenarios.

Highway Generalised Cost Parameters

- 4.5.3 The highway trip costs are made up of time, distance and charge impacts. The Value Of Time (VOT) and Vehicle Operating Cost (VOC) vary by journey purpose and also vary by forecast year to represent changes in fuel costs and income. Changes in fuel costs, vehicle efficiency and values of time included in WebTAG 3.5.6 issued in October 2012 have been used to calculate forecast year values of time and operating costs. Table 4.4 details the highway generalised cost coefficients used for 2012, 2017 and 2032 in pence per minute (PPM) and pence per kilometre (PPK). The values for cars have additionally been adjusted to take account of the proportion of non-freight LGVs which gives slightly different values for each time period.
- 4.5.4 The PPK values are expected to reduce from the 2017 to the 2032 forecasting year due to fuel efficiency improvements for cars and LGVs.

Table 4.4: 2012, 2017 and 2032 Highway Generalised Cost Coefficients (2010 Prices)

	AM		Inter Peak		PM	
	PPM	PPK	PPM	PPK	PPM	PPK
2012						
Work	12.39	7.51	12.29	7.51	12.10	7.51
Employer Business	53.83	13.74	52.61	13.74	51.85	13.74
Other	15.84	7.51	16.47	7.51	16.92	7.51
Light Goods Vehicles	20.66	15.95	20.66	15.95	20.66	15.95
Other Goods Vehicles	35.85	45.63	35.85	45.63	35.85	45.63
2017						
Work	13.41	7.09	13.30	7.09	13.10	7.09

Public Transport Generalised Cost Parameters

4.5.5 As the generalised journey time (GJT) calculation in the public transport model includes fares, appropriate values of time and fare coefficients are required. VISUM operates in units of generalised time, the fare coefficient is the time equivalent (in minutes) of a £1 fare. The future year generalised times were calculated taking into account the assumed real growth in fares

(presented in section 4.5.8), and future year Values of Time (extracted from WebTAG Unit 3.5.6, October 2012). Table 4.5 shows the future year Value of Time and resultant fare coefficients used for public transport in the base and forecast years.

Table 4.5: Values of Time and Fare Coefficients for PT Assignment (2010 Prices)

User Class	Value of Time (£/hour)			Fare Coefficients (minutes/£)		
	2012	2017	2032	2012	2017	2032
EB-(work)	21.7	23.96	31.32	2.77	2.5	1.92
Commute-(non-work)	6.46	6.99	8.67	9.29	8.58	6.92
Other-(non-work)	5.71	6.18	7.66	10.51	9.7	7.83

Car Parking and Park and Ride Charges

- 4.5.6 Future year parking charges for the main car parks in Norwich have been assumed to increase in real terms in line with the Gross Domestic Product (GDP) growth rates shown in WebTAG 3.5.6, October 2012; this amounts to a compound growth rate of 2% pa to 2032.
- 4.5.7 Similar to the parking charges, Park and Ride charges have been assumed to increase with the GDP growth rates as discussed above.

Public Transport Fares

- 4.5.8 In consultation with the Norfolk County Council, the public transport fare growth calculation for the forecast year models assumed real terms increase in fares as follows, based on local experience:
- Bus: 1.8% per annum; and
 - Rail: 1% per annum.

5 Future Year Traffic Growth

5.1 Requirements

5.1.1 For forecasting purposes, future year demand matrices are required by mode and time period reflecting:

- National traffic growth forecasts; and
- Proposed developments spatially allocated according to the JCS, but growth constrained to national forecasts.

5.1.2 Future year matrices are required for the opening year (2017) and design year (2032). For home based trip purposes, demand matrices are required in 24 hour Production and Attraction (PA) format. For non-home based and freight trip purposes matrices are required for the following time periods:

- AM Peak hour (08:00 – 09:00);
- Average Inter Peak Hour (10:00 – 16:00);
- PM Peak hour (17:00 – 18:00); and
- Average Off Peak Hour (19.00 – 7.00).

5.2 Overview of Process

5.2.1 Two methods have been used to produce future trip levels with the method employed being dependent on geographic location.

5.2.2 For the Norwich, Broadland and South Norfolk areas, the trip generation of proposed developments likely to be completed between 2012 and 2032 has been predicted using the TRICS trip rate database. The trip totals for the combined Norwich, Broadland and South Norfolk area have then been controlled to the growth predicted in the NTEM 6.2 dataset for car trips (all purposes) and for LGV trips (commute and other purposes only). These proposed developments were incorporated into all the forecast matrices.

5.2.3 In the remaining areas of the model, including Breckland, Great Yarmouth, North Norfolk, King's Lynn and West Norfolk, and other areas of the model where the model detail is coarser, NTEM 6.2 growth factors were applied directly to the base year matrices for car trips (all purposes) and LGV trips (commute and other purposes only), with no account taken explicitly for completed developments as the remoteness from the Scheme means that the exact locations of development are not important for the purpose of the scheme appraisal.

5.2.4 Growth factors for employers business trips for Other Goods Vehicles (OGV) and Light Goods Vehicles (LGV) have been calculated using data from the Department for Transport's Road Transport Forecasts for 2013 (RTF13).

5.2.5 The reference case matrices developed specifically for the NDR model were identical for the Do-Minimum and Do-Something scenarios, with the same representation of development and the demand for both scenarios controlled to the same growth forecast from NTEM 6.2 and RTF 2013.

5.3 Developments

5.3.1 Proposed developments in the model area were assessed by NCC on the basis of the likelihood of completion and a set of most likely developments were input into the modelling process for explicit representation. The full list of developments that were included is contained in Appendices C and E and a graphical representation of these developments is shown in Appendices D and F.

5.4 Development Trip Generation

Production of TRICS Trip Rates

5.4.1 The TRICS 2012(b) trip rate database was used to derive average trip generation rates for residential, business and retail development land use types. As there are a large number of proposed developments, using average TRICS rates provides a reasonable estimate of the overall increase in trip generation from the developments. Trip rates were extracted for the following TRICS categories as shown in Table 5.1, below.

Table 5.1: Development Land Use Type and TRICS Category

Development Land Use Type	TRICS Category
Residential	03A Residential - Houses Privately Owned
B1 Business	02B Employment - Business Park
B2 Business	02D Employment - Industrial Estate
B8 Business	02F Employment - Warehousing

5.4.2 For all TRICS categories that were interrogated, only sites with multimodal surveys were selected so that multi-modal splits could be derived. Average trip rates were calculated for the following time periods:

- AM peak hour (08:00 – 09:00);
- Average inter-peak hour (Average hourly flow for 10:00 – 16:00);
- PM peak hour (17:00 – 18:00); and
- 12 hour total (07:00 – 19:00).

5.4.3 Selections were based on all available data between 01/01/2004 and 18/11/2011 for all locations in the dataset excluding London and Ireland. Trip rates were calculated for weekdays only, for the 12 hour period 07:00 to 19:00. Modal splits were derived for each land use type for the entire period of the surveys and applied to the trip rates for all vehicles for each time period. Key steps in building the matrices are described below.

Conversion of TRICS Vehicular Trip Rates to Trip Rates by Model Purpose

5.4.4 The TRICS vehicular trip rates, shown in the tables above, required conversion to the purposes used in the demand and assignment models. In addition, for the home-based production attraction purposes, trip rates were required for a 24 hour period. Use of CTripend data facilitated the production of trip rates in the required formats; CTripend is Department for Transport software.

Splitting of Trip Rates by Purpose

5.4.5 CTripend output data, available at zone level, was used to split the calculated vehicular TRICS trip rates into trip rates by purpose. The extracted data contains trip ends by time period, mode and journey purpose. The most appropriate existing zones were selected by land-use type using local knowledge to represent the built development, as follows:

- Residential – Zone 8 (Thorpe Mariott);
- Retail – Zone 8 (Riverside Retail Park); and
- Business – Zone 121 (Sweet Briar Industrial Estate) and Zone 349 (Broadland Business Park).

5.4.6 Trip purpose proportions were then calculated for these areas and used to split the trip rates from TRICS into purposes, so that the development trip generation could be added into the user classes of the model.

Splitting of Trip Rates by Mode

5.4.7 Multimodal surveys for each TRICS category were used to produce modal splits between car, public transport, LGV and HGV for each development land-use type.

5.4.8 An average was calculated for each land-use using all of the surveys available which had full multi-modal splits for the complete survey day.

5.4.9 Further splitting of the public transport trip rates into bus and rail trip rates was achieved using CTripend data for each land use type to find the proportions of trip-ends at zones appropriately matching each land-use type.

Controlling to NTEM and RTF

5.4.10 The forecasts are controlled to NTEM and RTF. This is explained in section 5.9.

Adjustment for Travel Planning and Distribution

5.4.11 It is considered that the impact of travel planning will have the effect of reducing vehicle trip generation at the proposed developments. To model this effect, an 11% reduction to the vehicle trip generation predicted by TRICS has been made to car trips. This is taken from the Department for Transport's documents 'Making Residential Travel Plans Work' (2007) and Making Personal Travel Planning Work: A practitioners' Guide (2008). This reduction is consistent with the reduction accepted by NCC development control for the Beyond Green development at North Spowston and Old Catton, and it is within the range suggested in WebTAG Unit 3.10.6.

5.4.12 For the Rackheath Eco Town and Beyond Green developments a pragmatic approach was adopted to account for the reduced vehicular trip generation that would be likely to occur at these developments when compared with more typical sites found in TRICS. A 30% reduction to the vehicular trip generation was made for these two sites, which represents the 'internalisation'

of the trip generation within each respective site. This is consistent with the assumed reduction that has been accepted by NCC development control for the Beyond Green development at North Spowston and Old Catton.

- 5.4.13 It should be noted that the reductions to development trips to take account of travel planning and for the different nature of the Rackheath Eco Town and of the Beyond Green developments were made after the constraint to NTEM was achieved. Therefore, the growth in reference case highway trips from the base year to the forecast years will be less than that predicted by NTEM.
- 5.4.14 The outturn vehicle trip rates for each time period and land use (see paragraph 5.4.11) are shown below in Table 5.2 to Table 5.9. The car trip rates allow for an 11% reduction to account for travel plans. Full TRICS outputs are attached at Appendix G (these are the trip rates directly from TRICS prior to the adjustment).

5.5 Development at Broadland Gate

- 5.5.1 Due to the location and considerable size of the proposed Broadland Gate development, modelling of this development was carried out using a different methodology to that used for the other proposed developments.
- 5.5.2 As with the other developments, average TRICS trip rates have been used to calculate the trip generation, however, special attention has been afforded to this development to ensure that the inbound and outbound generated trips were consistent between the assignment models and those predicted by TRICS. Due to the 24 hour format of the Home Based Work, Home Base Employers Business and Home Based Other user classes, this was completed by preparing bespoke DIADEM time period factors for this development.
- 5.5.3 The peak hour trip generation for the Broadland Gate development was based upon the following development quantum taken from the Broadland Gate Transport Assessment.

Table 5.10: Broadland Gate Development Quantum

Land Use	Development Quantum	TRICS Category
B1/ B2/ B8	42,000 sqm	02B Employment – Business Park 02D Employment – Industrial Estate 02F Employment – Warehousing
Hotel	120 beds	06A Hotels Food & Drink – Hotels
Leisure Club	1,890 sqm	07K Leisure – Fitness Club (Private)
Residential Apartments	75 no.	03C Residential – Flats Privately Owned
Medical Facility	3,150 sqm	05B Health – General Hospital Without Casualty
Ancillary Retail	2,400 sqm	01G Retail – Other Individual Non-Food Superstore
Car Showroom	1,208 sqm	14A Car Show Rooms – Car Show Rooms
Pub/ Restaurant	1,575 sqm	06C Hotels Food & Drink – Pub/ Restaurant
Nursery	420 sqm	04D Education – Nursery

5.5.4 In consultation with NCC, it has been assumed that 10% of the development will be completed and occupied by 2017 and that it will be fully completed and occupied by 2032.

5.5.5 Average TRICS trip rates have been used for the development with an 11% reduction for travel plans (as described in Paragraph 5.4.11) and are shown in Table 5.11 and Table 5.12. Full TRICS outputs are attached at Appendix G.

Table 5.11: Average TRICS Business Trip Rates (Vehicle Trips per 100sqm)

Land Use	AM Peak (8:00-9:00)		Inter Peak (10:00-16:00)		PM Peak (17:00-18:00)	
	IN	OUT	IN	OUT	IN	OUT
B1	1.313	0.247	0.278	0.309	0.163	1.070

Table 5.12: Average TRICS Residential Trip Rates (Vehicle Trips per Dwelling / 100sqm)

Land Use	AM Peak (8:00-9:00)		Inter Peak (10:00-16:00)		PM Peak (17:00-18:00)	
	IN	OUT	IN	OUT	IN	OUT
Hotel with integrated conference and leisure facilities	0.153	0.194	0.089	0.091	0.153	0.135
Residential	0.070	0.261	0.084	0.082	0.242	0.113
Leisure Club / Swimming Pool	0.468	0.737	0.617	0.622	1.588	0.861
Medical Facility	1.061	0.339	0.633	0.683	0.150	0.470
Ancillary Retail	0.306	0.157	2.108	2.036	1.342	1.425
Car Show room	0.750	0.279	0.505	0.506	0.253	0.628
Pub / Restaurant	0.000	0.000	1.364	1.209	2.522	1.917
Nursery	4.167	3.577	0.908	0.938	2.637	2.935

5.5.6 The trip generation rates shown above were applied to the development quantum for the development shown in Table 5.10 resulting in the trip generation shown in Table 5.13.

Table 5.13: Broadland Gate Generated Trips (Vehicles)

	AM Peak (8:00-9:00)		Inter Peak (10:00-16:00)		PM Peak (17:00-18:00)	
	IN	OUT	IN	OUT	IN	OUT
Trips	644	191	246	256	224	583

5.6 Trip Distribution

5.6.1 The gravity model developed during the construction of the base year model was used to distribute development generated trips. The gravity model was given the following inputs:

- Origin/Production or Destination/Attraction development generated trips by purpose for each zone;
- Row or Column totals from base matrix including development;
- Concentration parameter for appropriate purpose; and
- Trip lengths by mode.

5.6.2 Trip length skims from the base year model were used. Analysis has been carried out using skims from the forecast models to confirm that the forecast trip lengths are broadly consistent with the base year trip lengths.

Concentration Parameters

5.6.3 In the context of trip distribution modelling, concentration defines how spread out (or concentrated) the two ends of a trip are, with a strongly negative concentration parameter indicating a relatively concentrated distance between the two trip ends and therefore trip length and a weakly negative or positive concentration parameter indicating trip ends that relatively spread out with a longer trip length. The concentration parameters were taken from the calibrated trip distribution models. For the home based other and non-home based other purposes the concentration parameters were split into several sub-purposes, namely education, personal business, recreational, shopping and visiting friends.

5.6.4 Weighted average concentration parameters for home based other and non-home based other purposes were calculated using trip-ends split by the named sub-purposes from CTripend as the weightings. A summary of the concentration parameters used in the gravity model is shown in Table 5.14.

Table 5.14: Concentration Parameters (Value relate to trip distance in metres)

Mode	Home Based Work	Home Based Employers Business	Home Based Other	Non-Home Based Employers Business	Non-Home Based Other	LGV	HGV
Highway	-0.00012	-0.00005	-0.00032	-0.00005	-0.00022	-0.00004	-0.00003
Bus	-0.00085	-0.00071	-0.00094	-0.00068	-0.00079	N/A	N/A
Rail	-0.000814	-0.00068	-0.00091	-0.00062	0.00001	N/A	N/A

5.6.5 The concentration parameters shown above in Table 5.14 show that distributed car trips are likely to be more spread out than distributed trips by rail and bus, with LGV and HGV trips being even more spread out.

5.7 NTEM 6.2 Growth

- 5.7.1 NTEM 6.2 growth factors were extracted using TEMPRO by mode, purpose and time period and then applied to existing traffic patterns in order to calculate the overall NTEM 6.2 growth constraints.
- 5.7.2 Growth factors have been extracted using TEMPRO software for all NTEM zones in the study area. Growth factors for key TEMPRO / NTEM zones for home based trips are presented in Table 5.15 to Table 5.17.

5.8 Freight Growth

5.8.1 Freight growth factors have been extracted from RTF 2013 as shown in Table 5.18. The values for the East of England were used. As the NATS model has a single OGV matrix, a weighted average of rigid and articulated HGV growth rates were applied based on the RTF 2013 proportional split

Table 5.18: 2013 Road Transport Forecasts – Growth Factors

Vehicle type	East of England	
	2012-2017	2012-2032
LGV	1.096	1.545
OGV - Rigid	0.989	1.075
OGV - Artic	1.057	1.343
OGV (combined)	1.018	1.190

5.9 Derivation of 2017 and 2032 Reference Case Trip Matrices

5.9.1 The methodology is explained in the sections below. This same methodology is used for all modes, journey purposes, time periods, and is applied to both matrix formats i.e. Production and Attraction matrices; and Origin and Destination matrices.

Step 1 - Apply national forecast growth and determine NTEM zone constraints

5.9.2 NTEM 6.2 growth factors were applied to the 2012 base year matrices using a doubly constrained Furness. The Furness takes as input a set of column and row growth factors calculated for each zone in the model. It uses an iterative technique to produce a forecast matrix with each zone displaying a close match between the input tripend growth factor and the implied output tripend growth for both rows and columns. When using this process to growth matrices based on trip end growth factors, it is normal for there to be a very small imbalance between the output growth in the rows and the output growth in the columns when compared to the input growth factors after a number of loops of the furness. It is therefore necessary to adjust the matrix afterwards to match the overall growth factors for the rows, the growth factors for the columns or to for an average of the two. The matrices have been controlled to the average of the rows and the columns.

5.9.3 For LGV and HGV user classes, regional growth factors were calculated using observed and forecast journey distances presented in the Department for Transport's Road Transport Forecast 2013 data. The calculated factors were applied to all trips using a simple matrix factor.

5.9.4 The calculated forecast matrices were then converted to NTEM zone level matrices to obtain their trip end totals so that these can be used as constraints in subsequent steps.

Step 2 - Calculate Trip-ends for Development Zones

5.9.5 For zones with development, development trips were calculated by applying the relevant trip rates to the identified quantum of development.

Step 3: Calculate Trip Distribution for Development Zones

5.9.6 For each development zone, trip distribution by trip purpose was calculated by applying the gravity models developed during the development of the base year model. NTEM growth was not applied to the development generated trips.

Step 4: Create Prior Matrices

5.9.7 The outputs from Step 3 (development matrices) were combined with the 2012 base year matrices to create overall prior matrices. Matrix totals at NTEM zone level were also calculated.

Step 5: Create Constrained Reference Demand Matrices

5.9.8 Trip end totals at NTEM zone level for the prior matrices (Step 4) and NTEM growth only matrices (Step 1) were compared and adjustment factors were calculated. The adjustment factors were applied to the prior matrices but were calculated so as to adjust only the factored base year traffic patterns (Step 1) and not the development trip generation (from Step 3). This results in the production of the final reference case matrices constrained to NTEM.

5.9.9 The above process is applicable to the 2017 and 2032 matrices. Therefore, the 2017 and 2032 matrices contain development trips, but also with the inclusion of a constraint to NTEM 6.2 at NTEM zone level.

5.10 Forecast Reference Demand

5.10.1 The forecast reference demand developed using the above process is presented below.

5.10.2 Future year Reference Case estimates of Home Based (HB) highway trips in 24 hour Production and Attraction (PA) format are presented in Table 5.19. The 24 hour PA trip numbers represent a summation of fixed and variable trips. The growth for HB other trips is higher than for HB work and employers business trips.

5.10.3 Table 5.20 to Table 5.22 present future year Reference Case non-home based trips in Origin to Destination (OD) format, segmented by assignment user class, for the respective AM, IP and PM modelled time periods.

5.10.4 The growth in non-home based trips from base year to the future year of 2017 is estimated to be around 6% to 7%, while 2032 is forecast to be around 16% to 23%.

5.10.5 In terms of freight, OGVs are forecast to grow at 2% up to 2017, and 19% up to 2032. LGV trips are forecast to increase by 10% from base year to 2017 and by 55% from base year to 2032.

5.11 Constraint to NTEM 6.2

5.11.1 In accordance with Department for Transport guidance set out in WebTAG 3.15.1 demand matrices have been constrained to NTEM 6.2 at NTEM sector level. The use of NTEM allows consistency between different parts of the country when justifying transport proposals. However the reference trip totals have been adjusted due to the assumptions used on travel planning and for the internalisation of trips at the Rackheath Eco Town and Beyond Green sites.

5.11.2 Appendix H provides a summary of demand by geographical sectors for home based purposes. This includes 2012 base demand then future year demand levels which are shown for the application of only NTEM growth, the development trips and then the combined demand in which the NTEM growth is adjusted to make allowance for the development trips. This is shown for the two forecast years 2017 and 2032. For a number of the sectors the forecast growth is taken directly from NTEM but for the more local zones, especially Broadland, Norwich and South Norfolk, there is a contribution derived from development that has been built and spatially allocated.

5.11.3 Taking the Table H.1 in Appendix H as an example it shows that Broadland, Norwich and South Norfolk TEMPRO sector 2012 base year productions of 52,046 grow to 55,192 with the application of NTEM growth to 2017, and to 61,554 by 2032. Development productions are estimated at 5,910, and 22,396 in the two forecast years and these have been added, but then the

total growth is controlled to NTEM as shown in the combined column. The figures in the reference column match exactly the NTEM growth thus showing that the constraint has been correctly applied.

6 Variable Demand Traffic Forecasts

6.1 Overview

6.1.1 The modelling framework has been used to determine variable demand forecasts for the Do Minimum and Do Something scenarios, defined as follows:

- Do-Minimum - without the proposed transport intervention; and
- Do-Something - with the proposed transport intervention and associated improvements as well as city centre transport management measures.

6.1.2 The demand model parameters were adjusted in accordance with WebTAG guidance to make sure that realistic elasticity of demand to cost change is produced by the model. The demand model was run to convergence and the convergence statistics checked against WebTAG targets to make sure that a stable model at equilibrium has been produced. The effects of the demand modelling on the reference forecasts have been assessed. The following sections describe the analyses undertaken.

6.2 Demand Model Realism Testing

6.2.1 Realism testing was undertaken on the base-year demand model in accordance with WebTAG 3.10.4.

6.2.2 Two new sets of variants of the generalised cost coefficient files have been created. These contain the generalised cost with a rise in fuel prices.

Fuel Cost Elasticity

6.2.3 The demand model was run with a 10% fuel cost increases. This increase was reflected in the model by revised assignment generalised costs in the SATURN networks.

6.2.4 The fuel-cost elasticity tests began with WebTAG median parameters and two further tests were run until the final parameters were reached. The final calibrated demand model parameters and outturn elasticities are shown in Table 6.1 and Table 6.2 respectively. The parameters used are within the range suggested in WebTAG 3.10.4 and are thus considered to provide reasonable variable demand response to changes in travel costs.

Table 6.1: Calibrated Demand Model Parameters

Purpose and Mode	WebTAG			NDR Model
	Minimum	Median	Maximum	
Car				
HBW	0.054	0.065	0.113	0.113

NHBO	0.073	0.077	0.105	0.073

Table 6.2: Outturn Elasticities

Purpose	NDR Elasticity	WebTAG Targets
Work	-0.18	-0.30
EB	-0.15	-0.10
Other	-0.53	-0.40
Total	-0.39	-0.30

6.3 Convergence

6.3.1 One requirement for robust forecasting is that iterative demand and assignment models are well converged. The demand and assignment model convergence statistics are shown in Table 6.3.

6.3.2 The demand model convergence ‘gap’ statistics are between 0.06% and 0.10% for the forecast model scenarios which are below the WebTAG target of 0.2% (values lower than this target means that the model is better converged). This shows that the demand model has converged acceptably well.

6.3.3 Similarly, for all time period models, forecasting years and scenarios, the assignment model convergence ‘gap’ is below the recommended WebTAG value of 0.1% by a substantial margin, generally about ten times less than the target (values lower than this target means that the model is better converged). The measurements of flow and cost changes also exceed the

98% target in all cases (in these cases values higher than the target show that the model is better converged).

- 6.3.4 The 'gap' measures the proximity to an equilibrium solution for the iterative assignment process and the flow and cost changes measure the stability of the solution from one iteration to another. The above shows that the demand model and the assignment model compare very well with the WebTAG targets and it is considered that all of the model runs are well converged

Table 6.3: Convergence Parameters

Time Period	2017				2032			
	Demand model Gap (Target = 0.2%)	Assignment model Gap (Target = 0.1%)	Assignment model % Flows (Target = 98%)	Assignment model % Costs (Target = 98%)	Demand model Gap (Target = 0.2%)	Assignment model Gap (Target= 0.1%)	Assignment model % Flows (Target = 98%)	Assignment model % Costs (Target = 98%)
Do-Minimum - Scenario A	0.06	N/A			0.10	N/A		
AM	-	0.036	99.7	99.5	-	0.0018	99.6	99.6
IP	-	0.0014	99.8	99.8	-	0.0014	99.8	99.7
PM	-	0.0043	99.4	99.6	-	0.0030	99.3	99.5
OP	-	0	100	100	-	0	99.6	100
Do-Something - Scenario C	0.10	N/A			0.08	N/A		
AM	-	0.0037	98.4	99.2	-	0.0033	99.8	99.8
IP	-	0.00070	99.7	99.9	-	0.0010	99.8	99.8
PM	-	0.0041	99.6	99.5	-	0.0040	99.6	99.4
OP	-	0	100	100	-	0	99.6	100

6.4 Do-Minimum Demand Forecast

- 6.4.1 The Do-Minimum forecasts of highway demand for home based purposes compared with the reference case are presented in Table 6.4, for the 24 hour PA variable trips. It must be noted that the analysis in Table 6.4 only considers the change in variable HB trips, and does not include the fixed trip element. Therefore a direct comparison cannot be made to Table 5.19, which presents a summation of both fixed and variable trips.
- 6.4.2 The 24 hour PA comparison (variable trips only) shows that there are very small changes in the home-based highway trip numbers between the Reference Case and the Do Minimum scenario for all forecasting years.

Table 6.4: Do Minimum 24 Hour PA Highway Demand (Variable Trips Only)

Purpose	2017				2032			
	Reference Case	Do Minimum	Absolute Change	% Change	Reference Case	Do Minimum	Absolute Change	% Change
HBW	66,863	66,880	17	0.0%	68,373	68,458	85	0.1%
HBEB	12,229	12,233	4	0.0%	12,856	12,869	13	0.1%
HBO	141,323	141,778	455	0.3%	165,782	168,338	2556	1.5%

6.4.3 The demand model uses a fifteen demand segment setup, disaggregating home based and non-home based trips and also trips that are subject to variable demand modelling changes and those that are not. In order to make the modelling process more efficient, these demand segments are converted into seven user classes for assignment purposes. The private vehicle user class demand from the assignment set up compared with the reference case is reported in Table 6.5 to Table 6.7 for the Do Minimum and Table 6.9 to Table 6.11 for the Do Something.

6.4.4 Table 6.5 to Table 6.7 show a comparison between reference case and Do Minimum future year demand trips (both fixed and variable demand in OD format), for the respective AM, IP and PM peak hours. From the comparison of these it is evident that there are minimal changes in the trip numbers in the AM, inter and PM peaks as a results of the application of variable demand.

6.5 Do Something Demand Forecasts

6.5.1 Forecasts of HB highway trip demand (24 hour PA format) for the Do Something scenario compared with the reference case scenario are shown in Table 6.8. It must be noted that the 24 hour PA comparison only compares the change in variable trips from Reference to Do Something scenario. From comparison to the Reference scenario, it can be noticed that the relative change in HB trips is very small for all forecast years.

Table 6.8: Do Something Highway Demand – 24 Hour PA (Variable Trips Only)

Purpose	2017				2032			
	Reference Case	Do Something	Absolute Change	% Change	Reference Case	Do Something	Absolute Change	% Change

HBEB	12,229	12,233	4	0.0%	12,856	12,869	14	0.1%
HBO	141,323	142,212	889	0.6%	165,782	168,700	2918	1.8%

6.5.2 Table 6.9 to Table 6.11 show Do Something future year demand trips (both fixed and variable demand in OD format) compared with the reference case, for the respective AM, IP and PM peak hours. From the comparison of these it is evident that there are only very minimal changes in trip numbers across all trip purposes and time periods.

7 Network Performance

7.1 Traffic Impact

7.1.1 The forecast traffic flows on the NDR and the surrounding area are shown in Figures I.1 and I.2 in Appendix I. Traffic flows at Wensum Valley section of the network are shown in Figure I.3. Locations in this area have been selected to indicate traffic movements between the A47(T) and the A1067. These show the AADT traffic flows for the different forecast scenarios. The traffic flows for these scenarios for each time period is shown in Tables I.1 to I.5 in Appendix I. The following sections describe key changes in traffic flows at AADT level on the network.

Strategic traffic movements
